SAMPLE REGISTRATION SYSTEM STATISTICAL REPORT 2022

OFFICE OF THE REGISTRAR GENERAL &
CENSUS COMMISSIONER, INDIA
MINISTRY OF HOME AFFAIRS
GOVERNMENT OF INDIA
NEW DELHI

P R E F A C E

The Sample Registration System (SRS) Statistical Report 2022 contains estimates of various demographic, fertility and mortality indicators based on the data collected through the SRS sample survey. SRS in India is one of the largest demographic surveys in the world covering about 8.7 million sample population. It is carried out by the Office of Registrar General & Census Commissioner, India with an objective of providing reliable annual estimates of Birth Rate, Death Rate, Infant Mortality Rate and various other fertility and mortality indicators. SRS has been serving as the main source of information on fertility and mortality at the State and National levels, from 1971 onwards.

2. The SRS Statistical Report includes data on population composition by broad age groups, sex and marital status. Various fertility indicators like Crude Birth Rate, Total Fertility Rate, Age-Specific Fertility Rate, General Fertility Rate, Mean Age of Fertility and many more are also estimated under SRS. All these indicators have been included in this report. Further, this report also contains estimates of indicators like Crude Death Rate, Infant Mortality Rate, Under-Five Mortality Rate, Age-Specific Death Rate, Neo-natal Mortality Rate etc. which provide significant information on mortality. Certain other indicators of demographic interest such as mean age at effective marriage for females, interval between current and previous live birth and also distribution of live births by birth order have continued to form part of the SRS report. The sex ratio at birth has also been estimated in this Report as in the past. The indicators in this report are brought out for India and bigger States/UTs (with population of 10 million and above) separately for rural and urban areas. Considering the demand from users the additional indicator of Survival to Age 5 has also been included in the report from this year.

3. This report has been prepared by the officials of the SRS wing of VS Division led by Ms. Salini V K, Deputy Registrar General under the guidance of Sh. Sanjeev Kumar, Additional Registrar General. In particular, I wish to place on record the efforts put in by Ms. Salini V K, Deputy Registrar General, Ms. Preeti Tiwari, Senior Research Officer, Sh. Abhay Kumar, Assistant Director and Sh. Ravi Kant, SI Gr. I in bringing out this publication. This study has been made possible with the active involvement of staff and officers of the Directorates of Census Operations, SRS Wing of the Vital Statistics Division, IT Division and Map Division at the headquarters. I am thankful to all of them for their efforts and support.

New Delhi
June, 2025

(Mritunjay Kumar Narayan)
Registrar General & Census Commissioner of India

Definitions	xvii-xviii
Figures at a Glance, India – 2022	xix-xxi
National level trends for few core indicators 2017-22	xxii
Executive Summary	xxiii-xxiv
Map - Birth Rate by NSS Natural Division, 2022	xxv
Map - Death Rate by NSS Natural Division, 2022	xxvi
Map - Infant Mortality Rate by NSS Natural Division, 2022	xxvii
Chapter 1- Introduction	1-11
Chapter 2 - Population Composition	13-56
Chapter 3 - Estimates of Fertility Indicators	57-125
Chapter 4 - Estimates of Mortality Indicators	127-191

Detailed Tables

1.	Percentage distribution of estimated population by age-group, Sex and Residence, 2022	193-204
2.	Percentage distribution of population by Sex, Marital Status and Age-group, 2022	205-227
3.	Fertility Indicators, 2022	228-234
4.	Fertility indicators by Level of Education of Women, 2022	235-257
5.	Percentage distribution of live births by Order of Birth, 2022	258-263
6.	Percentage distribution of current live births by Birth Interval, 2022	264-265
7.	Percentage distribution of current live births by Birth Interval and Birth Order, 2022	266-271
8.	Age-Specific Death Rate by Sex and Residence, 2022	272-294
9.	Child (Aged 0-4 years) and Infant Mortality Indicators, 2022	272-294
10.	Percentage distribution of deaths to total deaths by Residence, Sex and Age-group, 2022	295-306
11.	Birth Rate, Death Rate and Infant Mortality Rate by NSS Natural Division, 2022	307-309

Tables on Trend

12.	Annual estimates of Birth Rate by Residence, India and bigger States/UTs, 2017-22	311
13.	Annual estimates of Death Rate by Sex, India and bigger States/UTs, 2017-22	312
14.	Annual estimates of Infant Mortality Rate by Sex, India and bigger States/UTs, 2017-22	313
15.	Annual estimates of Total Fertility Rate by Residence, India and bigger States/UTs, 2017-22	314
16.	Sex Ratio at Birth (female per 1000 male) by Residence, India and bigger States/UTs, 2016-18 to 2020-22	315
17.	Percent of live births where the mothers received medical attention at delivery either at Government hospitals or at Private hospitals, India and bigger States/UTs, 2017-22	316
18.	Percent of deaths where medical attention received before death was either at Government hospitals or at Private hospitals, India and bigger States/UTs, 2017-22	317

LIST OF STATEMENTS

		Page
General		
1	Number of Sample Units at different replacement period	2
2	Number of Sample Units and population covered, India, States and Union Territories, 2022	6
Population Composition		
3	Percentage distribution of population by broad age groups, Sex and Residence, India, 2022	14
4	Percentage of population in the age group 0-4 years by Sex and Residence, India and bigger States/UTs, 2022	18
5	Percentage of population in the age group 0-14 years by Sex and Residence, India and bigger States/UTs, 2022	21
6	Percentage of population in the age group 15-59 years by Sex and Residence, India and bigger States/UTs, 2022	24
7	Percentage of population in the age group 60 years and above to total population by Sex and Residence, India and bigger States/UTs, 2022	28
8	Percentage distribution of population by Marital Status and Sex, India and bigger States/UTs, 2022	31
9	Percentage distribution of population aged 10+ by Marital Status and Sex, India and bigger States/UTs, 2022	36
10	Percentage distribution of females aged 10+ by Marital Status and Residence, India and bigger States/UTs, 2022	40
11	Percentage distribution of females aged 15+ by Marital Status and Residence, India and bigger States/UTs, 2022	43
12	Percentage of females by age at effective marriage and by Residence, India and bigger States/UTs, 2022	48
13	Mean age at effective marriage of females by Residence, India and bigger States/UTs, 2022	53

Fertility Indicators

		Page
14	CBR (Crude Birth Rate) by Residence, India and States/UTs, 2022	58
15	Percentage change in average Crude Birth Rate between 2010-12 and 2020-22 by Residence, India and bigger States/UTs	61
16	Sex Ratio (female per 1000 male) at Birth by Residence, India and bigger States/UTs, 2020-22	66
17	GFR (General Fertility Rate) by Residence, India and bigger States/UTs, 2022	68
18	Percentage change in average GFR (General Fertility Rate) between 2010-12 and 2020-22 by Residence, India and bigger States/UTs	72
19	ASFRs (Age-Specific Fertility Rates) by Residence, India, 2022	77
20	Percentage change in Age-Specific Fertility Rates by Residence between 2010-12 and 2020-22, India	78
21	ASFRs (Age-Specific Fertility Rates), India and bigger States/UTs, 2022	80
22	Percentage distribution of cumulative fertility by age group, India and bigger States/UTs, 2022	81
23	Mean age of Fertility and associated Standard Deviation, India and bigger States/UTs, 2022	83
24	TFR (Total Fertility Rate) by Residence, India and bigger States/UTs, 2022	85
25	Percentage change in average TFR (Total Fertility Rate) between 2010-12 and 2020-22 by Residence, India and bigger States/UTs	88
26	GRR (Gross Reproduction Rate) by Residence, India and bigger States/UTs, 2022	93

28	ASMFR (Age-Specific Marital Fertility Rate) India and bigger States/UTs, 2022	96
29	TMFR (Total Marital Fertility Rate) by Residence, India and bigger States/UTs, 2022	97

		Page
30	Percentage change in average Total Marital Fertility rate (TMFR) between 2010-12 and 2020-22 by Residence, India and bigger States/UTs	99
31	Percentage of female population in the age group 15-49 by Level of Education, India and bigger States/UTs, 2022	103
32	GFR (General Fertility Rate) by Level of Education of Women, India and bigger States/UTs, 2022	104
33	ASFR (Age-Specific Fertility Rate) by Level of Education of Women and Residence, India, 2022	105
34	TFR (Total Fertility Rate) by Level of Education of Women, India and bigger States/UTs, 2022	109
35	Percentage distribution of current live births by Birth Order, India and bigger States/UTs, 2022	111
36	Percentage distribution of current live births by Birth Order and Residence, India and bigger States/UTs, 2022	113
37	Percentage distribution of second and higher order live births by Interval, India and bigger States/UTs, 2022	116
38	Percentage distribution of second and higher order live births by Interval and Residence, India and bigger States/UTs, 2022	118
39	Percentage distribution of live births by Type of Medical Attention received by the mother at delivery by Residence, India and bigger States/UTs, 2022	122

Mortality Indicators

40	CDR (Crude Death Rate) by Residence, India and States/UTs, 2022	128
41	Average Crude Death Rate and percentage change between 2010-11 and 2020-22, by Residence, India and bigger States/UTs	131
42	CDR (Crude Death Rate) by Sex and Residence, India, 2022	136
43	CDR (Crude Death Rate) by Sex, India and bigger States/UTs, 2022	137
44	Percentage distribution of deaths by broad age groups, India and bigger States/UTs, 2022	139
45	Percentage of Infant Deaths to total deaths by Residence, India and bigger States/UTs, 2022	141

		Page
46	IMR (Infant Mortality Rate) by Sex and Residence, India and States/UTs, 2022	143
47	Average IMR (Infant Mortality Rate) and percentage change between 2010-12 and 2020-22 by Residence, India and bigger States/UTs	148
48	Neo-natal Mortality Rate and percentage share of neo-natal deaths to infant deaths by Residence, India and bigger States/UTs, 2022	152
49	Early Neo-natal Mortality Rate and percentage share of early neo-natal deaths to infant deaths by Residence, India and bigger States/UTs, 2022	156
50	Peri-natal Mortality Rate and Still Birth Rate by Residence, India and bigger States/UTs, 2022	160
51	Percentage of deaths in the age group 0-4 years to total deaths by Residence, India and bigger States/UTs, 2022	163
52	Estimated death rate for children age 0-4 years by Sex and Residence, India and bigger States/UTs, 2022	165
53	Under-5 Mortality Rate by Sex and Residence, India and bigger States/UTs, 2022	169
54	Probability of Survival to Age-5 by Sex and Residence, India and bigger States/UTs, 2022	173
55	Death Rate for children aged 5-14 years by Sex and Residence, India and bigger States/UTs, 2022	174
56	Death Rate for persons aged 15-59 years by Sex and Residence, India and bigger States/UTs, 2022	178
57	Adult Survival Rate by Sex and Residence, India and bigger States/UTs, 2022	182
58	Death Rate for persons aged 60 years and above by Sex and Residence, India and bigger States/UTs, 2022	183
59	Percentage distribution of deaths by Type of Medical Attention received before death by Residence, India and bigger States/UTs, 2022	188

D E F I N I T I O N S

$$\text{Crude Birth Rate (CBR)} = \frac{\text{Number of live births during the year}}{\text{Mid-year population}} \times 1000$$

$$\text{Age-Specific Fertility Rate (ASFR)} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

$$\text{General Fertility Rate (GFR)} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1000$$

$$\text{Total Fertility Rate (TFR)} = \frac{5 \times \sum_{15\text{-}19}^{45\text{-}49} \text{ASFR}}{1000}$$

$$\text{Gross Reproduction Rate (GRR)} = \frac{5 \times \sum_{15\text{-}19}^{45\text{-}49} \text{ASFR for female live births}}{1000}$$

$$\text{Age-Specific Marital Fertility Rate (ASMFR)} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1000$$

$$\text{General Marital Fertility Rate (GMFR)} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) year}} \times 1000$$

$$\text{Total Marital Fertility Rate (TMFR)} = \frac{5 \times \sum_{15\text{-}19}^{45\text{-}49} \text{ASMFR}}{1000}$$

$$\text{Crude Death Rate (CDR)} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

Age-Specific Mortality Rate (ASMR) = $\frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1000$

Under-five Mortality Rate = The Under-Five Mortality is the probability (${}_5q_0$) that a child born in a specific year or time period will die before reaching the age of five, subject to current Age-Specific Mortality Rates. It is expressed as a rate per 1,000 live births.

Infant Mortality Rate (IMR) = $\frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$

Infant Mortality Rate comprises of two parts viz. Neo-natal Mortality Rate and Post Neo-natal Mortality Rate. The Neo-natal Mortality Rate also comprises of two parts viz. Early Neo-natal Mortality Rate and late Neo-natal Mortality Rate. These are defined as:

Neo-natal Mortality Rate (NMR) = $\frac{\text{Number of infant deaths of < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$

Early Neo-natal Mortality Rate = $\frac{\text{Number of infant deaths of < than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$

Late Neo-natal Mortality Rate = $\frac{\text{Number of infant deaths of 7 days to < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$

Post Neo-natal Mortality Rate (PNMR) = $\frac{\text{Number of infant deaths of 29 days to < than one year during the year}}{\text{Number of live births during the year}} \times 1000$

Peri-natal Mortality Rate (PMR) = $\frac{\text{Number of still births and infant deaths of < than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$

Still Birth Rate (SBR) = $\frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$

FIGURES AT A GLANCE, INDIA - 2022

Trend of Birth rate, Death rate, Infant Mortality rate, Total Fertility rate and Sex ratio at Birth, India

EXECUTIVE SUMMARY

The Sample Registration System (SRS) is the largest demographic survey in the Country mandated to provide annual estimates of fertility as well as mortality indicators at the State and National level. The present Report contains data on fertility and mortality indicators for the year 2022 for India and bigger States/UTs. The estimates are segregated by residence and also by gender, wherever required.

2. The salient features of the report are as summarized below.

- The Crude Birth Rate (CBR) at the National level during 2022 stands at 19.1 exhibiting a decline of 0.2 points over 2021. Among the bigger States/UTs, the maximum CBR has been reported in Bihar (26.9) and the minimum in Tamil Nadu (12.1).

- There has been a decline of 1.1 points in the CBR for the Country from 2017 to 2022. The corresponding decline in rural CBR is 1.0 points and in urban CBR 1.3 points.

- The Crude Death Rate (CDR) for the Country is 6.8 in 2022. Among the bigger States/UTs, the maximum CDR has been reported for Chhattisgarh (9.0) and the minimum for Delhi (4.6).

- The Infant Mortality Rate (IMR) has also registered 1-point decline to 26 in 2022 from 27 in 2021 at the National level. Among the bigger States/UTs, the maximum IMR has been observed in Madhya Pradesh (40) and the minimum in Kerala (7).

- IMR for the Country has come down to 26 in 2022 from 33 in 2017, a decline of 7 points over last 5 years and an annual average decline of about 1.4 points. The corresponding decline in rural IMR has been to the tune of 8 points (37 in 2017 to 29 in 2022) against a decline of 5 points in urban IMR (23 in 2017 to 18 in 2022). Both the genders have shown decline in the period 2017-22.

- Despite this decline, one in every 37 infants at the National level, one in every 33 infants in rural areas and one in every 56 infants in urban areas still die within one year of life.

- In 2022, U5MR for the Country has shown a decline of 1 point from 2021 (30 in 2022 against 31 in 2021). There has been a decline of 1 point in male U5MR and female U5MR during the corresponding period.

- Sex Ratio at Birth for the Country has gone up by 1 point to 914 in 2021-22 from 913 in 2020-21. Kerala and Chhattisgarh has reported the highest Sex Ratio at Birth (970) while Uttarakhand, the lowest (857). Sex Ratio at Birth for Rural and Urban areas was 912 and 921 respectively during 2021-22.

- Total Fertility Rate (TFR) for the Country has remain same at 2.0 in 2022 and 2021. During 2022, Bihar has reported the highest TFR (3.0) while Delhi and Tamil Nadu have reported the lowest TFR (1.3). It is noteworthy that the

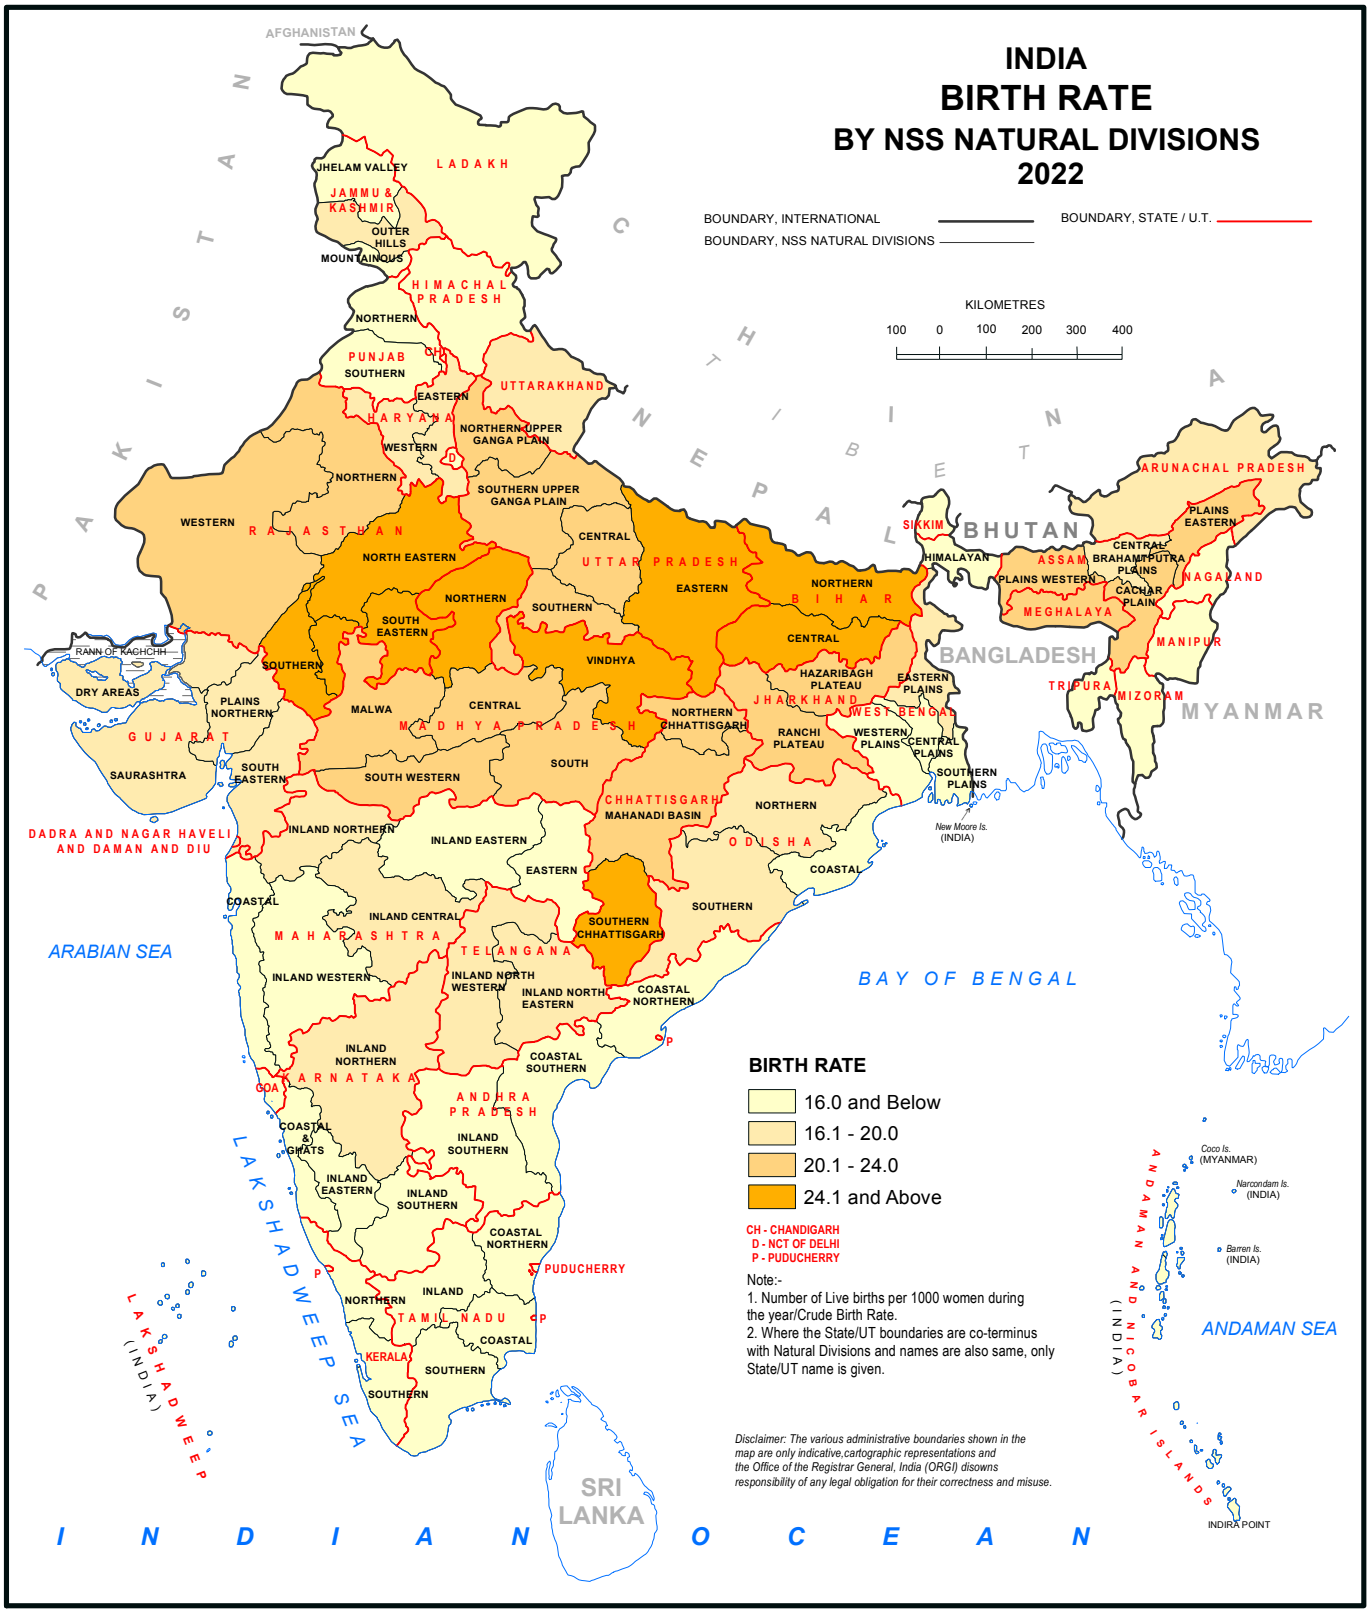

replacement level TFR, viz. 2.1, has been attained at the National level, along with Delhi (1.3), Tamil Nadu (1.3), West Bengal (1.4), Kerala (1.5), Punjab (1.5), Himachal Pradesh (1.5), Maharashtra (1.5), Andhra Pradesh (1.6), Jammu & Kashmir (1.6), Karnataka (1.6), Telangana (1.6), Odisha (1.7), Uttarakhand (1.8), Gujarat (1.9), Haryana (2) and Assam (2.1).

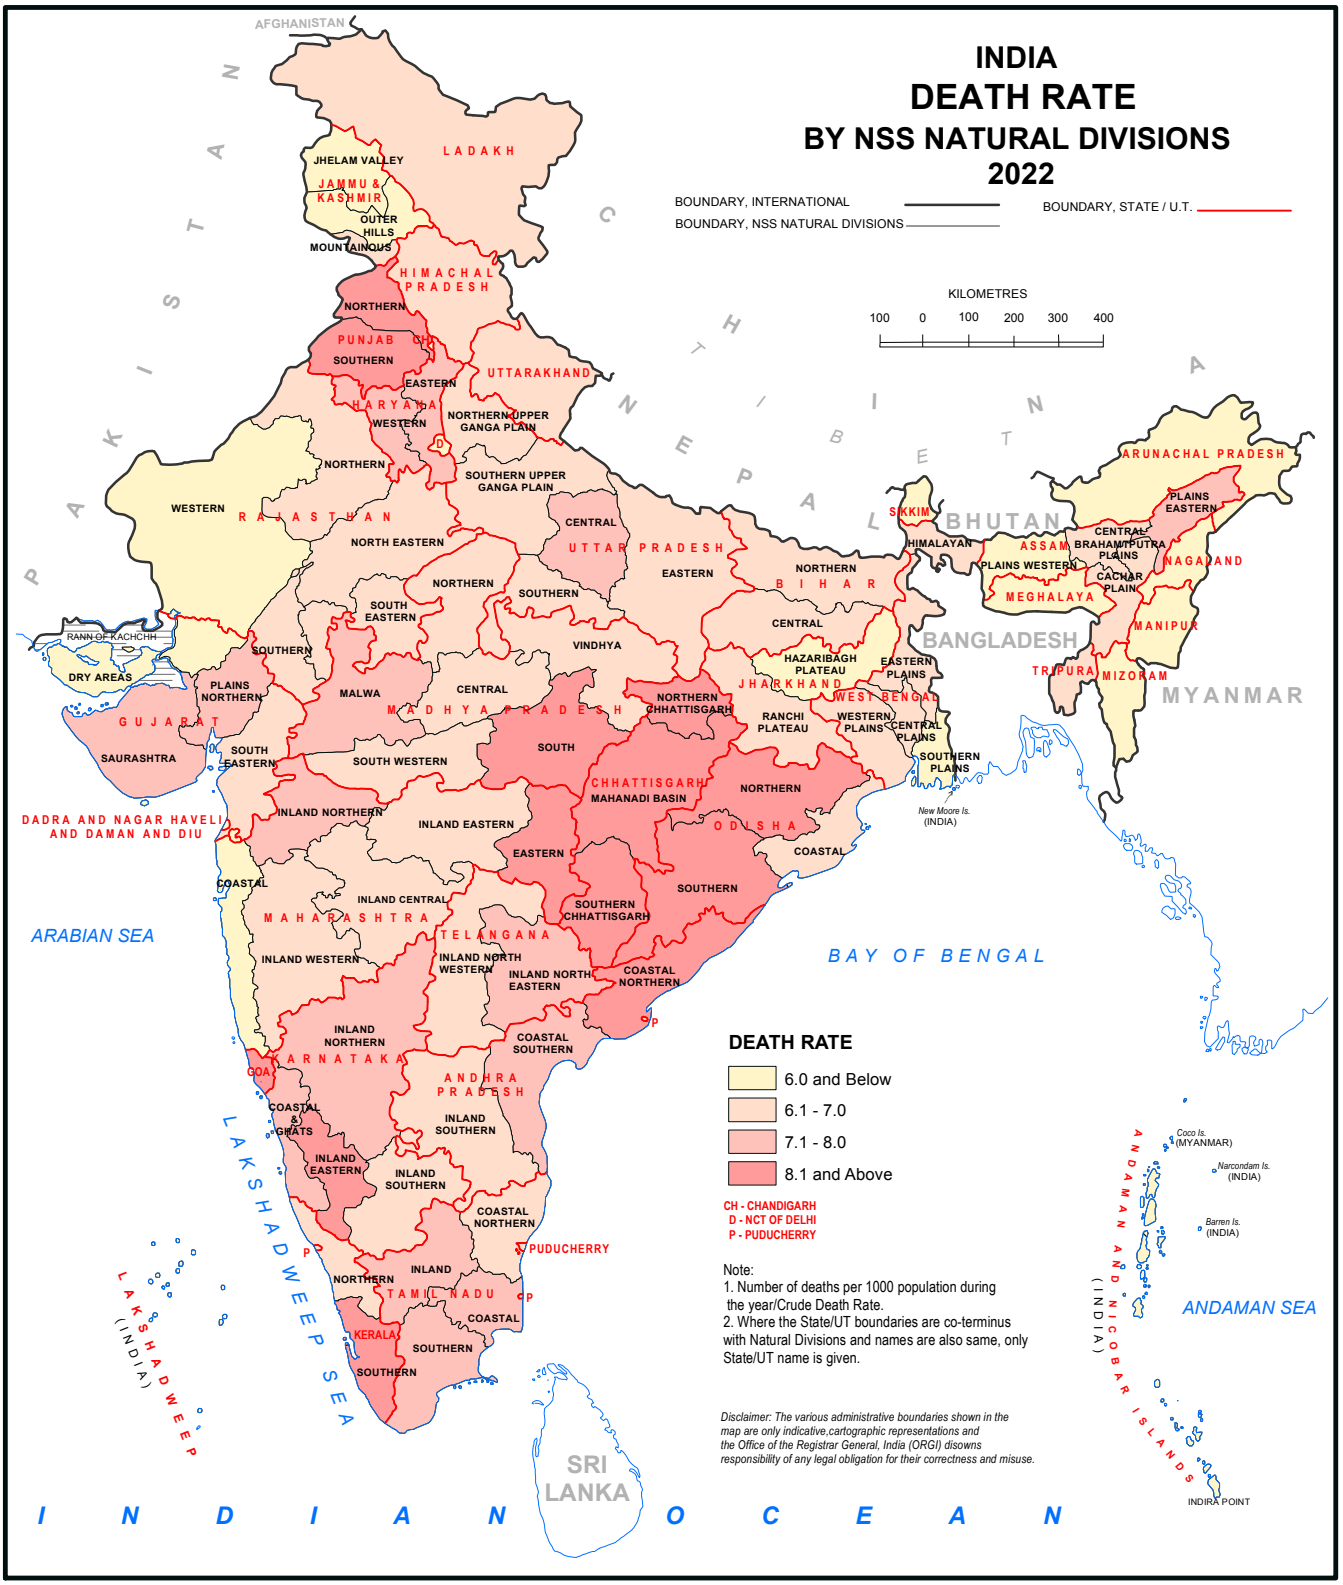

- At present, a rural woman (having a TFR of 2.2) at the National level would have about one child more than an urban woman (having a TFR of 1.6), on an average.

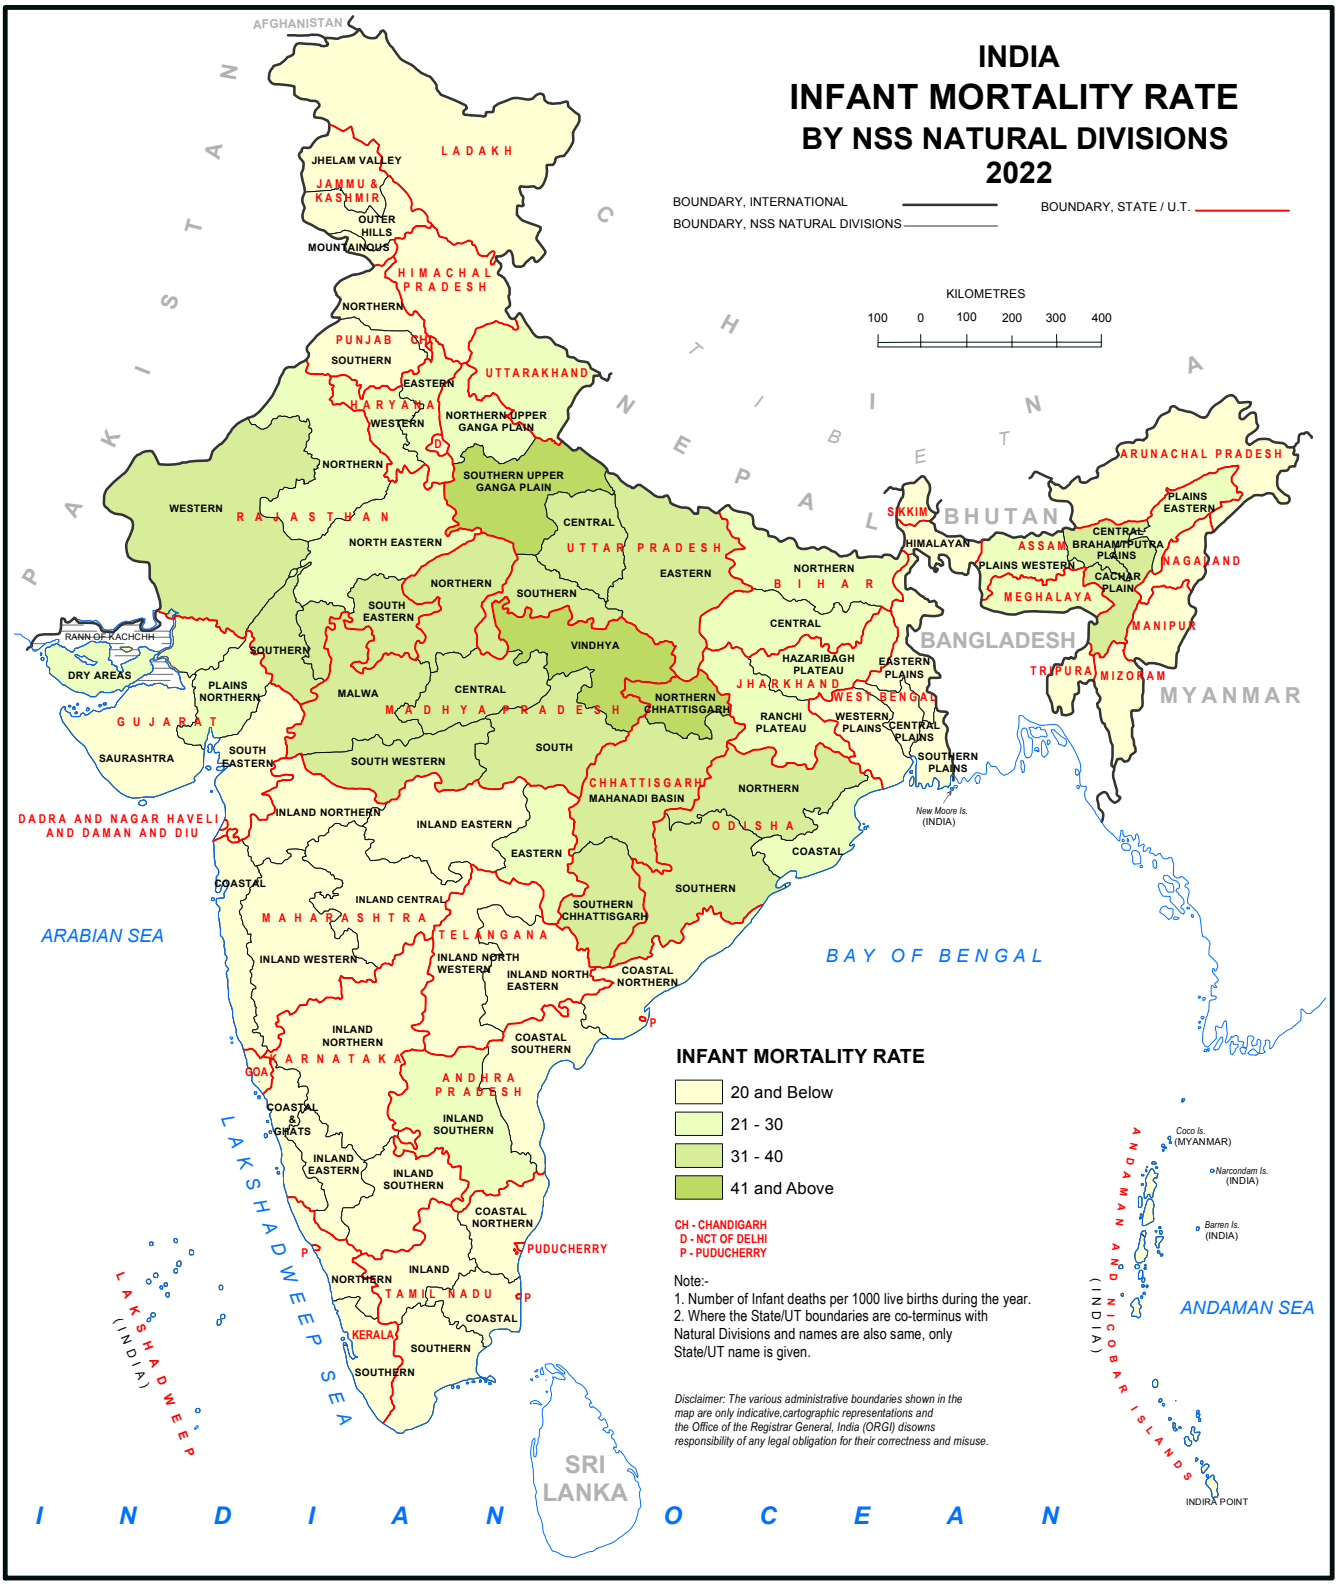

- During 2017-2022, there has been a decline of 0.2 point in TFR at the National level. There has been decline of 0.2 point in rural and 0.1 point in urban during the corresponding period.

- In case of about 94.3 percent live births, the mothers have received the medical attention at delivery either at Government hospital or at Private hospital in 2022.

- In 37.8 percent cases of deaths, the deceased have received medical attention before death, either at Government hospital or at Private hospital in 2022.

INDIAN OCEAN

CHAPTER – 1

INTRODUCTION

Registration of births and deaths is an important source for demographic data for socio-economic development and population control in developing countries. The data on population growth, fertility and mortality serves as the prime constituent for population projections. Apart from these vital indicators, an adequate evaluation of a number of programs in the health sector, including family planning, maternal and reproductive health, immunization programs, is dependent upon the availability of accurate, up-to-date fertility and mortality data. In India, the need for dependable demographic data was felt soon after independence heralding the era of five year planning. The registration of births and deaths started on voluntary basis and there was no uniformity in statistical returns resulting in both under-registration and incomplete coverage. In order to unify the Civil Registration activities, the Registration of Births & Deaths Act, 1969 was enacted. Despite having the registration of birth & death compulsory under the statute and various efforts taken by Office of Registrar General of India for complete birth & death registration, the level of registration of births and deaths under the Act is improving but, continued to be under-reported in some States/UTs. With a view to generate reliable and continuous data on these indicators, the Office of Registrar General, India, initiated the scheme of sample registration of births and deaths in India popularly known as Sample Registration System (SRS) in 1964-65 on a pilot basis and on full scale from 1969-70. The SRS since then has been providing data on a regular basis.

1.2 The demographic scenario in the Country has been undergoing a change since the inception of SRS; however, the profile and rate of change is not uniform across all the States/UTs. Overall, the Crude Birth Rate in the Country has come down from 36.9 per thousand population in 1971 to 19.1 in 2022, whereas the Crude Death Rate has declined from 14.9 to a low of 6.8 during the year 2022. The Infant Mortality Rate, which is an important indicator of the health status of the Country, has registered a significant decline from 129 per thousand live births in 1971 to 26 in 2022. During the period, the Total Fertility Rate of the Country has declined from 5.2 to 2.0. To fulfill its objective of monitoring the changes in vital indicators, the SRS sampling units are retained for about ten years, making it a panel household survey.

1.3 Various methods based on the application of sampling techniques have been tried and tested in many developing countries. Such methods include single and multi-round retrospective surveys and the dual record system. The SRS in India is based on a dual record system. The field investigation under Sample Registration System consists of continuous enumeration of births and deaths in a sample of villages/urban blocks by a resident part-time enumerator, and an independent six-monthly retrospective survey by a full-time supervisor. The data obtained through these two sources are matched. The unmatched and partially matched events are re-verified in the field to get a deduplicated count of events. The advantage of this procedure, in addition to the elimination of errors of duplication, is that it leads to a quantitative assessment of the sources of distortion in the two sets of records making it a self-evaluating technique.

1.4 The revision of SRS sampling frame is undertaken every ten years based on the results of the latest census. While changing the sample, modifications in the sampling design; wider representation of population; overcoming the limitations in the existing scheme; meeting the additional requirements etc. are considered. The first replacement was carried out in 1977-78 and the last being in 2014. Whereas the replacement of samples in earlier years was undertaken in phases spread over 2-3 years, the replacements in 2004 and 2014 were done in one go within a year. The following table provides the sample size in different replacement period.

Statement 1

Number of sample units at different replacement periods

Residence	1969-70	1977-78	1983-85	1993-95	2004	2014
Rural	2432	3684	4176	4436	4433	4961
Urban	1290	1738	1846	2235	3164	3892
Total	3722	5422	6022	6671	7597	8853

1.5 The earlier sample was based on the reliability of birth rate at the State level, whereas the 2004 and 2014 samples have been estimated using IMR reliability at natural division level. The present report 'SRS Statistical Report, 2022' is based on the sample from Census 2011 frame.

1.6 The main objective of SRS is to provide reliable estimates of Birth Rate, Death Rate and Infant Mortality Rate at the Natural division level for bigger States/UTs and at the State level for smaller States/UTs. Natural divisions are National Sample Survey (NSS) classified group of contiguous administrative districts with distinct geographical and other natural characteristics. It also provides data for other measures of fertility and mortality including Total Fertility, Infant and Child Mortality Rate at higher geographical levels.

Structure of the Sample Registration System

1.7 The main components of SRS are:

(i) Base-line survey of the sample units to obtain demographic details of the usual resident population of the sample areas;

(ii) Continuous (longitudinal) enumeration of vital events pertaining to usual resident population by the enumerator;

(iii) Independent retrospective half-yearly surveys for recording births and deaths which occurred during the half-year under reference and up-dating the Houselist, Household schedule and the list of women in the reproductive age group along with their pregnancy status by the Supervisor;

(iv) Matching of events recorded during continuous enumeration and those listed in course of half- yearly survey;

(v) Field verification of unmatched and partially matched events; and

(vi) Filling of Verbal Autopsy Forms for finalized deaths.

Baseline Survey:

1.8 The baseline survey is carried out prior to the start of continuous enumeration. This involves preparation of a notional map of the area to be surveyed, house numbering and house listing and filling of a household schedule. The supervisor prepares a notional map with the help of the enumerator showing important landmarks and location of the houses to be covered in the sample unit. Subsequently, a list of houses/households to be covered by the sample in the House List (Form-1) is prepared and the Household Schedule (Form-2) is filled in. In the Household Schedule (Form-2), the residential status and other demographic particulars of each individual residing in the household viz. identification code, name, sex, date of birth, age, educational/marital status and relation to head of household, etc. are recorded. The inmates of public institutions like hotels, inns, schools and hospitals are excluded, but households living permanently within the compound of such institutions are covered. A list of all women in the reproductive span along with their pregnancy status is also prepared in Form 3 at the time of the baseline survey.

Continuous enumeration:

1.9 The enumerator maintains a Birth Record (Form 4 and 6) and a Death Record (Form 5 and 7) in respect of his/her area. The enumerator is expected to record all births and deaths occurring within the sample unit, as well as those of the usual residents occurring outside the sample unit. The events in respect of visitors occurring within the sample unit are also listed, but these are not considered while calculating rates. Thus, the events to be netted by the enumerator are those pertaining to: (i) usual residents inside the sample unit; (ii) usual residents outside the sample unit; (iii) in-migrants present; (iv) in-migrants absent; and (v) visitors inside the sample unit.

1.10 For ensuring complete netting, the enumerator uses different sources to get information of the occurrence of vital events in the sample unit. These include the help of the village priest, barber, village headman, midwife and such other functionaries. The enumerators maintain contact with these informants at frequent intervals and collects information about the occurrence of births and deaths. On being informed about the occurrence of an event, the enumerator visits the concerned household and records the prescribed particulars. The enumerator also keeps in touch with other socially important persons and visits local or nearby hospitals, nursing homes, cremation or burial grounds, at frequent intervals to keep updated about the occurrence of events. Despite all these efforts, the enumerator may miss information about some of the events and is, therefore, required to visit all the households once a month in sample villages/enumeration blocks so as to ensure that all the events have been recorded.

Half-yearly Survey:

1.11 Half-yearly survey is carried out independently in each sample unit by a full-time supervisor. The supervisor belonging to the statistical cadre of the State Census Directorates (either a Compiler or a Sr. Compiler or a Statistical Investigator or any suitable official) visits each and every household in the sample unit and records the particulars of births and deaths in Forms 9 & 10 respectively in respect of all the usual residents and visitors (only those occurring within the sample unit) which had occurred during the half-yearly period (January-June or July-December) under reference. Simultaneously, the house-list, the household schedule and the pregnancy status of women are updated by making entries of changes, if any. The list of all women in the reproductive span along

with their pregnancy status, which helps in better netting of all the births is available through mobile app to enumerator, so that better netting of event could be possible. While carrying out this survey the supervisor does not have access to the birth and death records of the enumerator for the same. The Half Yearly Surveys are retrospective in nature and therefore the first HYS for the reference period January-June of a year takes place in July- November period of that year and the Second HYS pertaining to July-December of a year takes place in January-May of the subsequent Year.

Matching:

1.12 On completion of the half-yearly survey, the events captured in the Forms 9 & 10 (filled-in by the supervisors) are compared with those in the Forms 4 & 5 (filled-in by the enumerators). This is done through online portal specially developed for SRS at the Office of Directorate of Census Operations for all States/UTs except for rural areas of Kerala, where it is done at the Directorate of Economics and Statistics of the States. Selected important entries in the enumerator's and supervisor's record are matched item by item and events are classified as fully matched, partially matched and unmatched. The items generally considered for matching for birth events are: Identification code of the head of Household and mother, Relationship of the mother to head, date of live birth, month in case of still-birth/abortion, sex in case of live birth /still-birth and the items considered for death events are: identification code of the head of household and mother in infant death, relationship of the deceased to head, date of death and sex of the deceased.

Field verification of unmatched and partially matched events:

1.13 Every unmatched or partially matched event is verified by a visit to the concerned household. This is done either by a third person or jointly by the supervisor and the enumerator, depending upon the availability of staff.

Sample Design:

1.14 The Sample design adopted for SRS is a uni-stage stratified simple random sample without replacement except in stratum II (larger villages) of rural areas, where two-stage stratification has been applied. In rural areas of bigger States/UTs (population with ten million or more as per Census 2011), the NSS natural division is the first level of geographical stratification. The overall stratification in rural areas has been done on size of villages with villages having population less than 2,000 forming Stratum I and villages with population 2,000 or more forming Stratum II. Smaller villages with population less than 200 were excluded from the sampling frame in such a manner that the total population of villages so excluded did not exceed 2 percent of the total population of the State. The number of sample villages in each State was allocated to the substrata proportionally to their size (population). The villages within each size stratum were ordered by the female literacy rate based on the Census 2011 data, and three equal-size substrata were established. The sample villages within each substratum were selected at random with equal probability. In the case of villages of Stratum II, each sample village with a population of 2,000 or more was subdivided into two or more segments in a way that none of the segments cut across the Census Enumeration Blocks (CEBs) and the population of each segment formed by grouping the contiguous CEBs was approximately equal and did not exceed 2000. A frame of segments was then prepared and the selection of segments was done at random at the second sampling stage for the SRS enumeration.

1.15 In urban areas, the categories of towns/cities have been divided into four strata based on the size classes in contrast to the six strata in the earlier sampling frame. Towns with population less than one lakh have been placed under stratum I, towns/cities with population one lakh or more but less than 5 lakhs under stratum II, towns/cities with population 5 lakh or more under stratum III and four metro cities of Delhi, Mumbai, Chennai and Kolkata as separate strata viz. stratum IV. The sampling unit in urban area is a Census Enumeration Block. The Census Enumeration Blocks within each size stratum were ordered by the female literacy rate based on the Census 2011 data, and three equal-size sub-strata were established. The sample Census Enumeration Block within each substratum was selected at random with equal probability. A simple random sample of these enumeration blocks has been selected within each sub-stratum without replacement from each of the size classes of towns/cities in each State/Union Territory.

Sample Size:

1.16 The Infant Mortality is the decisive indicator for estimation of sample size. The permissible level of error has been taken as within 15 prse (percentage relative standard error) at Natural Division level in respect of bigger States/UTs having population more than 10 million as per Census 2011. For minor States/UTs, 15 prse has been fixed at the total State level. By and large the above criteria have been followed. However, there have been a few exceptions on account of operational constraints. Half Yearly Survey 2021 was conducted in 8842 sample units, covering about 8.4 million sample population.

Statement 2

Number of sample units and population covered India, States and Union Territories, 2022

India/States/ Union Territories	Number of sample units			Population covered (in'000)		
	Total	Rural	Urban	Total	Rural	Urban

6. Puducherry	55	18	37	55	30	25

Note: 'Total' population may not add up to 'Rural' and 'Urban' population due to rounding.

Estimation Procedure

1.17 For major States/UTs, estimates of population, births, deaths and infant deaths are generated for rural/urban areas separately at the natural division level. For smaller States/UTs, these estimates are generated for rural/urban areas separately at the State/UT level. The estimates of Birth, Death and Infant Mortality Rates are obtained as the ratios of the 'estimated births to estimated population', 'estimated deaths to estimated population' and 'estimated infant deaths to estimated births' respectively expressed in terms of per thousand.

Organization

1.18 From 1995, the SRS is being implemented mainly through the Directorates of Census Operations in both rural and urban areas. However, in the State of Kerala the implementation of field work and their monitoring for rural units has been entrusted to the Directorate of Economics & Statistics of the State Government and the urban units to the Directorate of Census Operations. Till 2020, the implementation of fieldwork in rural area of Maharashtra was also looked after by the Directorate of Economics and Statistics of State Government of Maharashtra.

1.19 For continuous enumeration, there is a resident part-time enumerator for each of the sample unit, who is usually an Anganwadi/ASHA worker/Teacher and is paid honorarium for this work. The independent retrospective half-yearly surveys are carried out by the full-time supervisors who are the regular staff of the State Directorate of Census Operations. One supervisor is usually assigned a set of 10 to 12 sample units for conducting half-yearly surveys. Each State headquarters through its staff manages; planning and organizing field operations, imparting training to the field staff, supervision and control, ensuring a regular flow of data from the field,

1.20 At the National level, the Vital Statistics Division of the Office of the Registrar General, India coordinates the implementation work, formulates and prescribes necessary standards, provides necessary instructions and guidance, undertakes tabulation, analysis and dissemination of data.

Training and Supervision

1.21 Before the commencement of work, requisite training is imparted to the enumerators to make them understand their role and responsibility. This is followed by trainings at periodic intervals to clarify the doubts and also to keep the enumerators updated with the improvements introduced in the system from time to time. Besides, they are also provided with a manual of instructions for day-to-day consultation to remove the difficulties in course of work. Supervisors are also given necessary training with a view to enabling them to carry out the half-yearly surveys properly and efficiently. They are also provided with a manual of instructions named "Instruction cum operating Manual" for this purpose. In addition to these, State officials associated with the implementation of the SRS are also given necessary training. The detailed instructions and guidance, with regard to the various stages of work, have been explained in the Instruction cum operating Manual.

1.22 Supervision of the field work is an important component of SRS and is undertaken by the supervisory level officials such as the Investigator, Assistant Director, Deputy Director, Joint Director and Director. Officers at the State headquarters also undertake visits to sample units and inspect the work at the field level. Officers of Vital Statistics Division in the headquarters also undertake surprise checks and visits in SRS units to control the quality of work.

Data collection

1.23 In the baseline survey, which is conducted jointly by both the enumerator and the supervisor, the data is being collected in Forms 1, 2 and 3 and Form 0 is also filled at the end of survey in a unit. The baseline survey is a decennial exercise which takes place after availability of new frame through latest census. The data collection in the field is carried out by the enumerators for continuous enumeration and supervisors for retrospective survey. Half Yearly Survey is conducted by the full-time supervisor. In Half Yearly Survey, besides updating the Forms 1, 2 and 3, the details of births and deaths occurred in the sample units in the reference period are also collected in Forms 9 and 10 respectively.

Introduction of Automation in SRS

1.24 The quality of data collection is of paramount importance in any survey especially in Sample Registration System considering its focus on data of births, deaths, infant deaths, details of pregnancy, etc. which are to be collected with utmost care. Towards fulfilling this objective, dual record system has been in practice in SRS apart from other quality measures in the field. To take the credibility and efficiency of the field survey to greatest heights, it was the endeavor of the Office of the Registrar General, India, to implement full automation in Sample Registration System. Accordingly, from Baseline 2014 onwards the entire process of data collection and processing has been automated. This pioneering step of a paper-less survey, for the first time in the history of SRS, can be viewed as greatly contributed to the recent Digital India initiatives of the Government of India.

1.25 In the automated procedure, the supervisor and enumerators are now carrying a mobile app to the sample units and the data is collected directly on the android-based apps saving time and cost of the survey with efficiency. Dedicated apps for all 4 modules of the Sample Registration System and portal have been developed for this purpose by the Office of Registrar General, India and user-based access has been given to the different users. The Directorate of Census Operation monitors the operation of fieldwork through a portal including activities like allocation of units to different users, matching of the data and finalization of the collected data under the survey. This has made the system paperless as there is no need to send finalized results in paper format by any user.

1.26 These apps enable survey supervisors and enumerators to directly collect and upload data on the SRS portal without any manual intervention. The app is developed for all 4 modules of the Sample Registration System and PTE module is also available in local languages for data collection by Part-Time Enumerators.

SRS Forms and their flow

1.27 For collecting information on population and vital events, various forms/ schedules have been prescribed under the SRS. Depending upon various operations under the system, the following 17 types of forms are used under SRS:

A. Baseline Survey Forms

Form 1: House List

Form 2: Household Schedule

Form 3: Pregnancy Status of Women

B. Continuous Enumeration Forms

Form 4: Outcome of Pregnancy recorded by Enumerator (January-June/July-December)

Form 5: Deaths recorded by Enumerator (January-June/July-December)

Form 6: Monthly report of Outcome of Pregnancy

Form 7: Monthly report of Deaths

C. Half-yearly Survey Forms

Form 9: Outcome of Pregnancy recorded by Supervisor (January-June/July-December)

Form 10: Deaths recorded by Supervisor (January-June/July-December)

Form 15: Distribution of usual resident population by age, sex and marital status (as on 1st July/1st January)

Form 16: Distribution of Female population by broad age groups and levels of education (as on 1st July/1st January)

Form 17: Number of females who got married by age at effective marriage (January-June/July-December)

D. Compilation/Tabulation Forms

Form 8: Consolidated monthly report on births and deaths

Form 11: Finalized list of Outcome of Pregnancy (January-June/July-December)

Form 12: Finalized list of Deaths (January-June/July-December)

Form 13: Results of the HYS for Outcome of Pregnancy (January-June/July-December)

Form 14: Results of the HYS for Deaths (January-June/July-December)

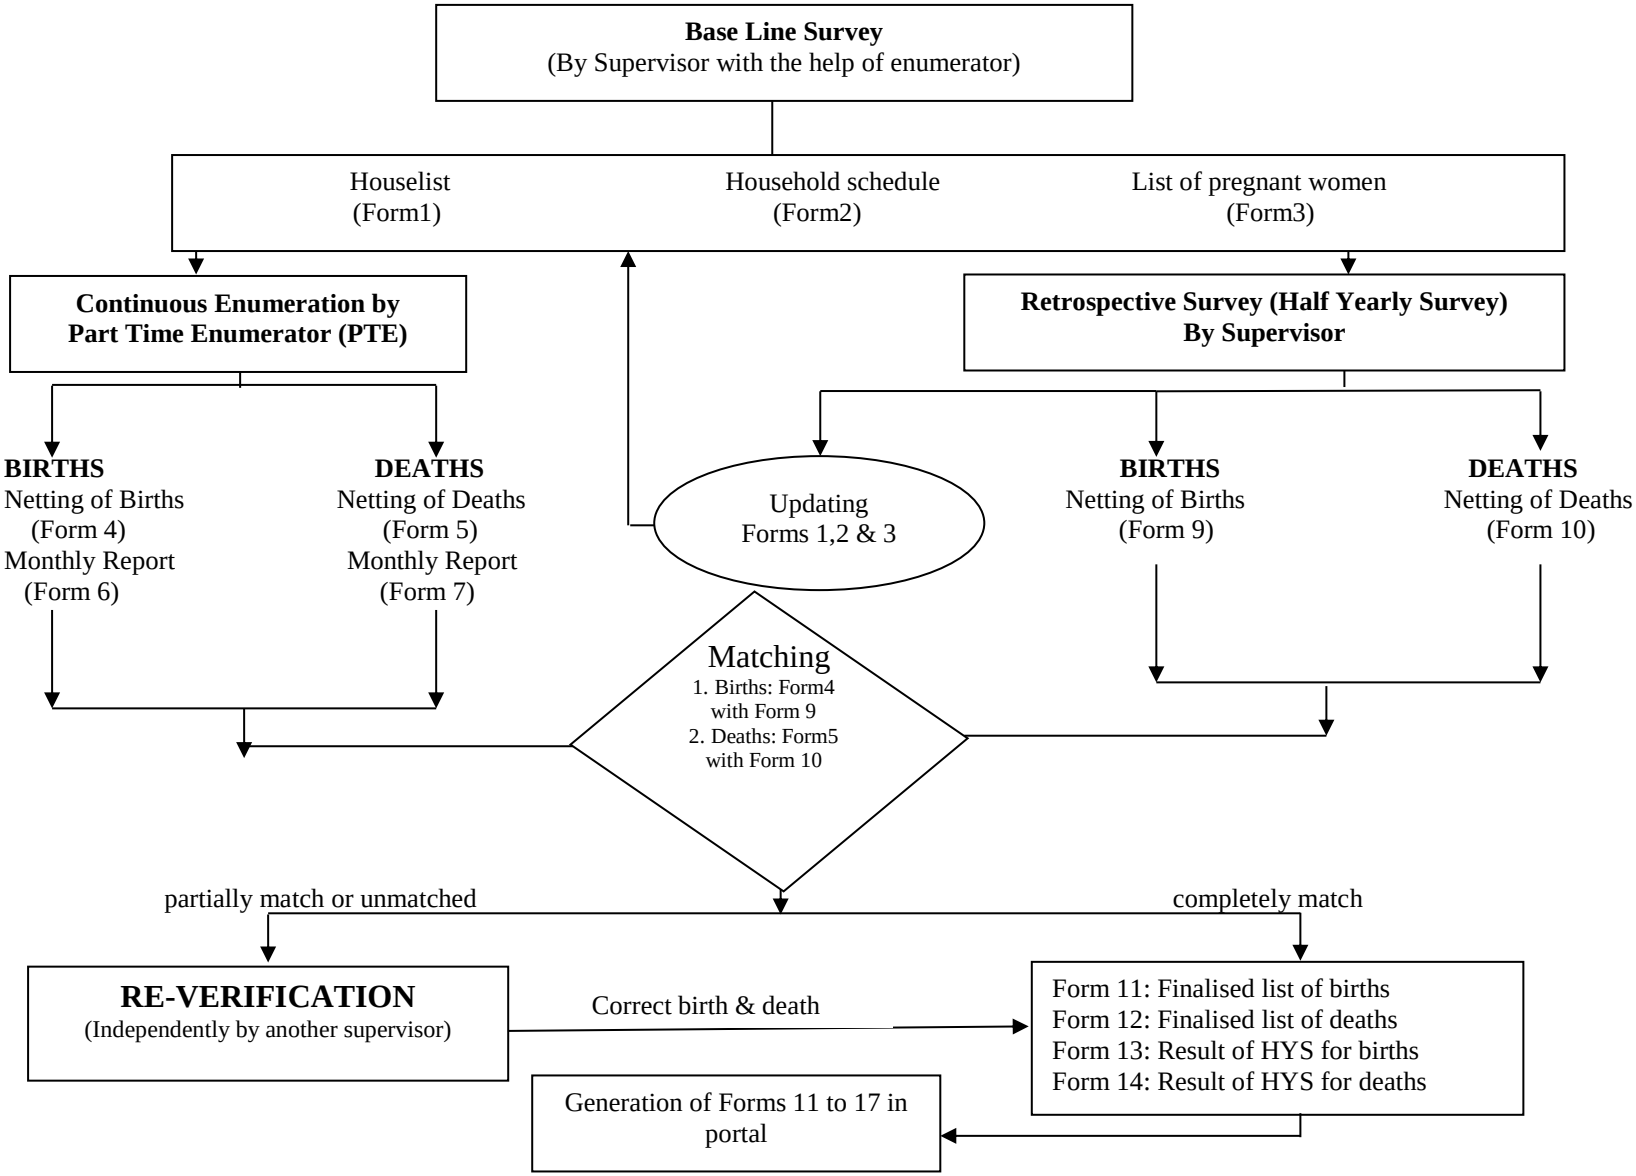

1.28 The enumerator records the details of each birth and death event that occurred during the reference period in Forms 4 and 5 respectively on a continuous basis. A monthly report on births and deaths (Forms 6 and 7) is required to be uploaded by the enumerators on the app in the first week of the following month. The relevant entries of birth and death records in the monthly report are auto-populated in six monthly records and uploaded on the portal. Enumerator can add any

missed events in six monthly reports as per Form 4 and 5 and upload them on the portal missed in any of the monthly reports.

1.29 The supervisor records the details of each birth and death event occurring during the six-month reference period in Forms 9 and 10 respectively in addition to the updation of Forms 1, 2 and 3. After matching of each birth and death event recorded in Form 4 and 5 with those in Form 9 and 10 and verification of partially and unmatched events in the field, finalized Form 11 and 12 are prepared after necessary corrections and inclusion of additional events recorded during the re-verification. These forms i.e. Form 11 and Form 12 are auto-generated in the portal along with the half-yearly survey results in Form 13, 14, 15, 16 and 17 after the finalization of the data on the portal. The complete processes automization i.e. aggregation of birth and death events reported by PTEs as well as HYS Supervisors, matching, re-verification and generation of report 11 to 17; reduces time required for data collection and data processing; thereby leading to improvement in quality of data.

1.30 Flow-chart of SRS returns are shown in Chart 1. Due to automation most of the errors in terms of wrong classification of sex or invalid coding, not legible details are taken care of. We do not get birth and death without sex classification or without essential details as the application does not allow for such omission /commission.

Chart 1: Flow Chart

* * *

CHAPTER 2

POPULATION COMPOSITION

The data on population by age and sex is vital for many data users like demographers, health administrators etc. for planning and evaluation of various developmental and health programs. The classification of population in terms of rural/urban segmentation, sex, marital status by age unveils the characteristics of population composition and provides disaggregated data for discerning the structure of population composition. Being one of the most important demographic characteristics, data on age is collected and updated in both the half-yearly surveys of SRS for all the members of the household covered in the sample units.

2.2 As per available data from SRS, there has been a gradual decline in the share of population in the age group 0-14 from 41.2 to 38.1 per cent during 1971 to 1981 and 36.3 to 24.7 percent during 1991 to 2022, whereas the proportion of the economically active population (15-59 years) has increased from 53.4 to 56.3 percent during 1971 to 1981 and 57.7 to 66.3 percent during 1991 to 2022. The percentage of the elderly population has stable 5.9 percent for 65+ stable at 9.0 percent for 60+ respectively during the periods under reference. Marital status and Female mean age at marriage are essential constituents to monitor fertility and population growth. The data on marital status has been included in SRS from 1991, whereas on Female mean age at marriage from 1990 onwards. There is a marginal increase in the proportion of married Females from 45.7 in 1991 to 49.0 in 2022, whereas the proportion of widowed/divorced/ separated females has decreased from 8.1 in 1991 to 5.2 in 2022. The mean age at effective marriage for Females has increased from 19.3 years in 1990 to 22.7 years in 2022.

2.3 This chapter provides data on the percentage distribution of population by age, sex and residence for all broad age groups from 0-4, 0-14, 15-59 and 60+ for India and bigger States/UTs for the year 2022. It also includes data on the percentage distribution of the population by marital status for total population, 10+ and 15+ ages by sex and residence. The State-wise variations in effective age at marriage for females and their corresponding proportions have also been presented in this chapter.

Age composition:

2.4 Age composition by residence and broad age groups 0-14, 15-59, and 60+ for the year 2022 at the National level is shown below in Statement 3. The age group 0-14 is further sub-categorized into the age groups 0-4, 5-9 and 10-14. In the age group 0-14, Male population is about one percent more than Female, whereas in the older age-groups 15-59, 60+, 15-64 and 65+, the percentage of Females is more than that of Males by 0.7, 0.5, 0.8 and 0.4 percentage points respectively. The proportion of young children in the age group 0-4 and also the proportion of the population in the age group 0-14 are higher in rural areas than in urban areas both for Males and Females. A higher proportion of Males and Females in the working age group 15-59 live in urban areas as compared to rural areas. Chart 2 gives a pictorial presentation of data shown in Statement 3. The population pyramid of India is presented in Chart 3.

Statement 3

Percentage distribution of the population by broad age group, Sex and Residence, India, 2022

Residence	Sex	Broad age groups (years)							
		0-4	5-9	10-14	0-14	15-59	60+	15-64	65+
Total	Total	8.1	7.9	8.7	24.7	66.3	9.0	69.4	5.9
	Male	8.3	8.1	8.8	25.3	66.0	8.8	69.0	5.7
	Female	7.8	7.8	8.5	24.1	66.7	9.3	69.8	6.1
Rural	Total	8.8	8.4	9.2	26.4	64.9	8.8	67.8	5.8
	Male	9.0	8.6	9.3	27.0	64.5	8.5	67.4	5.6
	Female	8.5	8.2	9.0	25.7	65.2	9.0	68.2	6.0
Urban	Total	6.7	7.0	7.6	21.3	69.2	9.5	72.6	6.1
	Male	6.9	7.2	7.8	21.9	68.8	9.3	72.2	5.9
	Female	6.5	6.8	7.4	20.7	69.6	9.7	73.0	6.3

Note: Total percentage do not add to 100 on account of rounding in broad age groups

Chart 2: Percentage distribution of the population by broad age groups and Residence, India, 2022

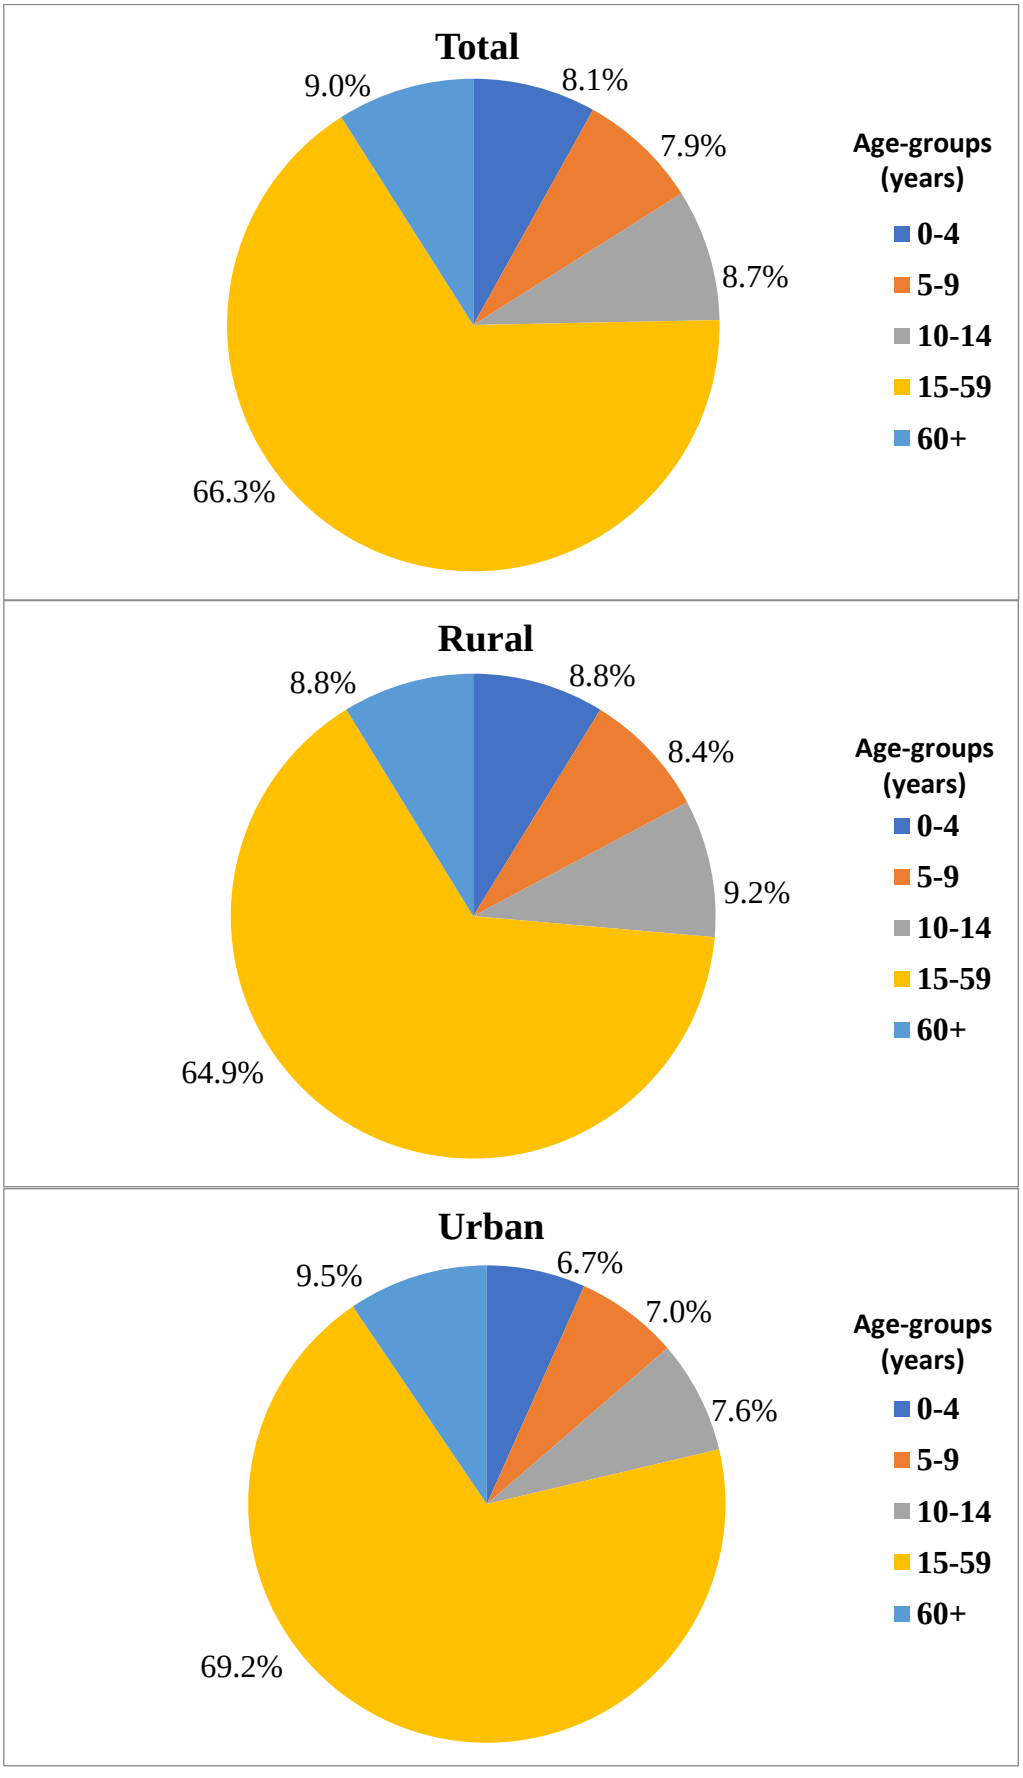

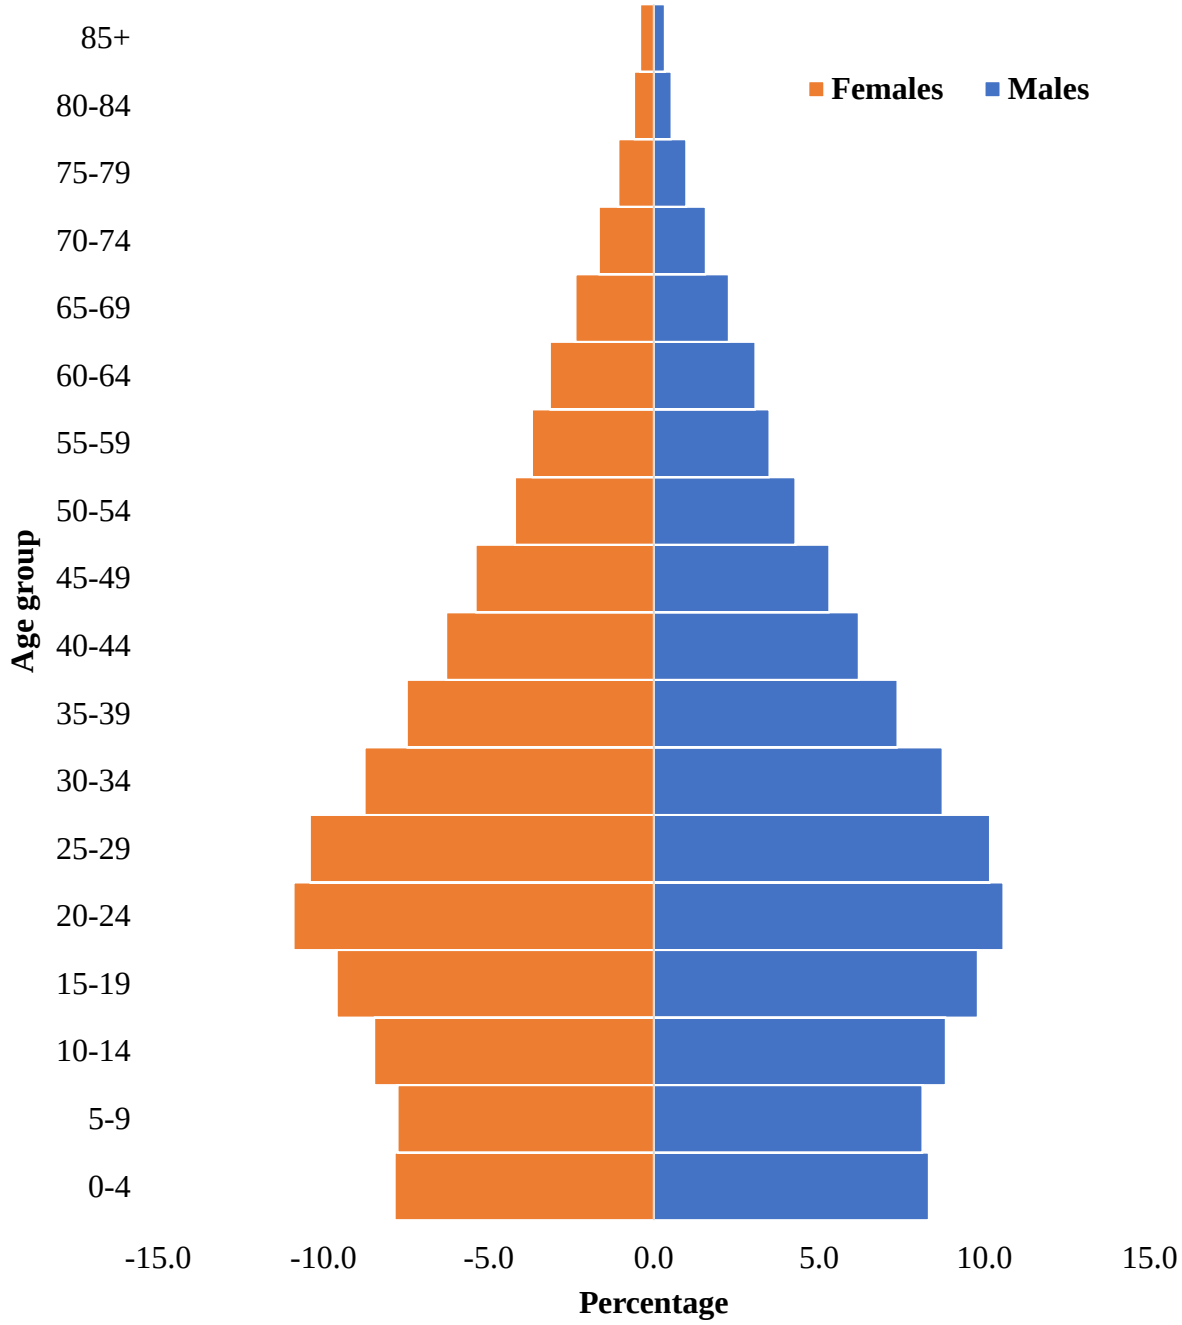

Chart 3: Population Pyramid, India, 2022

2.5 Percentage share of the population in the selected age groups for bigger States/UTs by residence and sex for the year 2022 are given in Statements 4 to 7. Statement 4 gives State-wise percentage of the child population (below 5 years of age). In India, the percentage of the population in the age group 0-4 years is 8.1%, with males and females being 8.3% and 7.8%, respectively. In rural areas, it is 8.8%, with males and females being 9.0% and 8.5%, respectively. In urban areas, it is 6.7%, with males and females being 6.9% and 6.5%, respectively.

2.6 Among the bigger States/UTs, Bihar has the highest percentage of the population in the age group 0-4 years with 11.4%, followed by Rajasthan (9.6%), Madhya Pradesh, Uttar Pradesh and Uttarakhand at 9.3%. The lowest percentage is in Tamil Nadu and Punjab with 5.7% and 6.1% respectively. In rural areas also, Bihar has the highest percentage with 11.7%, followed by Rajasthan (10.0). The lowest percentage is in Tamil Nadu with (6.1%). In urban areas, Bihar has the highest percentage of the population in the age group 0-4 years with (9.0%), followed by Uttarakhand (8.7%), and Rajasthan (8.3%). The lowest percentage is in Himachal Pradesh with (4.8%).

2.7 In terms of total population, it varies from 5.7% in Tamil Nadu to 11.4% in Bihar. The percentage of males in the 0-4 age group is slightly higher than females in all the States except in case of West Bengal for Urban areas. However, the difference is relatively small, with the largest gap observed in Bihar where the percentage of males is 0.9 percentage points higher than females. Chart 4 and 5 show the percentage of child population for bigger States/UTs by residence and sex respectively.

Statement 4

Percentage of population in the age group 0-4 years by Sex and Residence, India and bigger States/UTs, 2022

India and bigger states	Total			Rural			Urban		
	Total	Males	Females	Total	Males	Females	Total	Males	Females

Chart 4: Percentage of child population (0-4 years) to total population by Residence, India and bigger States/UTs 2022

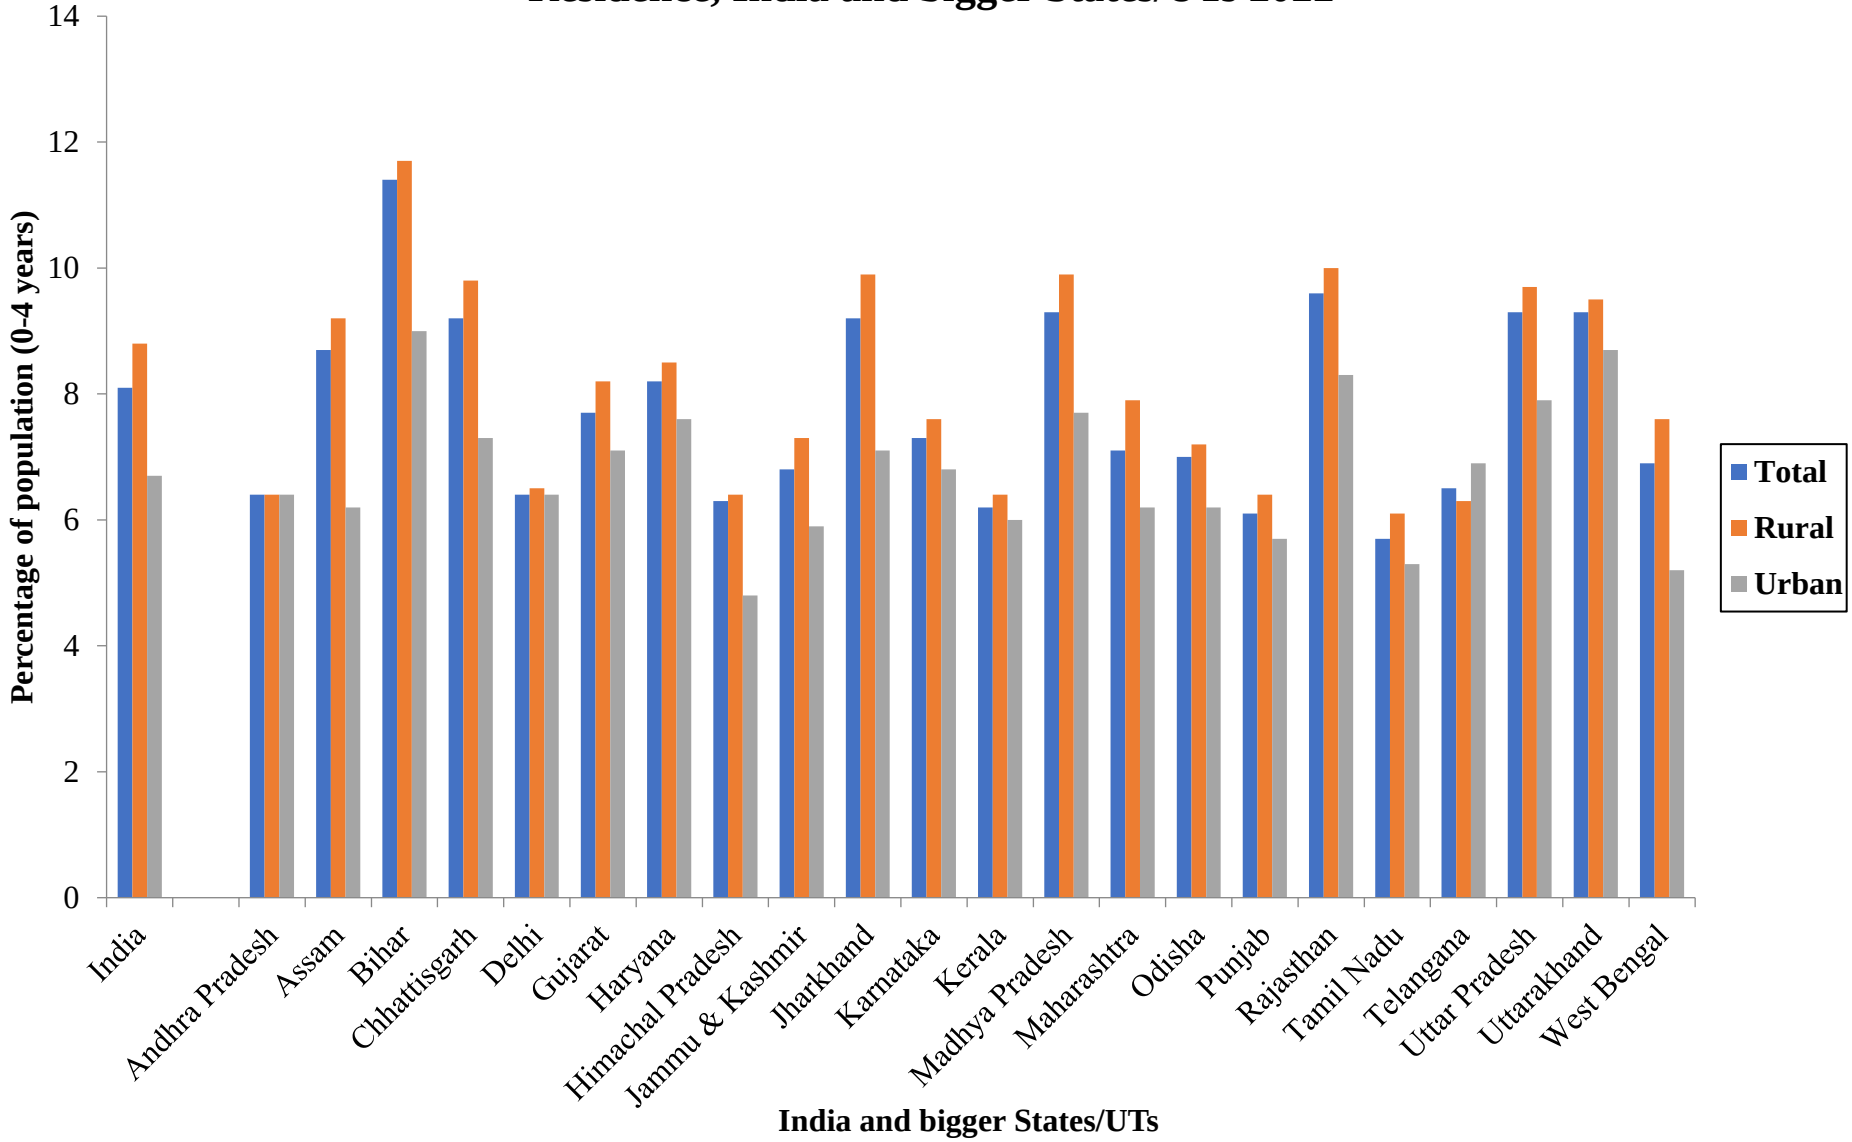

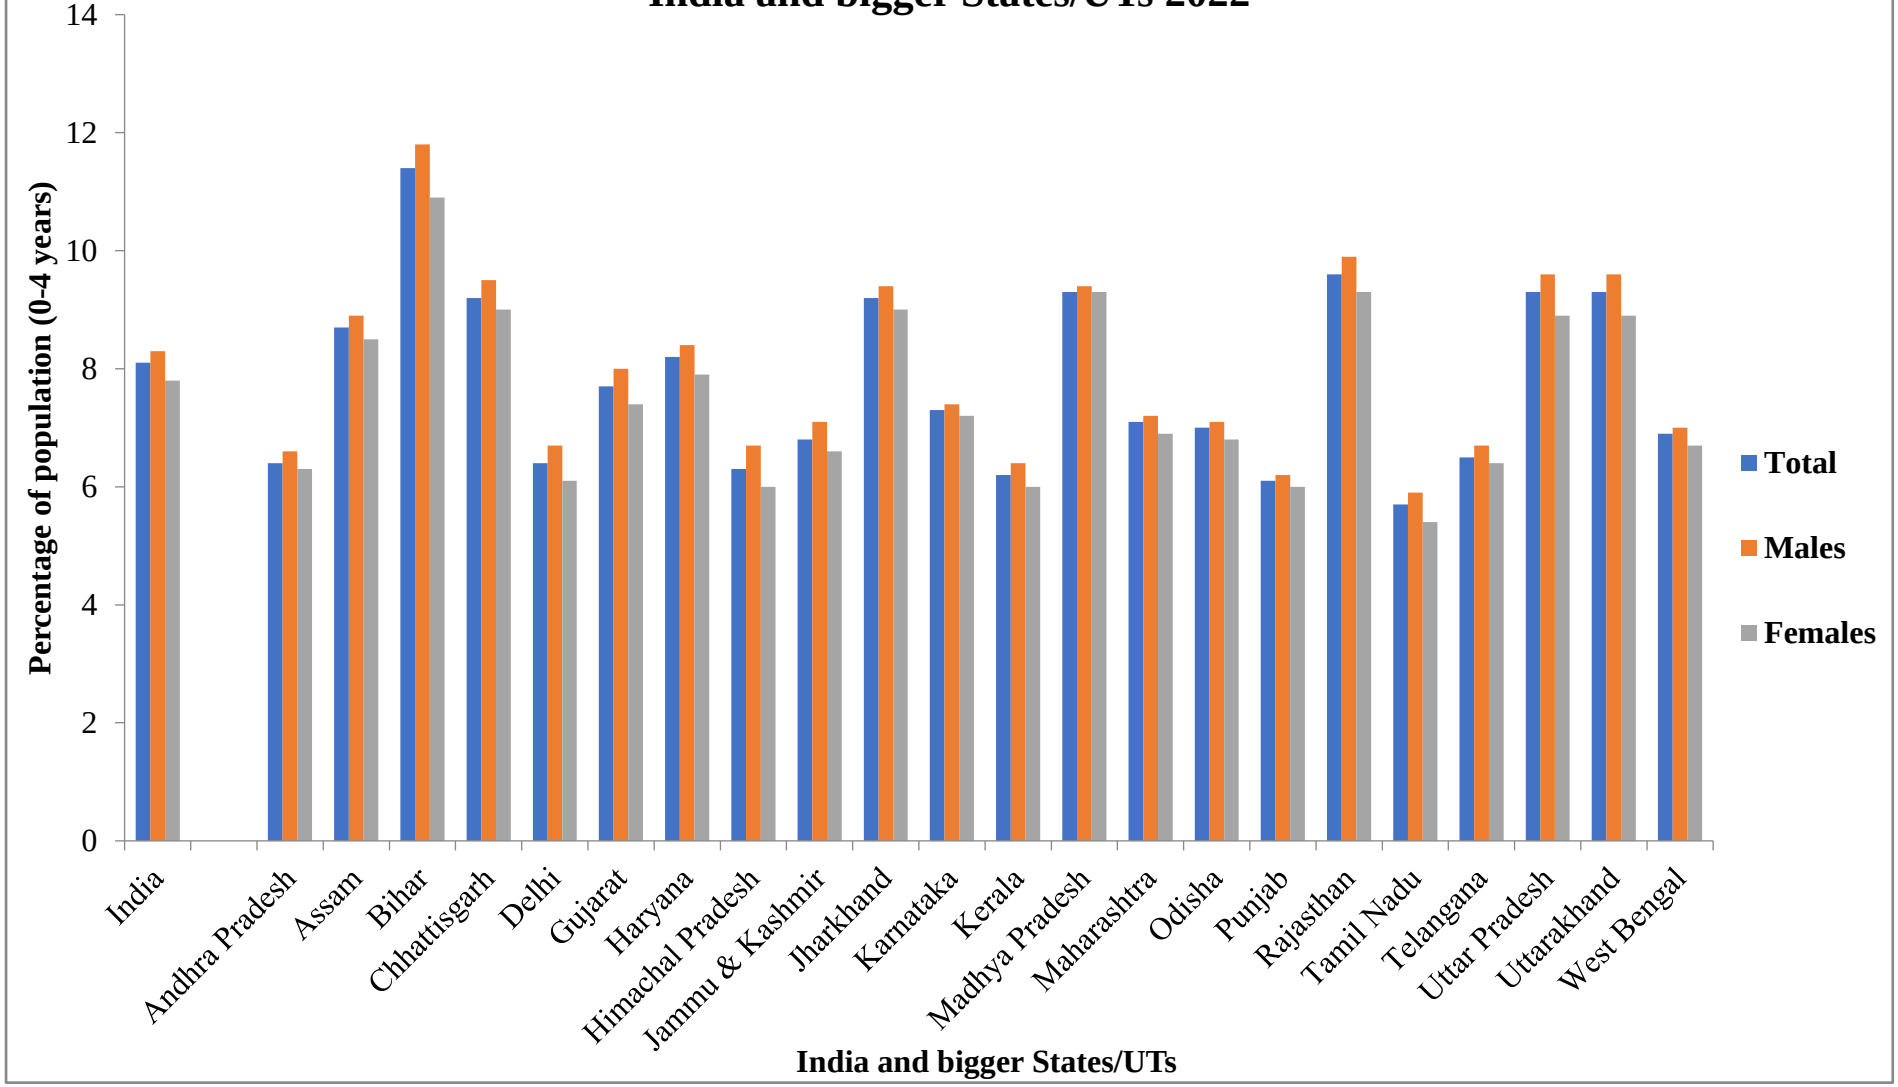

Chart 5: Percentage of child population (0-4 years) to total population by Sex, India and bigger States/UTs 2022

2.8 Percentage of the population of age less than 15 years for India and bigger States/UTs by Sex and Residence for the year 2022 is given below in Statement 5. The data shows that the percentage of the population in the age group 0-14 years in India is 24.7%. Among them, the percentage of less than 15 years of males is 25.3% and that of females is 24.1%. The data further shows that the percentage of the population in the age group 0-14 years in rural areas of India is 26.4%, and in urban areas, it is 21.3%. Among the bigger States/UTs, Bihar has the highest percentage of population in the age group 0-14 years with 32.4%, followed by Jharkhand 28.2%, and Madhya Pradesh 28.1%. States like Tamil Nadu, Andhra Pradesh and Punjab have relatively lower percentages with 18.7%, 19.7% and 19.8% respectively.

2.9 The data shows that the percentage of males in the 0-14 age group is higher than females for all the States/UTs except in urban areas of West Bengal, where the percentage of females is higher than males. The data also shows that the percentage of the population in the age group 0-14 years is higher in rural areas compared to urban areas in all the bigger States/UTs. Chart 6 and 7 gives the pictorial presentation of the percentage of persons below 15 years of age for bigger States/UTs by Residence and Sex respectively.

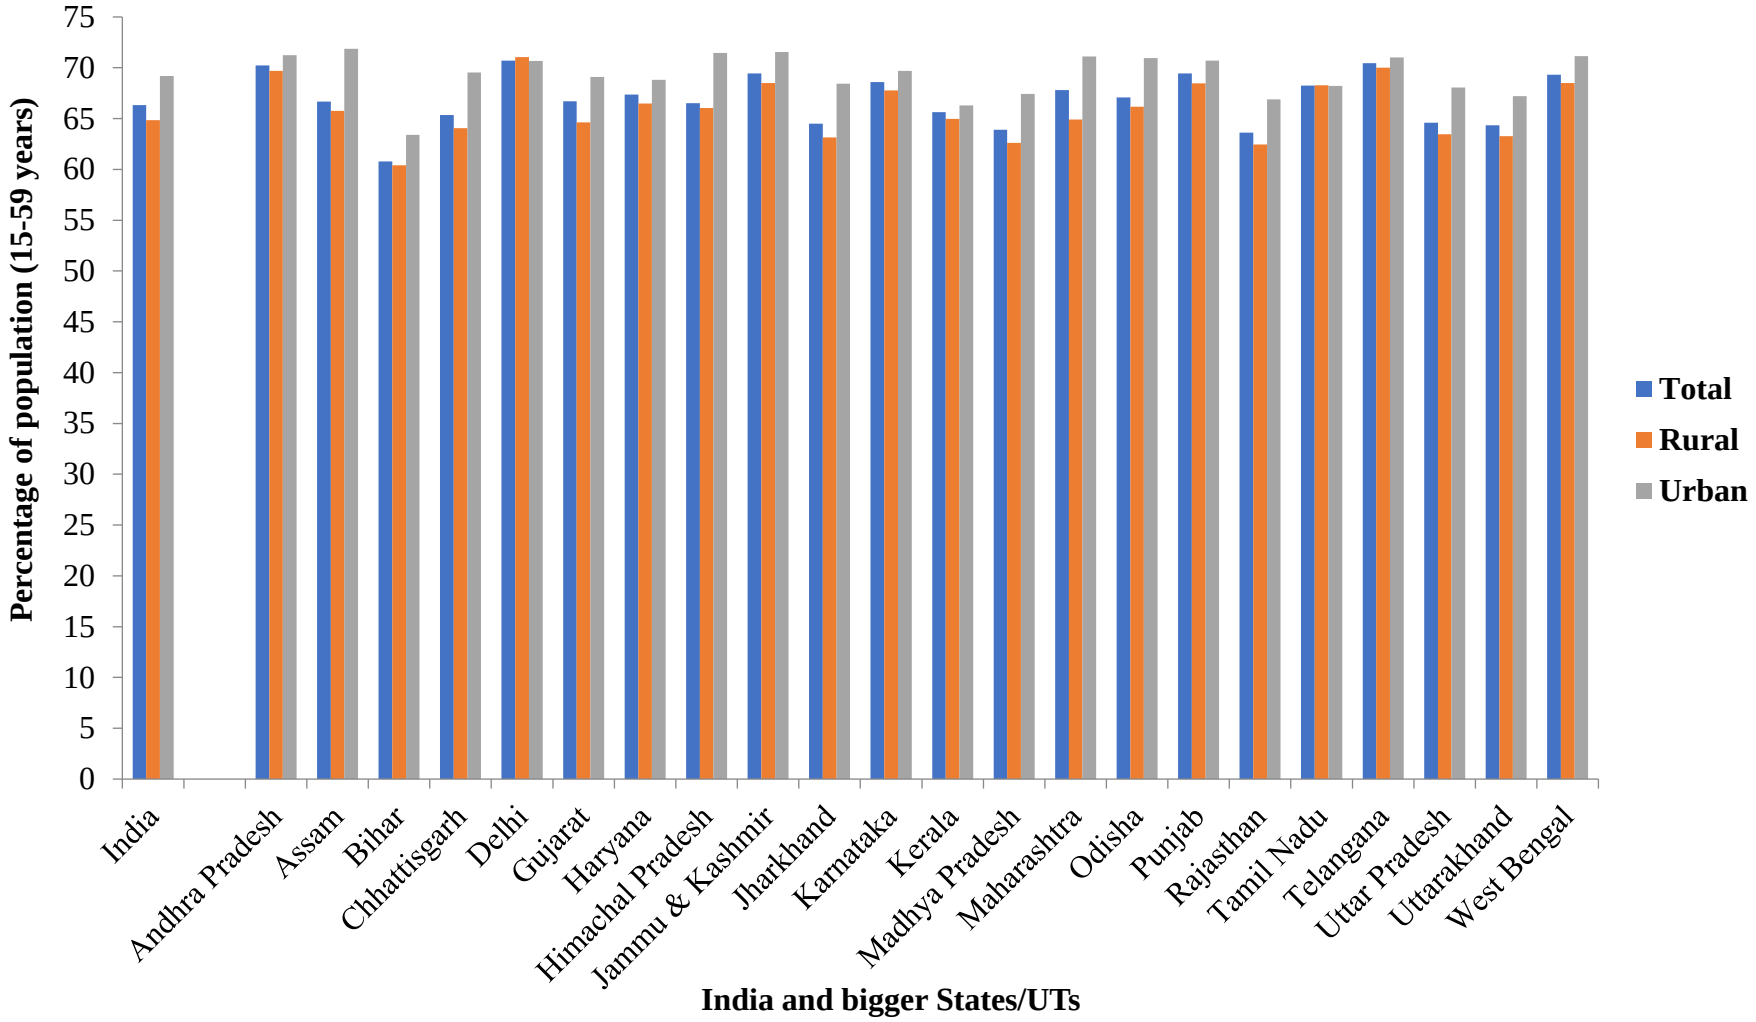

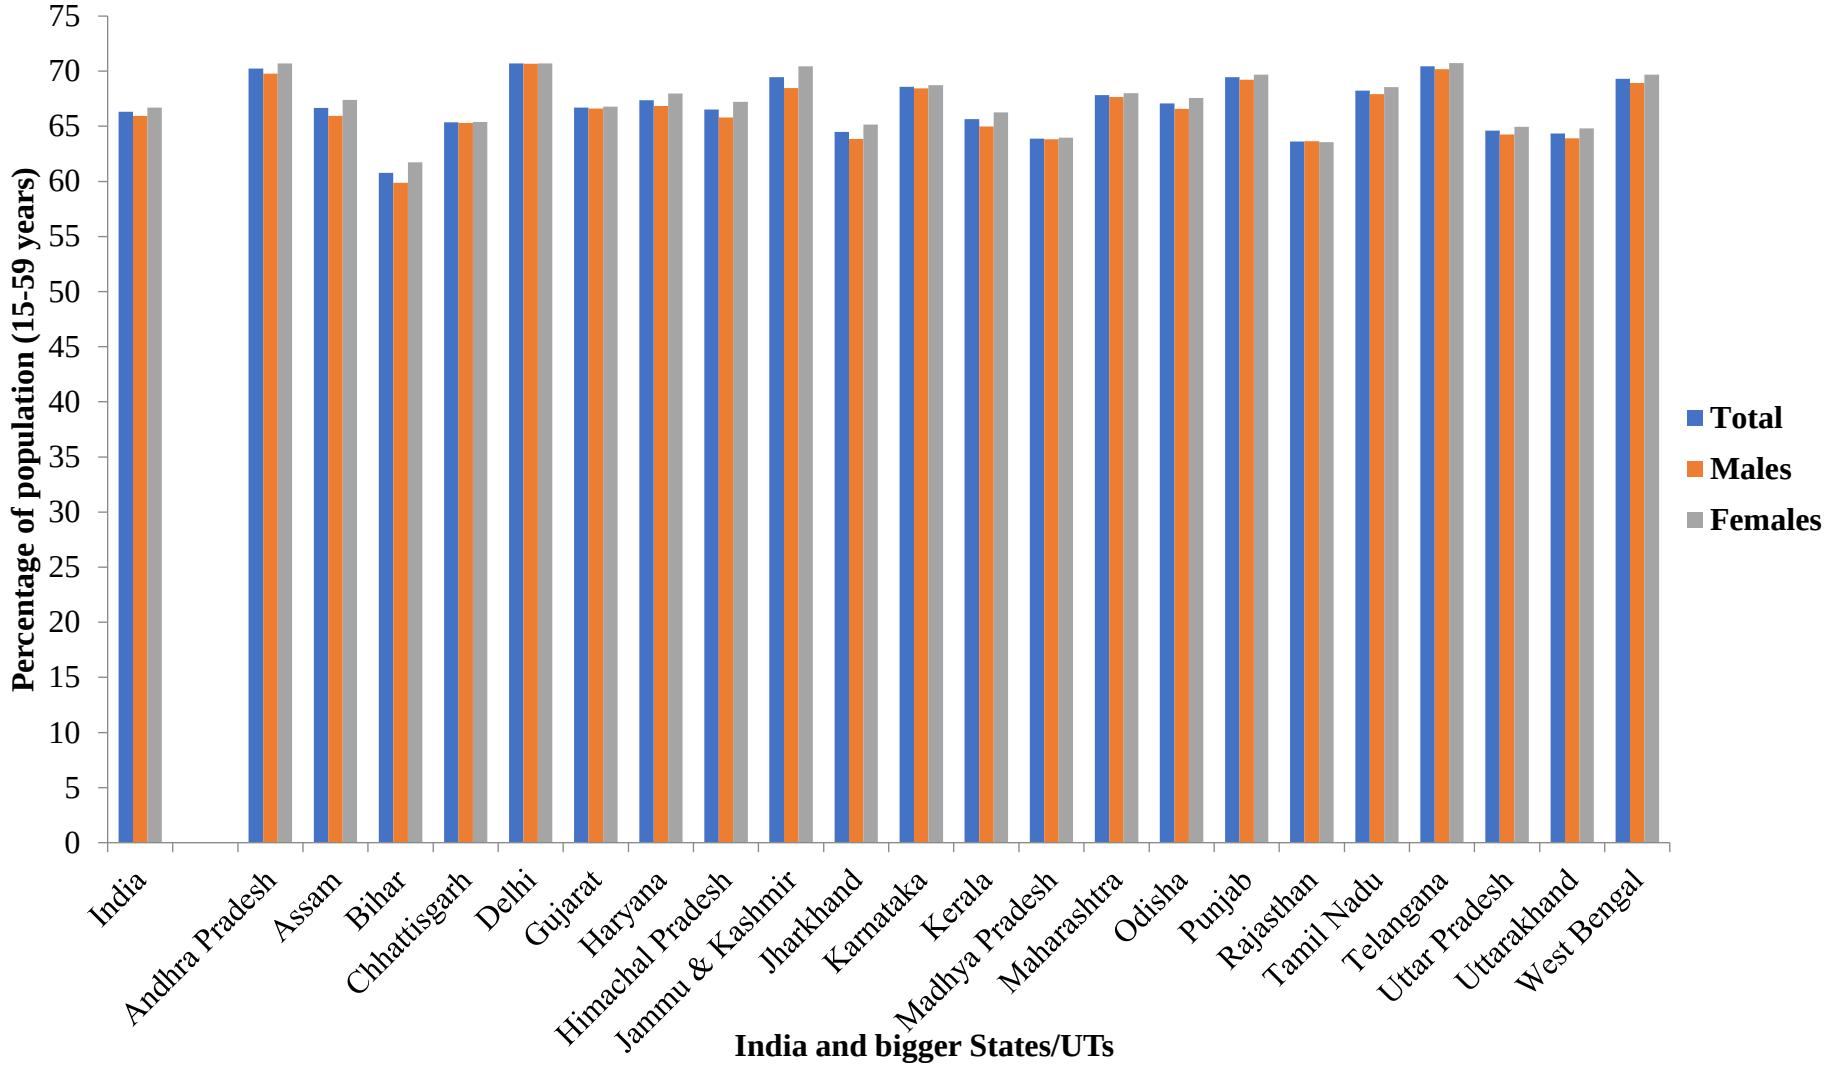

Chart 9: Percentage of population aged 15-59 years to total population by Sex, India and bigger States/UTs, 2022

2.12 Percentage of aged persons (60 years and above) for India and bigger States/UTs by Sex and Residence for the year 2022 is given below in Statement 7. At the National level, 9.0% of the total population is aged 60 years and above, with a slightly higher percentage for females (9.3%) than males (8.8%). In rural areas, 8.8% of the population is aged 60 years and above, while in urban areas, the percentage is slightly higher at 9.5%. Overall, the percentage of the population aged 60 years and above varies across different States and UTs in India, with some having a much higher proportion of elderly citizens than others.

2.13 In the bigger States/UTs, the data reveals that Kerala has the highest percentage of population in the age group of 60 years and above among all the States/UTs in India with 14.4% of the total population falling under this category. Tamil Nadu (13.1%) and Himachal Pradesh (12.3%) are the next two States with the highest percentage of elderly population. On the other hand, Bihar (6.9%), Assam (7.1%), NCT of Delhi (7.3%) and Jharkhand (7.3%) have the lowest percentage of the population in the age group of 60 years and above.

2.14 The percentage of elderly females is higher than elderly males in most States/UTs. Percentage of elderly males is highest in Kerala with 13.8% followed by Tamil Nadu (12.9%) and Himachal Pradesh (12.0%). It is lowest in Delhi and Bihar at 7.0% each. followed by Jharkhand (7.1%). In case of female, percentage of elderly population is highest in Kerala (15.0%) followed by Tamil Nadu (13.3%) and Himachal Pradesh (12.6%) and it is lowest in Bihar (6.7%) followed by Assam (6.8%). In case of rural areas, the percentage of elderly population is highest in Kerala (14.8%) followed by Himachal Pradesh (12.5%) and Odisha (11.7%). It is lowest in Bihar (6.6%) followed by Assam and Delhi at 6.8% each. In urban areas, the percentage of elderly population is highest in Tamil Nadu (14.3%) followed by Kerala (14.0%) and West Bengal (11.7%) and it is lowest in Chhattisgarh (6.6%) followed by Telangana (7.0%). The pictorial presentation of percentage of old age population by Residence and Sex for bigger States/UTs is given in Chart 10 and 11 respectively.

Chart 11: Percentage of population aged 60+ to total population by Sex, India and bigger States/UTs, 2022

Marital Status

2.15 Besides age, the other important demographic characteristic collected and subsequently updated during each half-yearly survey of the SRS is marital status. Distribution of the population by marital status is thus available from SRS.

2.16 The statement 8 presents the percentage distribution of the population by marital status and sex for India and bigger States/UTs in India in the year 2022. The data is presented in three categories: Never married, Married and Widowed/Divorced/Separated (W/D/S). For India in 2022, 51.1% of the total population had never been married, with a higher percentage among males (56.3%) than females (45.7%). On the other hand, 45.5% of the total population was reported as married, with a higher percentage among females (49.0%) than males (42.2%). The remaining 3.3% of the population was either widowed, divorced or separated, with a higher percentage among females (5.2%) than males (1.5%).

2.17 Among the bigger States/UTs, the percentage distribution of the population by marital status and sex varied considerably in 2022. For instance, Bihar and Jammu & Kashmir has the highest percentage of the never married population (58.8%), while Tamil Nadu has the lowest percentage (42.3%). The highest percentage of the population was reported as widowed, divorced or separated in Tamil Nadu (6.2%) and lowest in Bihar (1.6%). The highest and lowest percentage of married population was reported in Kerala (51.6%) and Jammu & Kashmir (39.5%). Chart 12-14 represents the distribution of population according to marital status for Persons, Males and Females respectively.

Chart 12: Percentage distribution of population by marital status, India and bigger States/UTs, 2022

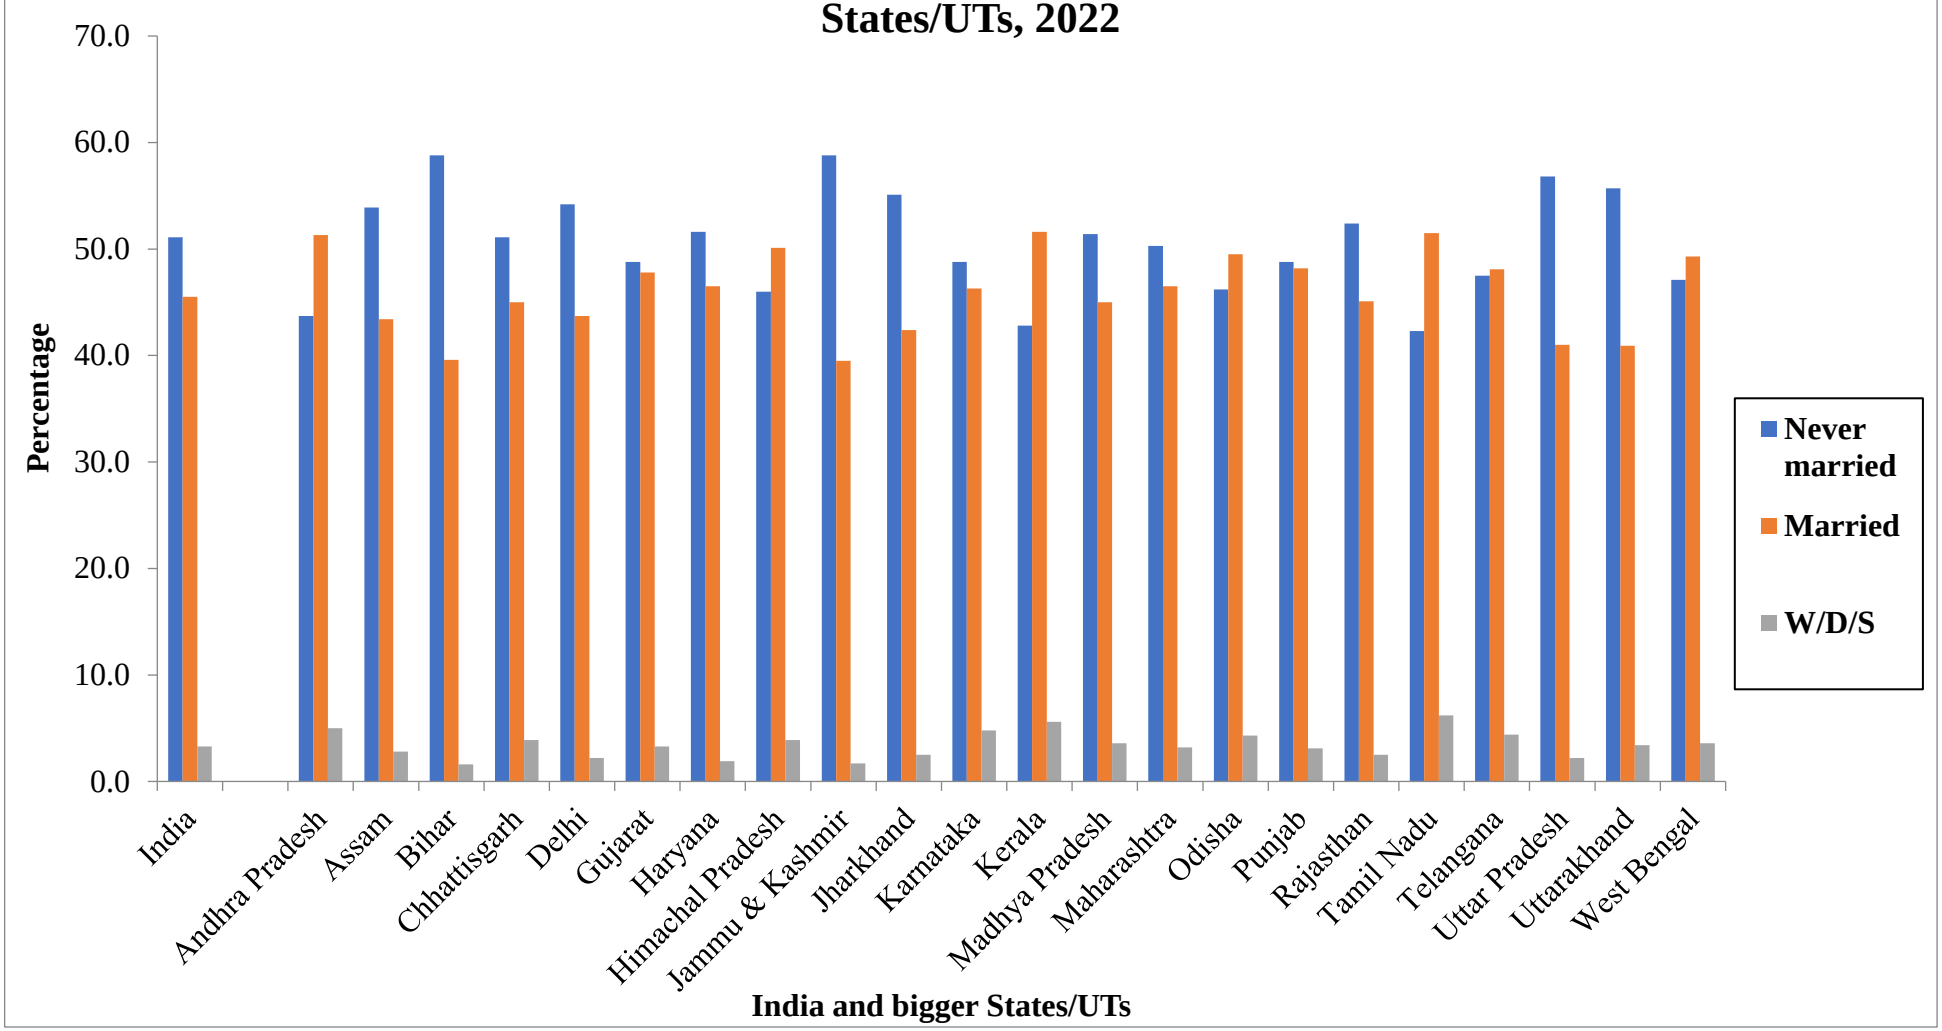

Chart 13: Percentage distribution of MALE population by marital status, India and bigger States/UTs, 2022

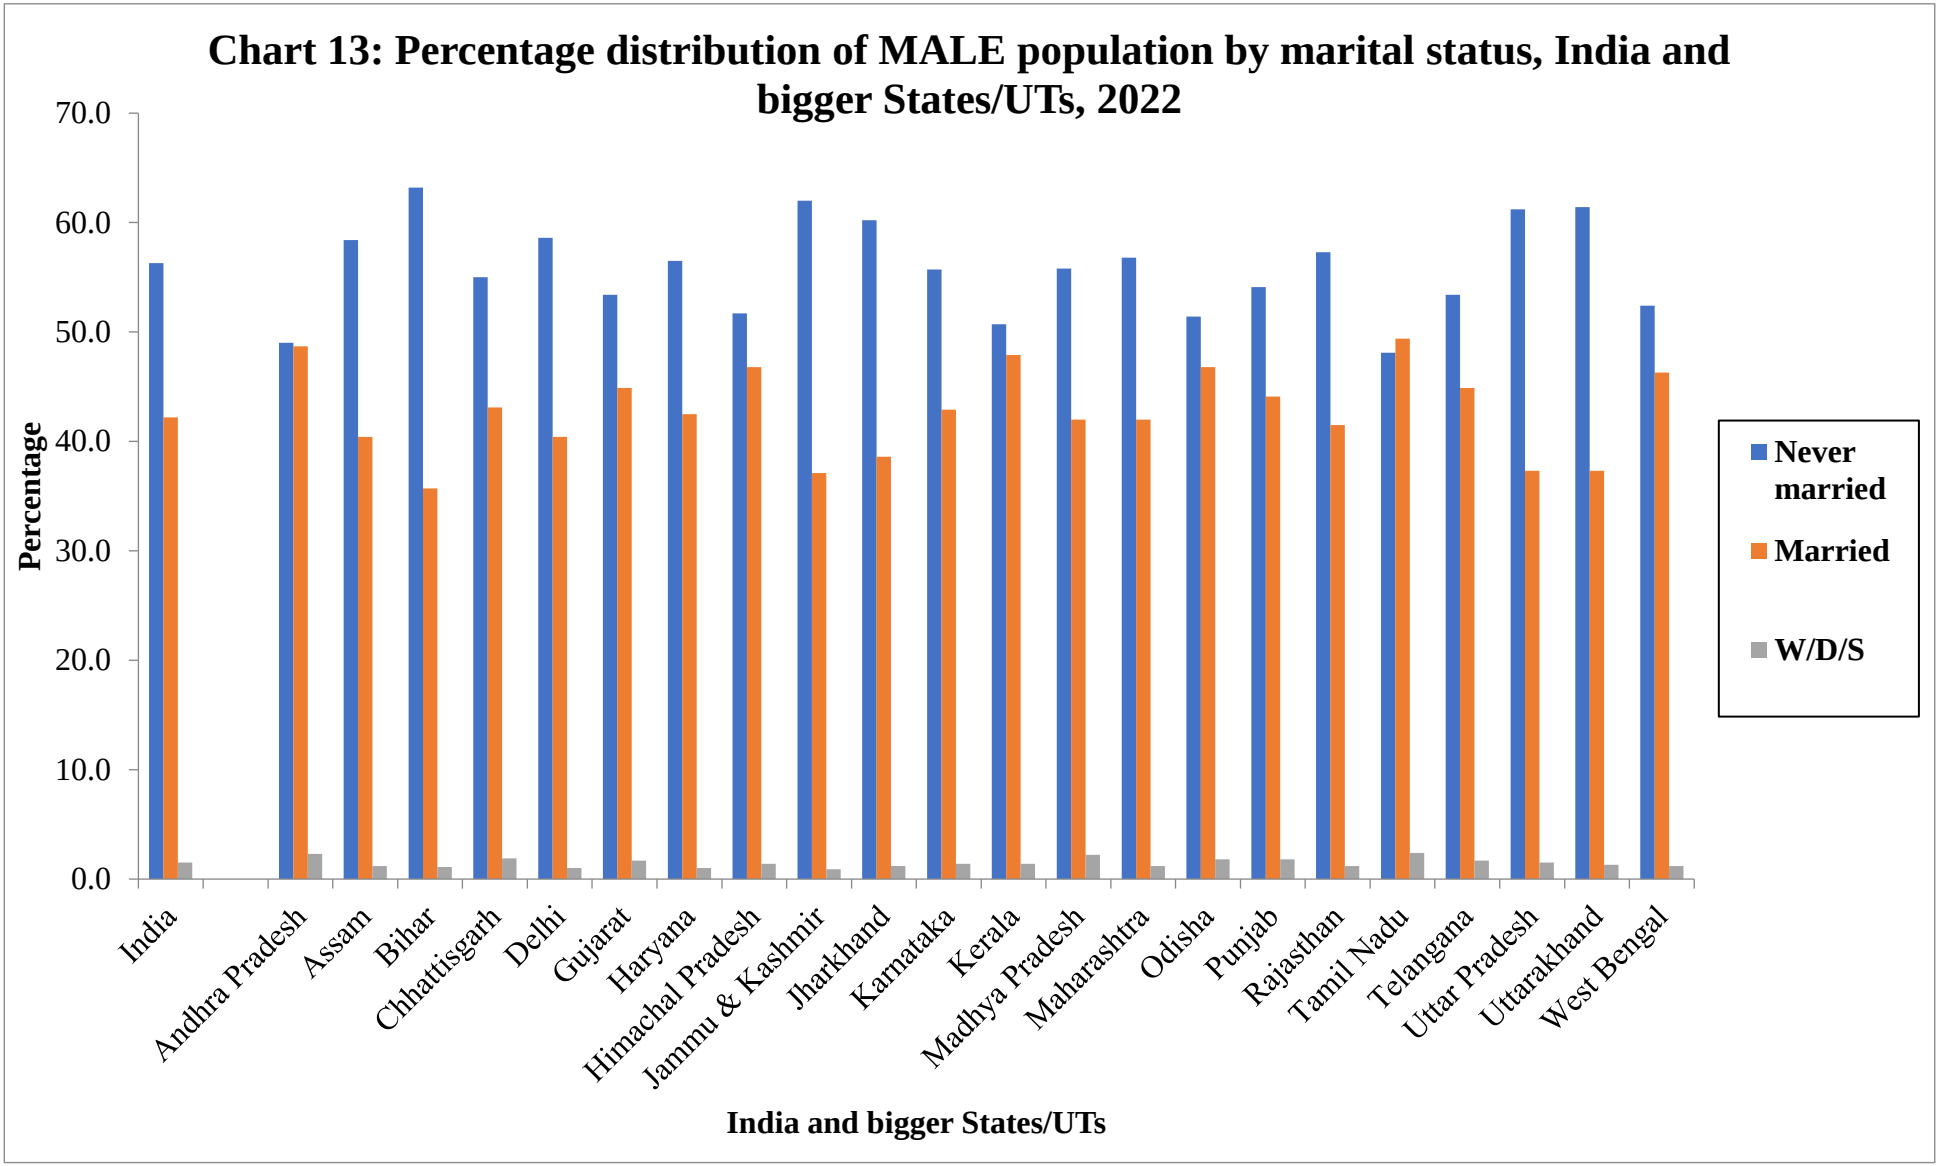

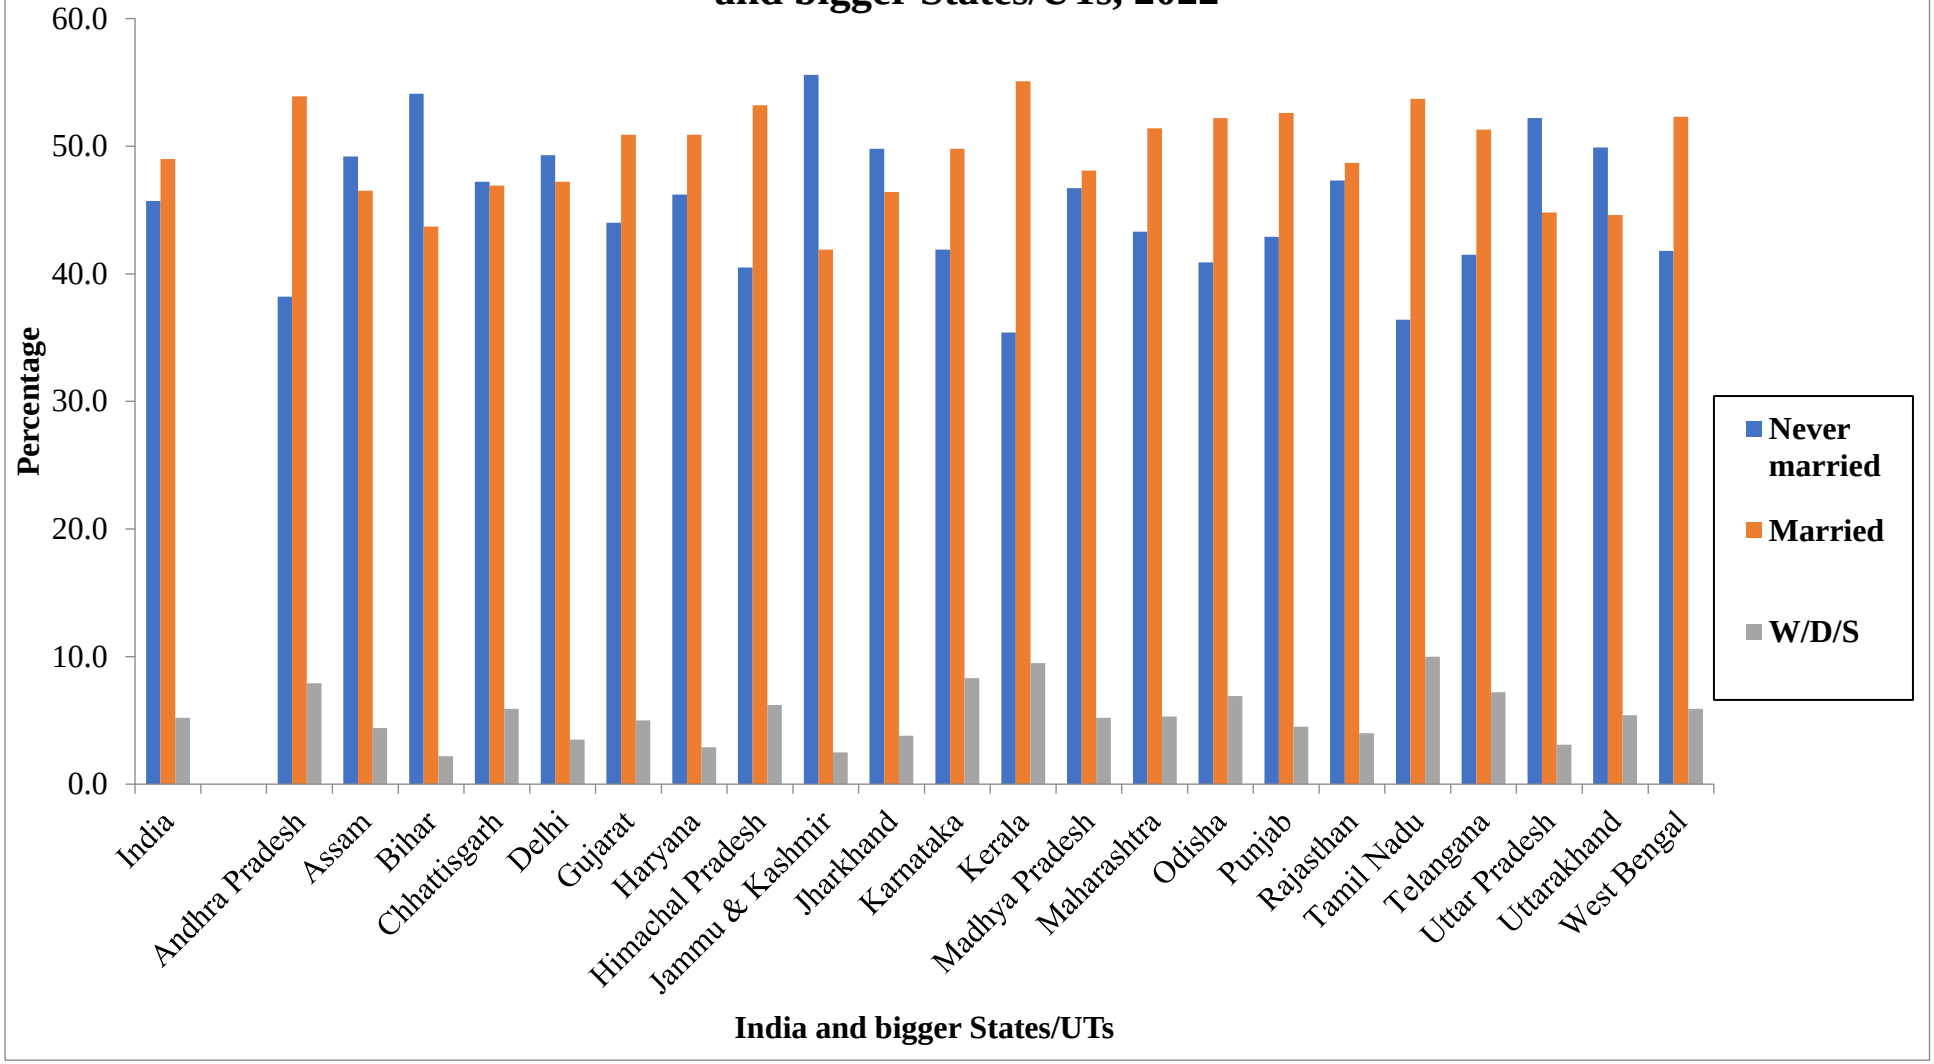

Chart 14: Percentage distribution of FEMALE population by marital status, India and bigger States/UTs, 2022

2.18 Statement 9 given below provides percentage distribution of population for age 10 years and above by Marital Status and Sex for India and bigger States/UTs for the year 2022. The data is given in terms of percentage of individuals who are never married, married and widowed/divorced/separated, divided by sex. In 2022, for India as a whole, 41.8% of the population aged 10 and above were never married, while 54.2% were married, and 4% were widowed/divorced/separated. Among males, 47.7% were never married, while 50.5% were married and 1.8% were widowed/divorced/separated. Among females, 35.7% were never married, while 58.1% were married and 6.2% were widowed/divorced/separated.

2.19 The data show some variation across the different States/UTs. For instance, the percentage of the population aged 10 and above who have never married is lowest in Kerala (34.5%) and highest in Jammu & Kashmir (52.5%) in 2022. The percentage of individuals who are married is highest in Kerala (59.1%) and lowest in Jammu & Kashmir (45.6%). The percentage of individuals who are widowed/divorced/separated is highest in Tamil Nadu ((7.0%) and lowest in Jammu & Kashmir (2.0%).

2.20 The percentage of males above 10 years who were never married in 2022 is highest in Jammu and Kashmir (55.8%) and lowest in Tamil Nadu (41.0%). The percentage of married males during 2022 is found to highest in Tamil Nadu (56.2%) and lowest in Jammu & Kashmir (43.1%). The widowed/divorced/separated status in case of males is highest in Tamil Nadu (2.8%) and lowest in Delhi and Jammu & Kashmir (1.1%). In case of females, the highest percentage of never married is found in Jammu & Kashmir (49.1%) and lowest in Kerala (26.7%). The highest proportion of married females is found in Kerala (62.6%) and lowest in Jammu & Kashmir (48.1%). The widowed/divorced/separated status in case of females is highest in Tamil Nadu (11.3%) and lowest in Bihar (2.8%). Chart 15, 16 and 17 shows the distribution of population aged 10 years and above by marital status of India and bigger States/UTs for Person, Male and Female respectively.

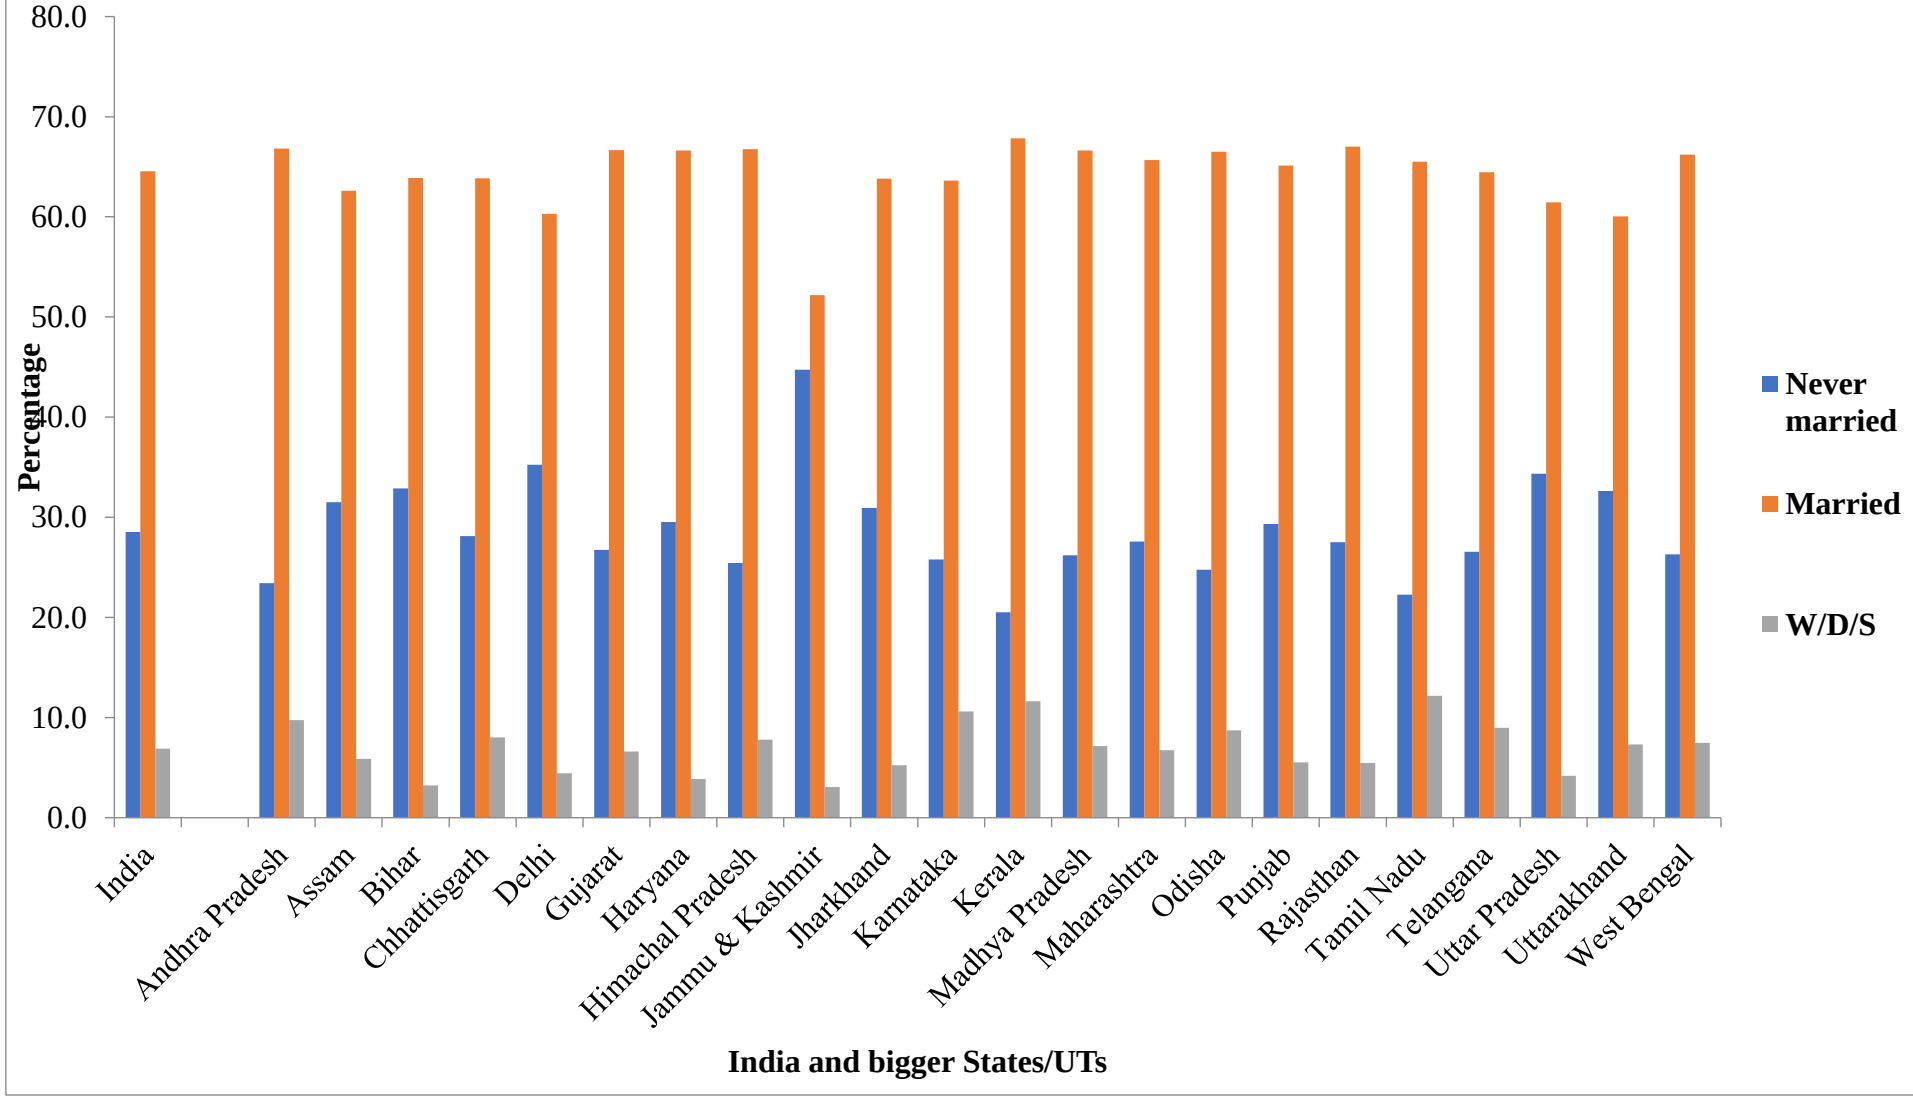

Chart 21: Percentage distribution of Rural female population aged 15+ years by marital status, India and bigger States/UTs, 2022

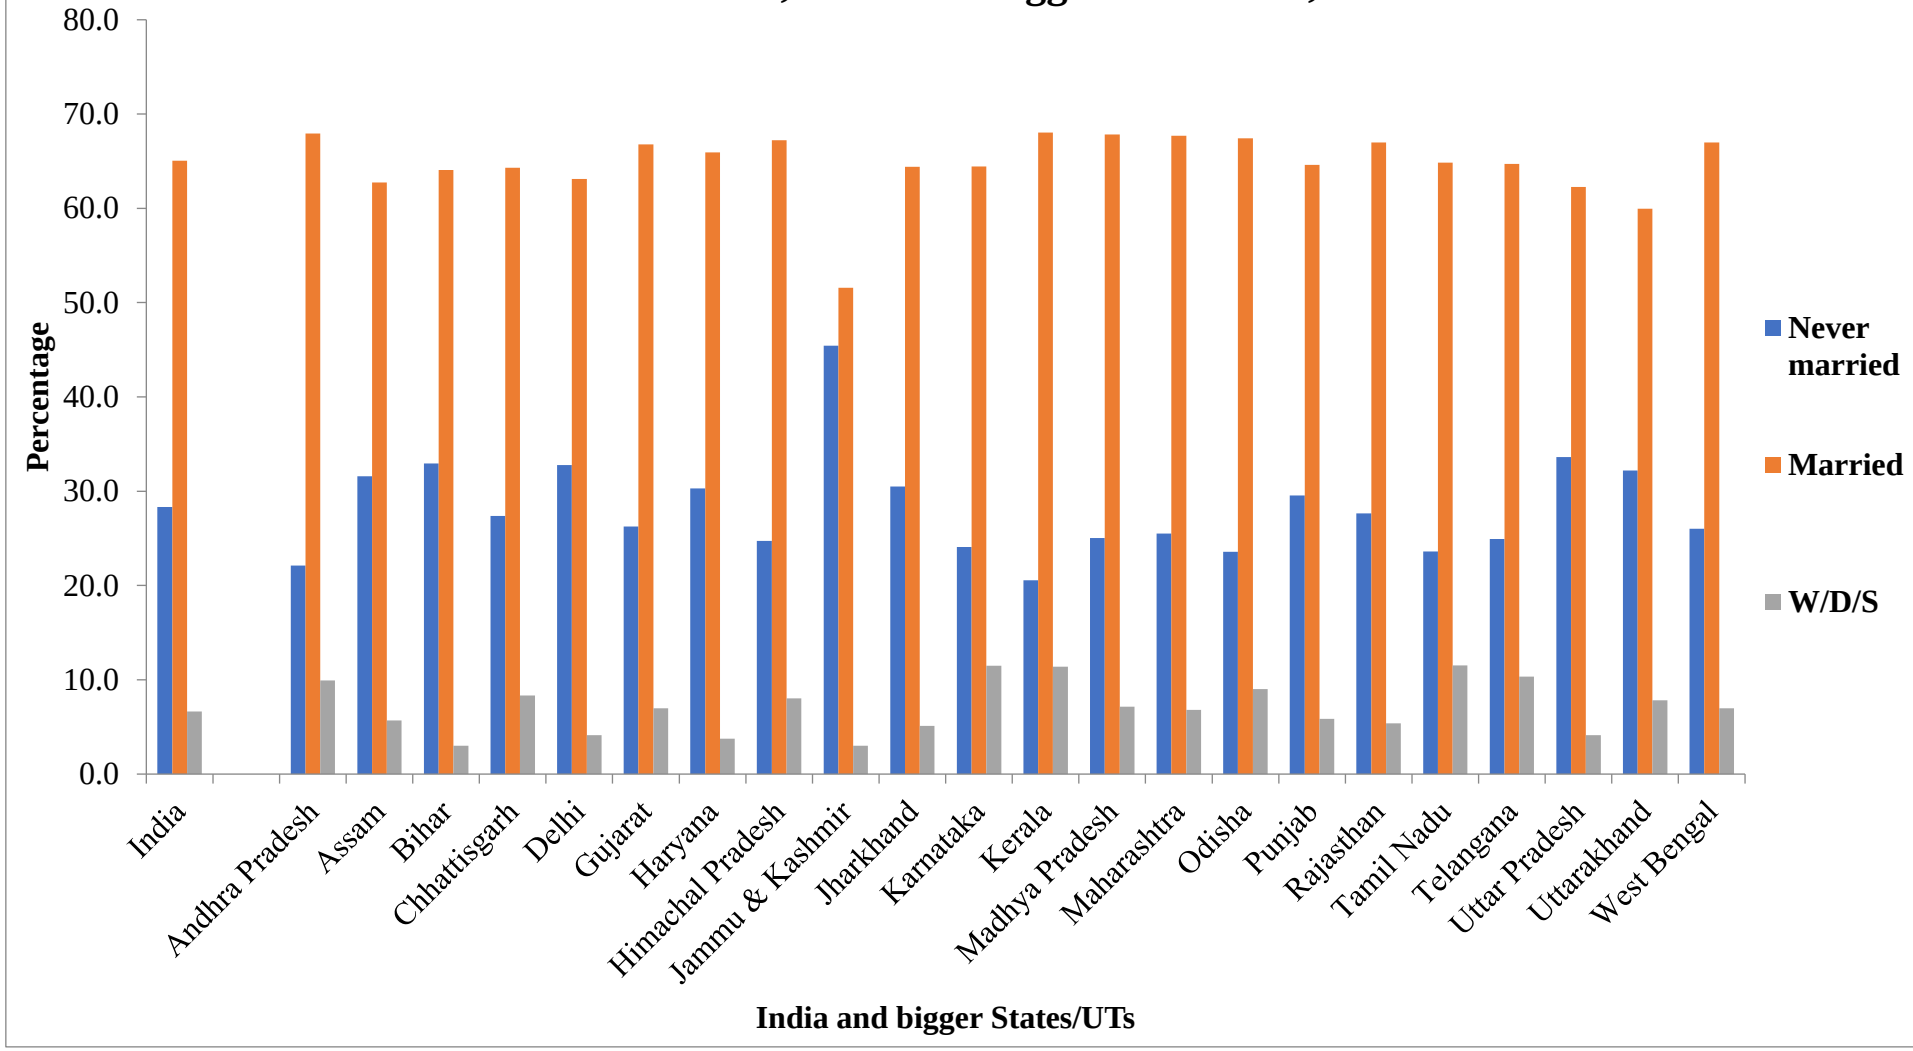

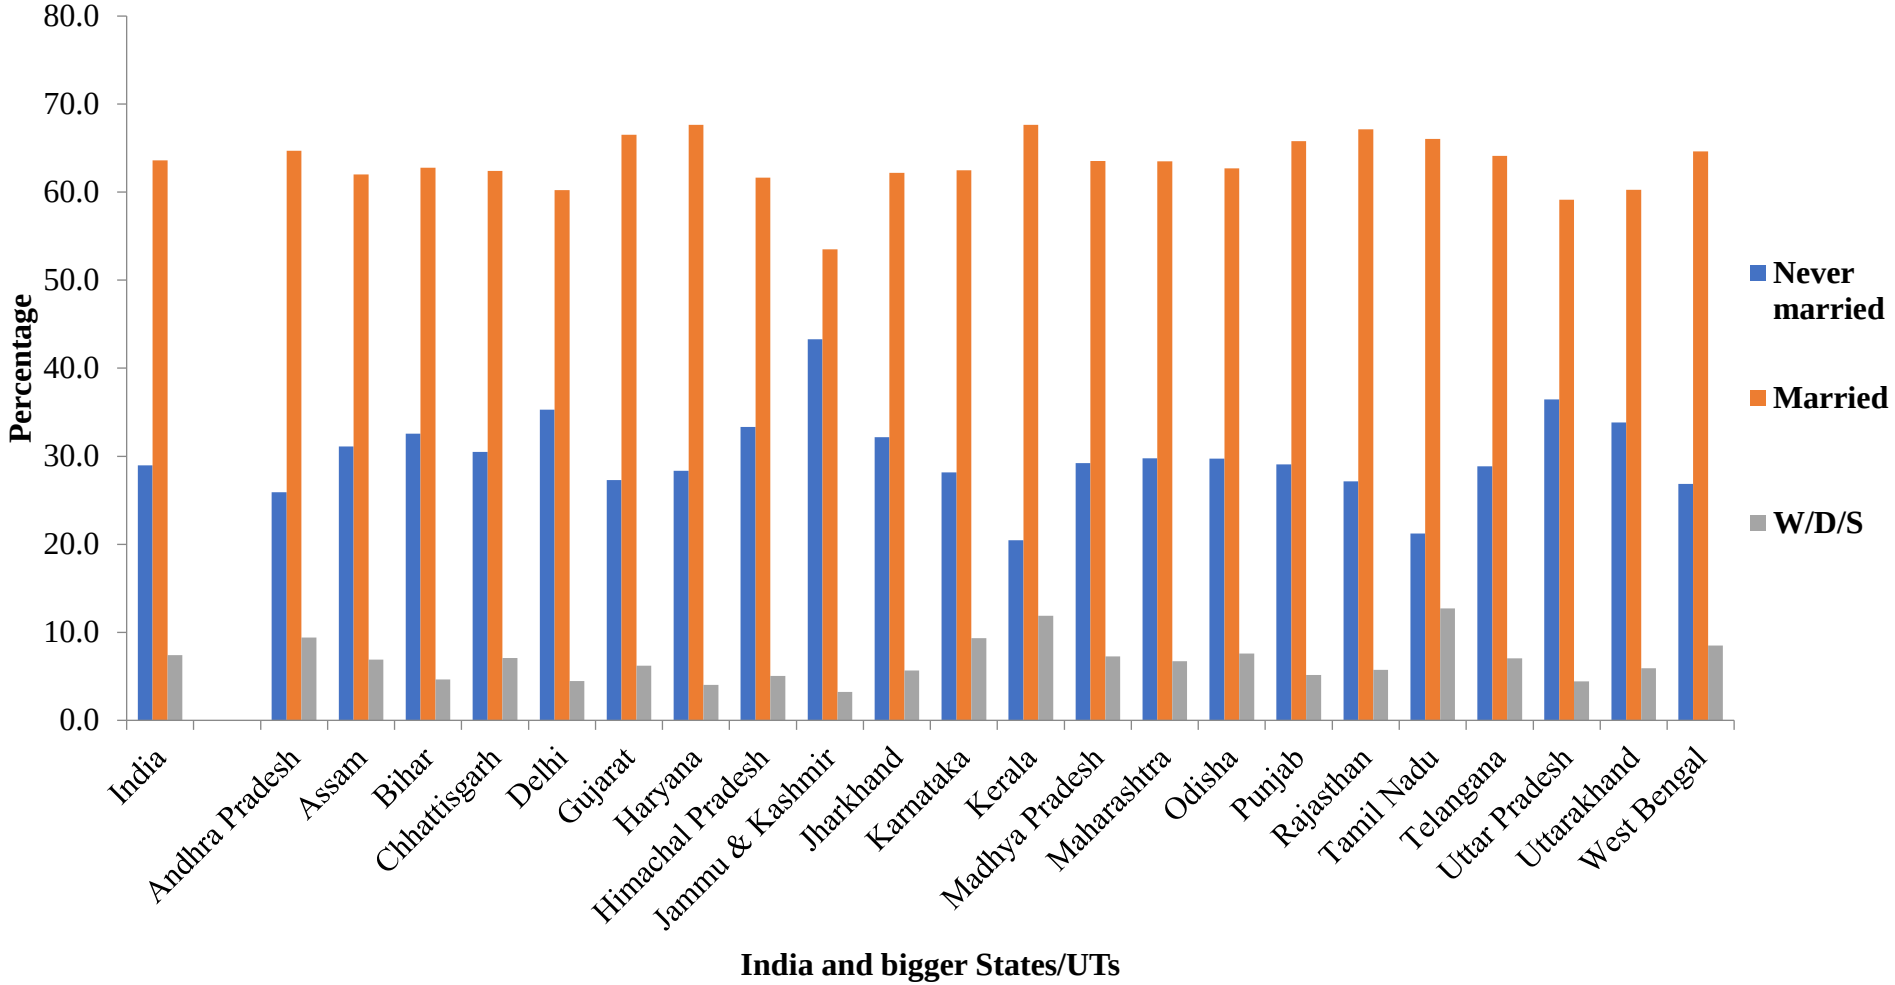

Chart 22: Percentage distribution of Urban female population aged 15+ years by marital status, India and bigger States/UTs, 2022

2.25 In addition to the marital status of males and females, information on the number of females who got effectively married during the reference period of six months of each half yearly survey is also being collected in the SRS from 1990. Based on the information on the number of females who got effectively married during the last one year, mean age at effective marriage for females has been worked out. Statement 12 given below presents the percentage distribution of such females by age at effective marriage separately for rural and urban areas in three categories, before the age of 18, between 18-20 years and at age of 21 or above.

2.26 For India as a whole, 2.3% of females got married before the age of 18, 27.0% got married between the ages of 18-20 and 70.6% got married at the age of 21 or above. In rural areas, the percentages are 2.7%, 30.1% and 67.3% respectively, while in urban areas, they are 1.6%, 19.4% and 79.0% respectively.

2.27 Among the major States and Union Territories, the percentage of females getting married before the age of 18 is the highest in West Bengal (6.5%) followed by Jharkhand (5.0%) and is lowest in Kerala (0.2%) followed by Haryana and Himachal Pradesh (0.7%) respectively. The percentage of females getting married between the ages of 18-20 is the highest in West Bengal (47.7%) followed by Jharkhand (43.8%) and the lowest in Jammu & Kashmir (10.7%). The percentage of females getting married at the age of 21 or above is the highest in Jammu & Kashmir (88.1%) followed by Haryana (85.9%) and the lowest in West Bengal (45.9%) followed by Jharkhand (51.2%).

2.28 In case of rural areas, percentage of female getting married before age of 18 is highest in West Bengal (5.8%) followed by Jharkhand (5.7%) and is lowest in Delhi (0.0%) followed by Kerala (0.3%). In case of urban areas, percentage of female getting married before age of 18 is highest in West Bengal (8.3%) followed by Jammu & Kashmir (3.6%) and Odisha (3.4%) and is lowest in Himachal Pradesh and Kerala (0.0%) followed by Andhra Pradesh and Karnataka (0.4%).Charts 23, 24 and 25 show the distribution of females, who got effectively married during the last one year, by age at effective marriage of India and bigger States/UTs for Total, Rural and Urban areas respectively.

Chart 23: Percentage of Females by age at Effective Marriage, India and bigger States/UTs, 2022

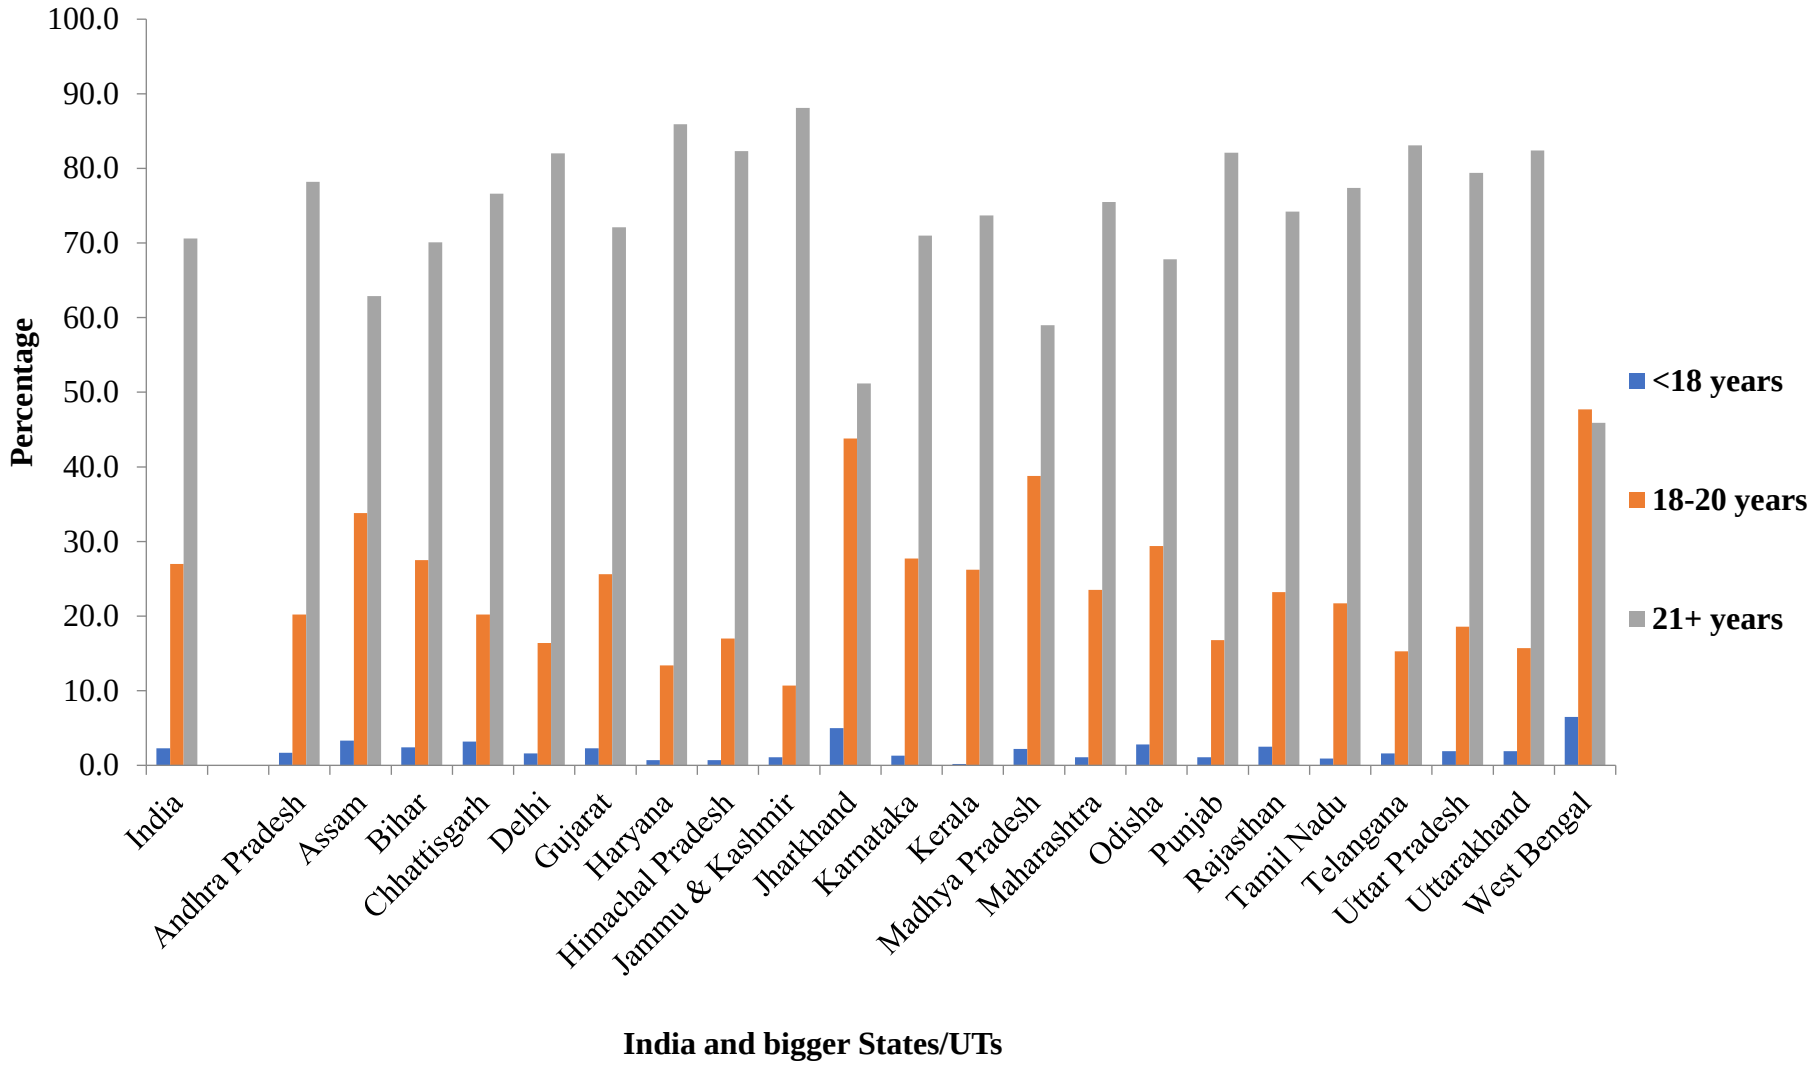

Chart 24: Percentage of Females by age at Effective Marriage, India and bigger States/UTs, 2022 - RURAL

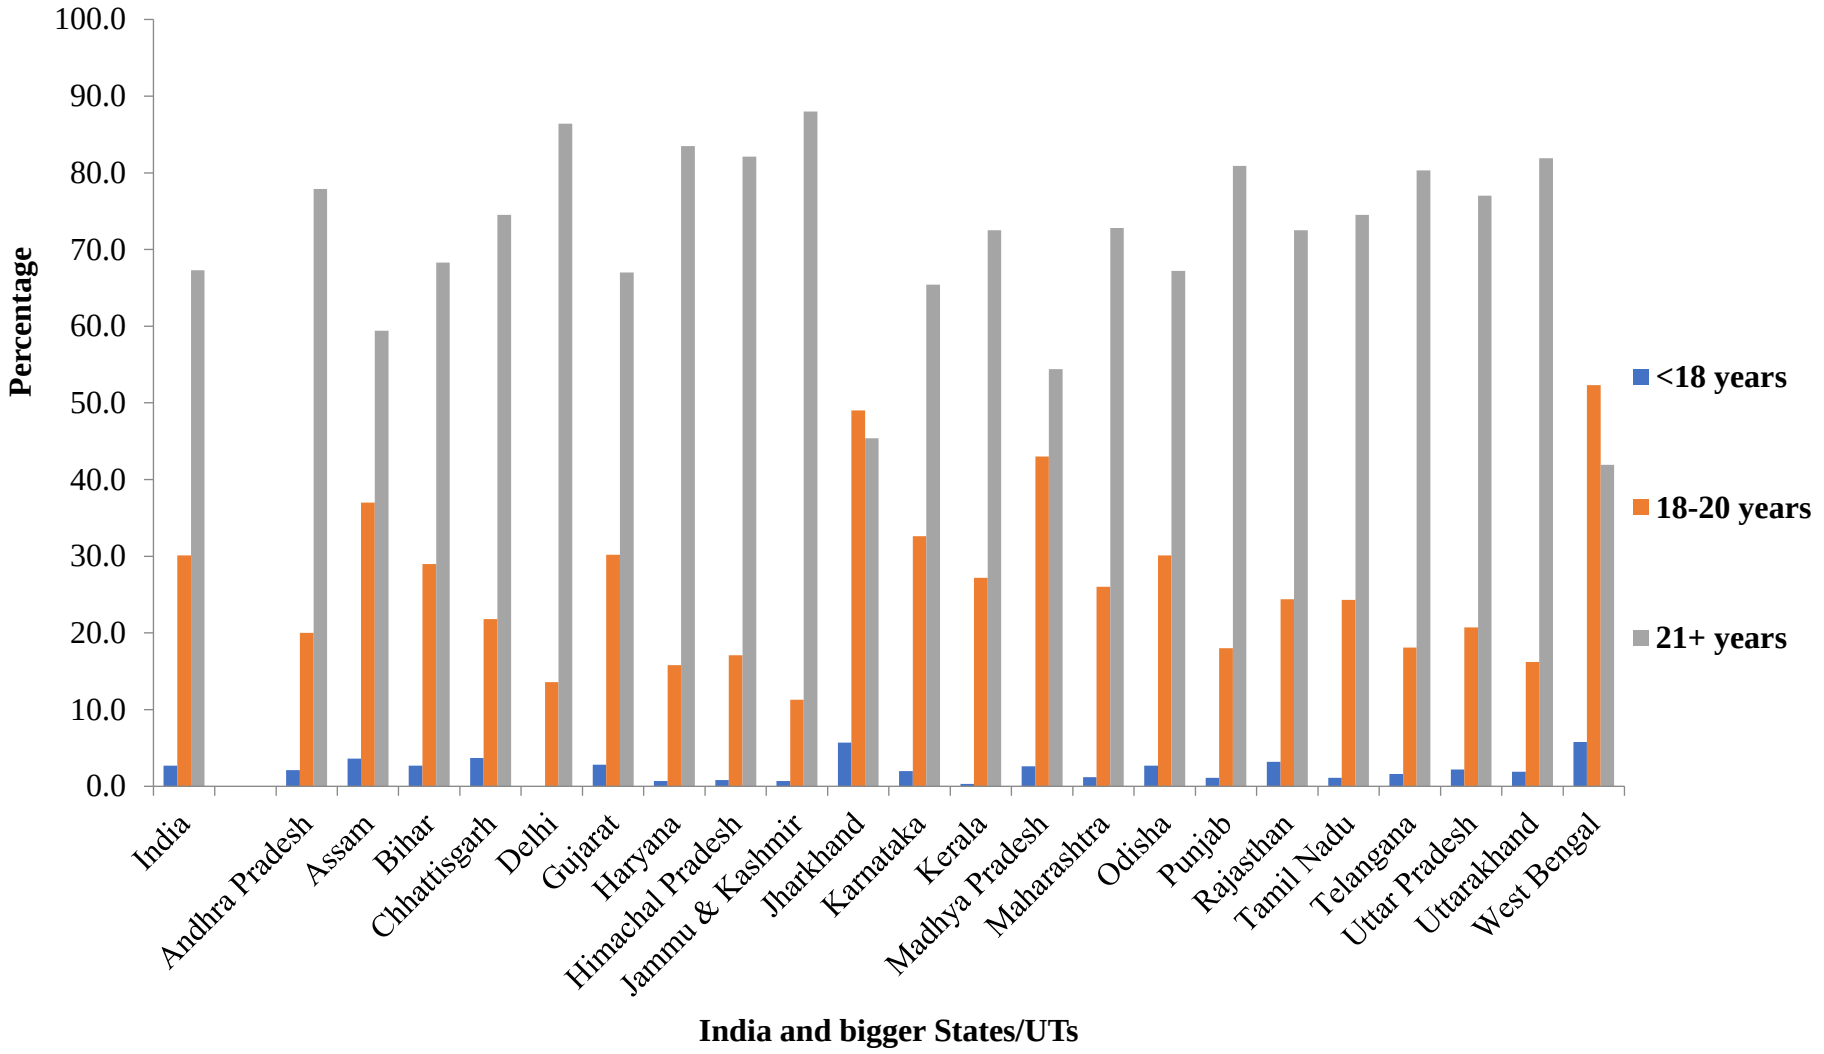

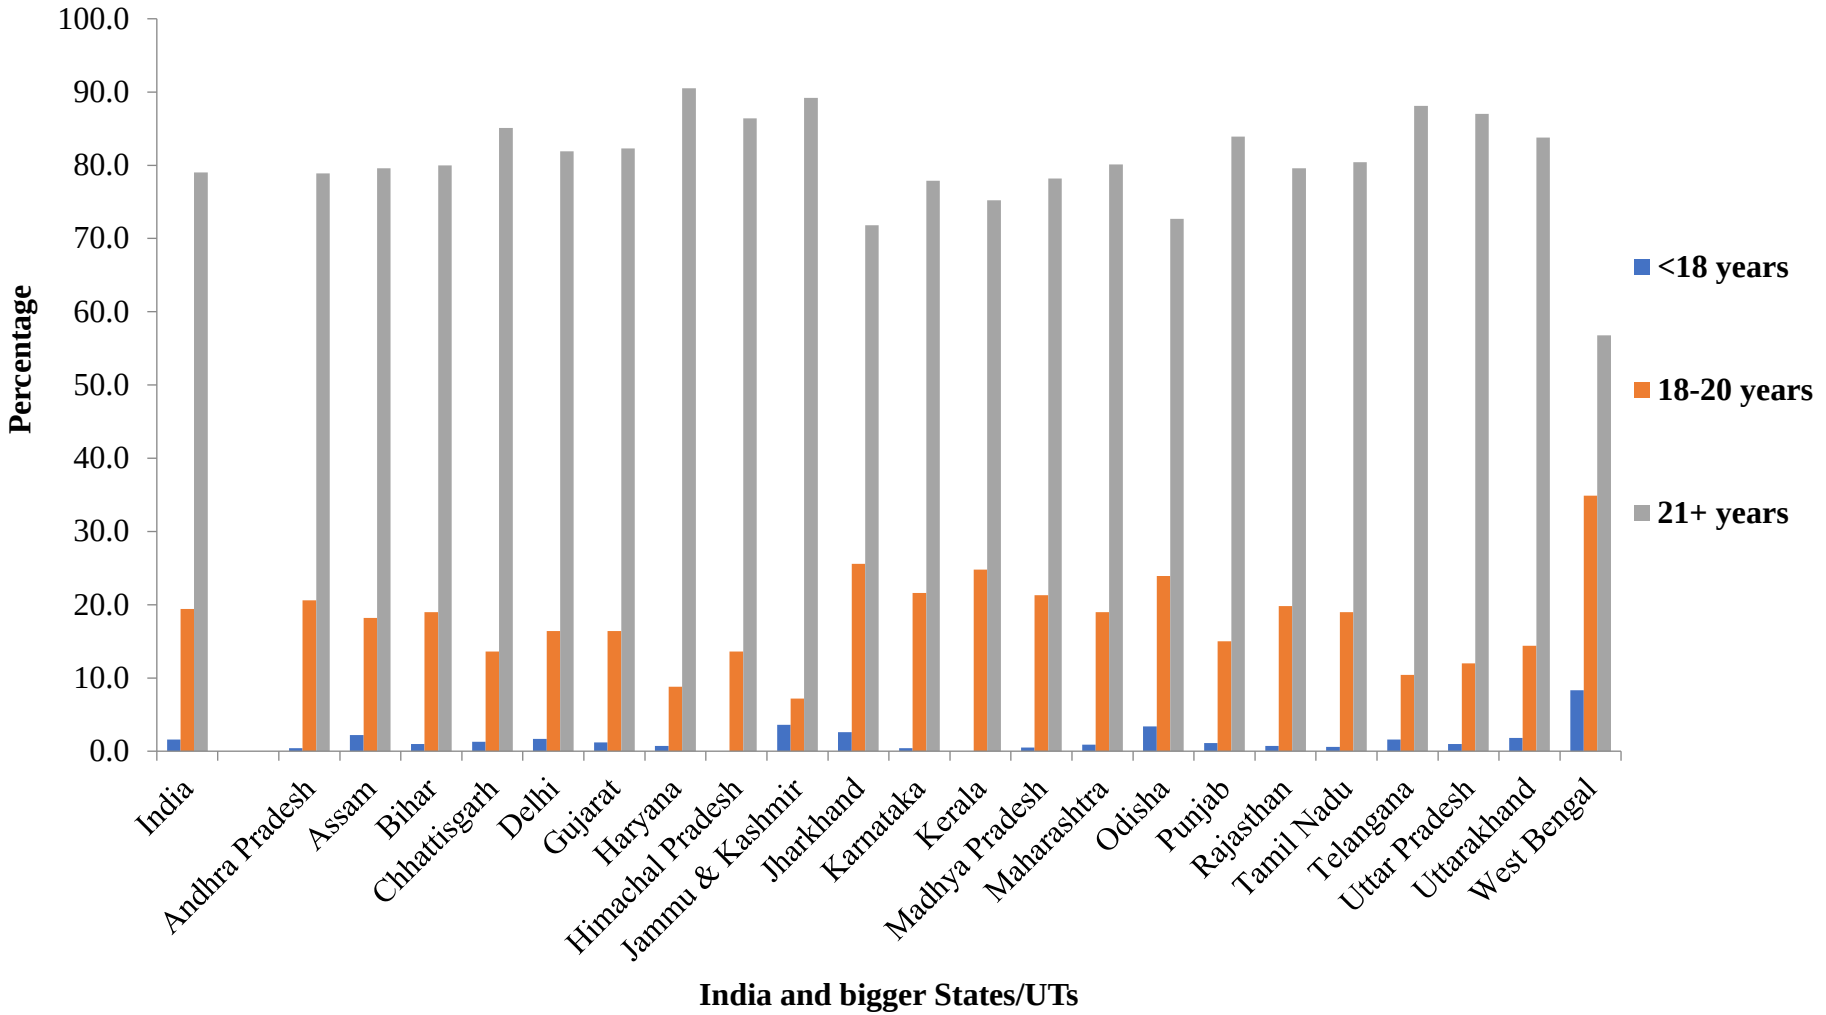

Chart 25: Percentage of Females by age at Effective Marriage, India and bigger States/UTs, 2022 - URBAN

2.29 Statement 13 given below provides the mean age at effective marriage of the females by residence for India and bigger States/UTs in 2022. The data is divided into age groups of less than 18, 18-20, 21+, and all ages. The mean age at effective marriage for females in India is 22.7 years. This means that, on an average, females in India get married at the age of 22.7 years. There is a significant difference in the mean age at effective marriage between rural (22.2 years) and urban areas (23.9 years). In both India and individual States, the mean age at effective marriage is higher in urban areas than in rural areas.

2.30 In most States/UTs, the majority of females get married after the age of 18. However, in some States/UT such as West Bengal, Jharkhand and Assam, a significant proportion of females get married before the age of 18. The mean age at effective marriage also varies widely across States, ranging from 21.1 years in West Bengal to 25.4 years in Jammu & Kashmir.

2.31 It can be observed that the mean age at effective marriage for females is highest in the urban areas compared to rural areas for most States/UTs. In case of rural areas, the mean age at effective marriage is highest in Jammu & Kashmir (25.5 years) followed by Himachal Pradesh (24.2 years) and Punjab (24.1 years) for all ages, while it is lowest in West Bengal (20.7 years), Jharkhand (20.8 years) and Madhya Pradesh (21.4 years). In case of Urban areas, the mean age at effective marriage is highest in Punjab (25.1 years) followed by Himachal Pradesh, Assam and Chhattisgarh at 24.9 years and Maharashtra (24.7 years) for all ages, while it is lowest in West Bengal (22.0 years), Rajasthan (23.0 years) and Bihar and Jharkhand (23.1 years). Charts 26, 27 and 28 show the distribution of females, who got married in the last one year, by age at effective marriage of India and bigger States/UTs for Total, Rural and Urban areas respectively.

CHAPTER 3

ESTIMATES OF FERTILITY INDICATORS

SRS has been providing data for estimating various fertility measures since its inception. The fertility indicators considered in this chapter are Crude Birth Rate, General Fertility Rate, Age-Specific Marital Fertility Rates, Total Marital Fertility Rates and Gross Reproduction Rate. Apart from this, the chapter includes Sex Ratio at Birth. To examine the changes in the levels of fertility during the last decade, the average values of these fertility indicators for the years 2020-22 are compared with that for 2010-12.

3.2 The Crude Birth Rate (CBR) at all India level had declined from 36.9 in 1971 to 33.9 in 1981, registering a fall of about 8 per cent. In the next three decades ending 1991, 2001 and 2011, the Crude Birth Rate reached 29.5, 25.4 and 21.8 respectively. In the last decade during 2011-2022, there was around 12 per cent decline in Crude Birth Rate, from 21.8 in 2011 to 19.1 in 2022. The CBR has been continued to be higher in rural areas compared to urban areas, though the rural-urban differential in CBR has narrowed down over these years, from a difference of 8.6 in 1981 to 5.3 in 2022.

3.3 The Total Fertility Rate (TFR) has declined from 5.2 to 4.5 during 1971 to 1981 and from 3.6 to 2.0 during 1991 to 2022. The TFR in rural areas has declined from 5.4 to 2.2 from 1971 to 2022 whereas the corresponding decline in urban areas has been from 4.1 to 1.6 during the same period. In 2022, around 94.3 percent of the deliveries were institutional which includes Government as well as private hospitals. The percentage of institutional deliveries in urban areas was 97.0 as against about 93.5 percent recorded in rural areas. The data on most of the fertility indicators have been presented by age, sex and residence for all bigger States/UTs and India. This chapter also includes data on fertility by level of education, order of birth, birth interval and medical attention at the time of birth.

3.4 Apart from the fertility indicators at State and National levels, the SRS report 2022 also provides estimates of birth rates at Sub-State, viz. NSS Natural Division Level. NSS Natural Divisions have been formed taking into consideration the geography of the State and by grouping contiguous districts having similar topography, population density, cropping pattern and rainfall etc. Table 11 of this report contains data on the birth rate besides Death and Infant Mortality Rate for 71 Natural Divisions of 22 bigger States/UTs.

3.5 The following Statement 14 provides the Crude Birth Rate (CBR) by residence for India and States/UTs for the year 2022. Although the birth rate has been estimated for all the States/UTs of India, the other fertility indicators are presented only for Bigger States/UTs in the report. The CBR for India was 19.1 in 2022, with a higher rate in rural areas (20.8) compared to urban areas (15.5). Among the Bigger States/UTs, Bihar had the highest CBR of 26.9, followed by Uttar Pradesh (24.2) and Rajasthan (23.8). The lowest CBR in this group was in Tamil Nadu (12.1) followed by Kerala (12.4) and Delhi (13.3).

3.6 Among the Smaller States, Meghalaya had the highest CBR of 23.0, whereas the lowest CBR in this group was in Goa (10.9). Among the Smaller UTs, Dadra and Nagar Haveli and Daman and Diu had the highest CBR of 16.6 and lowest CBR in this group was in A & N Islands (10.2). Based on the figures in the Statement 14 given below, the graphical representation of Crude Birth

Rate of States/UTs by residence is depicted in Chart 29. Chart 30 gives the distribution of States/UTs by values of birth rate for rural and urban areas.

Statement 14

CBR (Crude Birth Rate) by Residence, India and States/UTs, 2022

India and States/UTs	Total	Rural	Urban
India	**19.1**	**20.8**	**15.5**
Bigger States/UTs			
Andhra Pradesh	15.7	16.2	14.7
Assam	20.4	21.6	13.9
Bihar	26.9	27.6	21.9
Chhattisgarh	22.8	24.5	17.4

Haryana	19.3	20.6	17.4
Himachal Pradesh	14.5	14.9	9.7
Jammu & Kashmir	15.3	16.6	12.5
Jharkhand	21.2	22.7	16.9
Karnataka	15.8	16.8	14.5
Kerala	12.4	12.3	12.6
Madhya Pradesh	23.3	25.1	18.2
Maharashtra	14.7	15.2	14.0
Odisha	16.5	17.4	12.5
Punjab	14.3	14.8	13.5
Rajasthan	23.8	24.9	20.8
Tamil Nadu	12.1	12.6	11.7
Telangana	16.5	17.0	16.0
Uttar Pradesh	24.2	25.1	21.3
Uttarakhand	17.1	17.8	15.3
West Bengal	14.5	15.8	11.5
Smaller States			
Arunachal Pradesh	17.0	17.4	14.9
Goa	10.9	10.6	11.1
Manipur	13.3	13.5	12.9
Meghalaya	23.0	25.1	13.5
Mizoram	14.4	17.1	11.6
Nagaland	14.1	14.4	13.5
Sikkim	14.9	13.4	17.2
Tripura	15.6	16.0	14.8
Smaller UTs			
A & N Islands	10.2	10.3	10.1
Chandigarh	11.5	15.1	11.5
Dadra and Nagar Haveli and Daman and Diu	16.6	16.2	16.8
Ladakh	15.2	16.1	11.7
Lakshadweep	13.6	19.7	12.0
Puducherry	12.4	11.9	12.5

Chart 29: CBR (Crude Birth Rate) by Residence, India and States/UTs, 2022

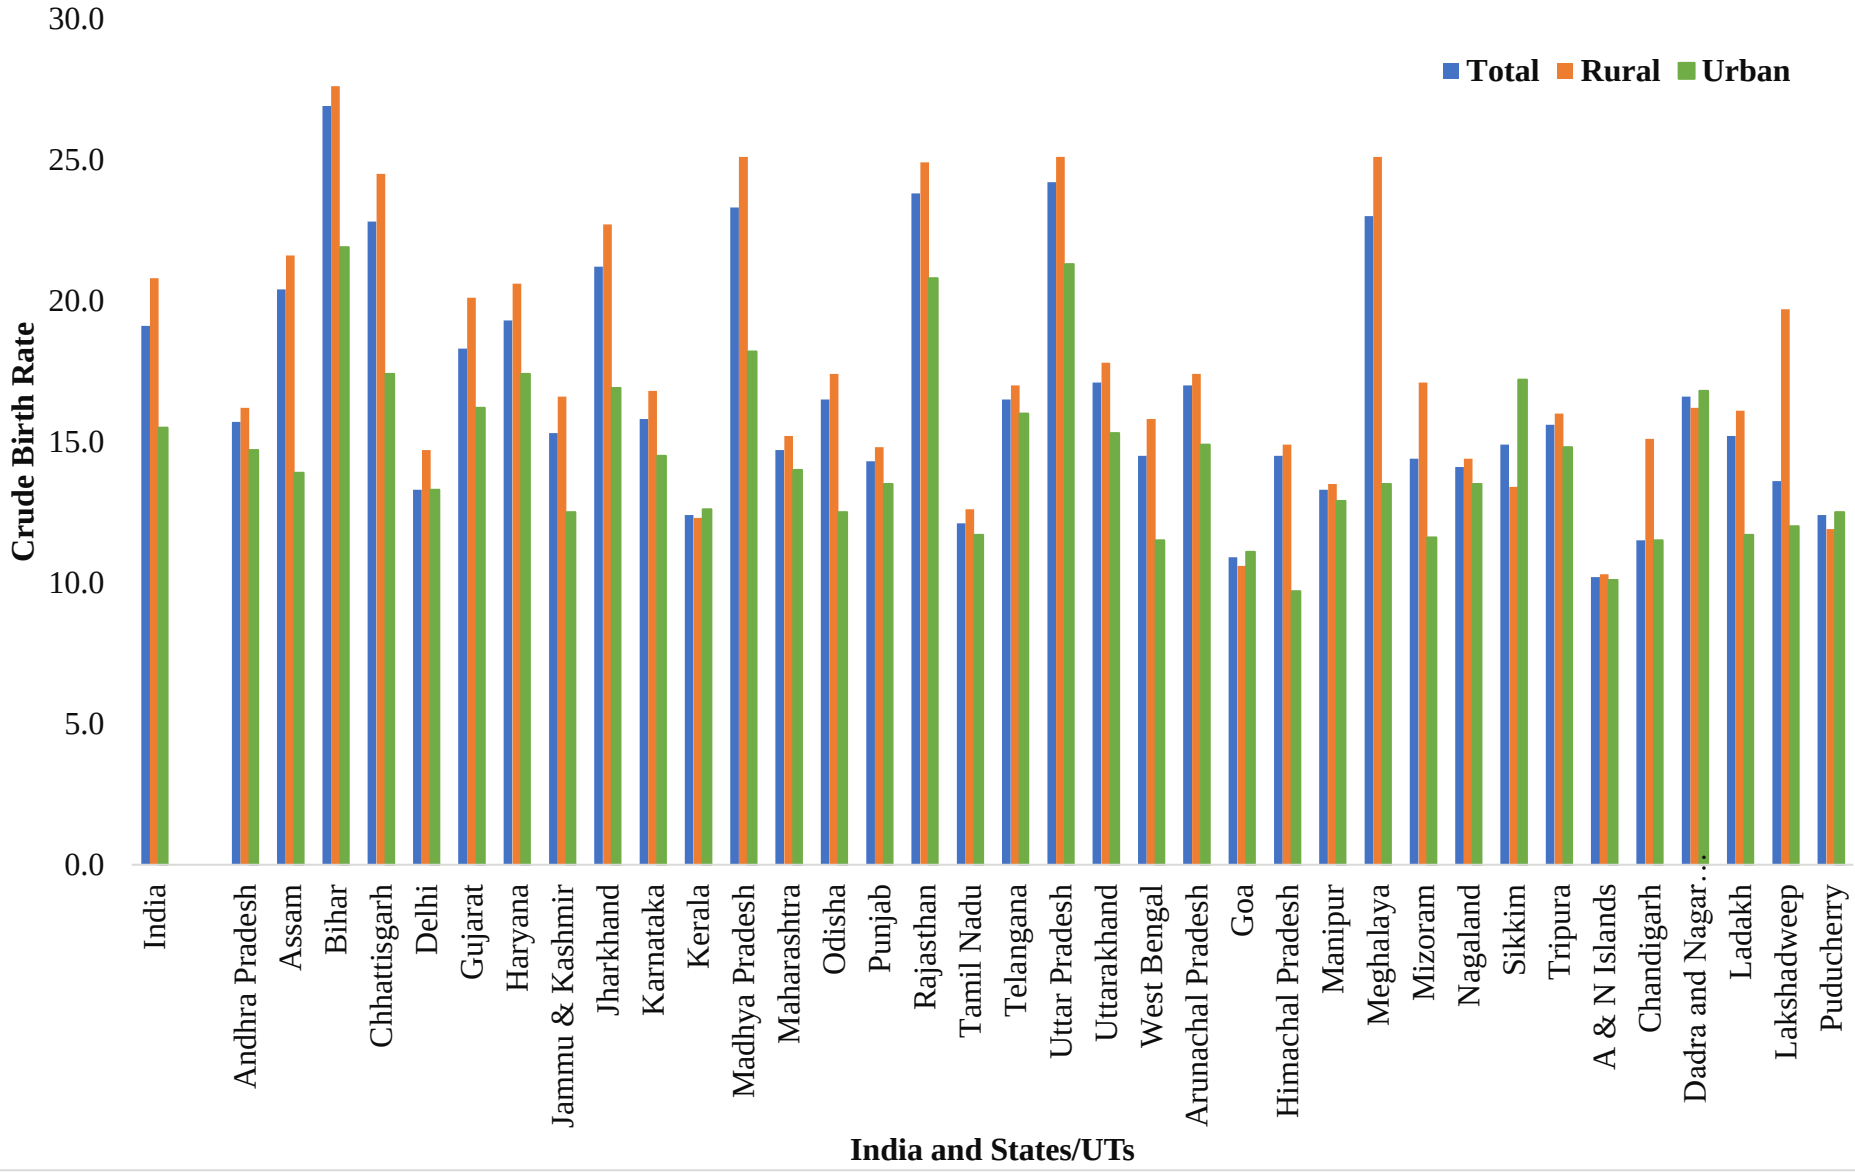

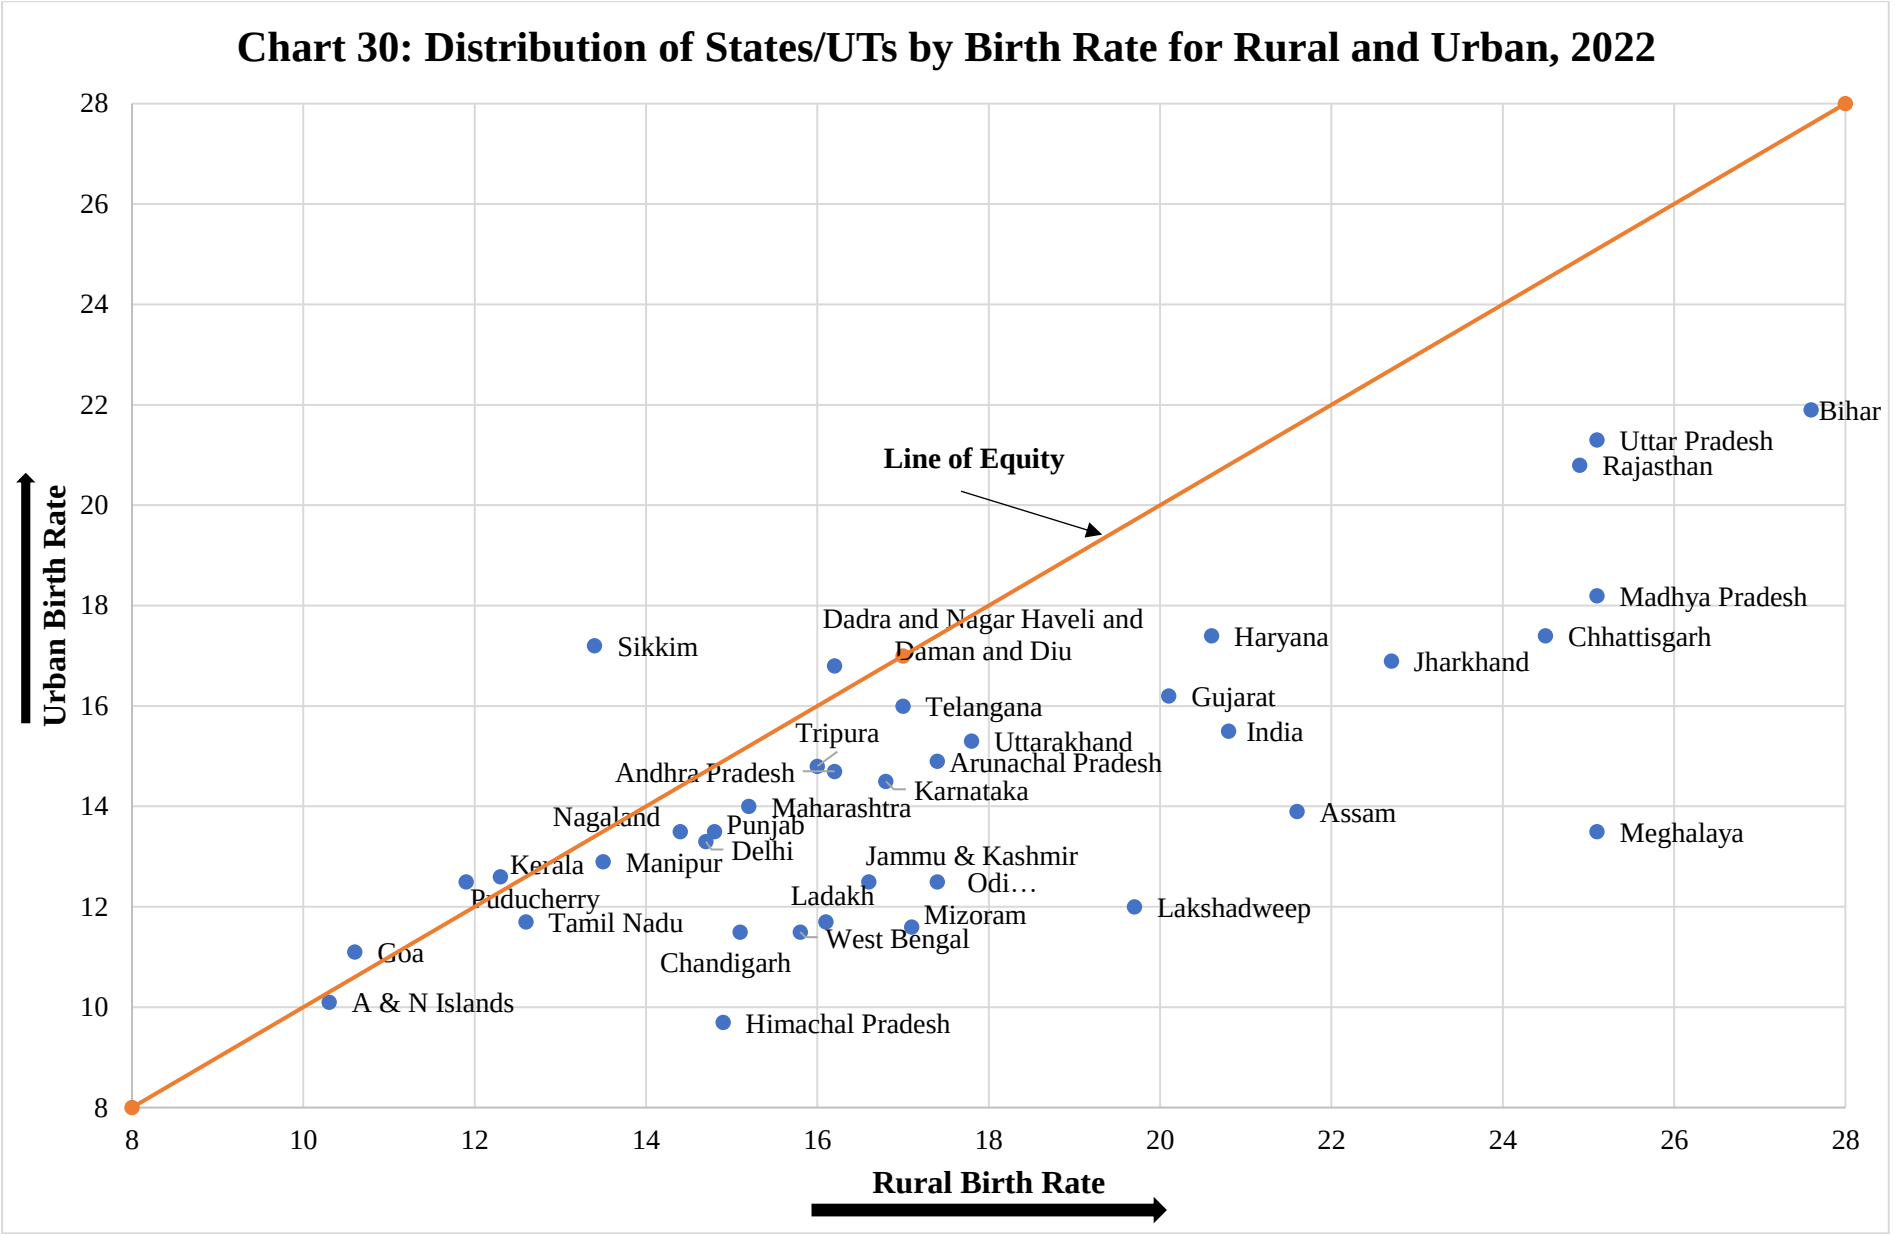

Chart 30: Distribution of States/UTs by Birth Rate for Rural and Urban, 2022

3.7 Statement 15 below provides the percentage change in average Crude Birth Rate between the periods 2010-12 and 2020-22 for India and the bigger States/UTs separately for rural and urban areas. Between 2010-12 and 2020-22, there was an overall 11.5% decrease in the average CBR for India. Among the States/UTs, the percentage change in the average CBR ranged from -21.1% for Delhi to -6.5% for Bihar. In terms of residence, the 3-year average Crude Birth Rate has declined in both rural and urban areas of all bigger States/UTs. Further, the rural CBR was higher than the urban CBR in all bigger States/UTs except Kerala for 2020-22. The percentage change in rural CBR ranged from -21.8% for Delhi to -6.3% for Bihar whereas the percentage change in urban CBR ranged from -26.2% for Delhi to -1.7% for West Bengal. Chart 31, 32 and 33 depict the average birth rate between 2010-12 and 2020-22 of India and bigger States/UTs for Total, Rural and Urban areas respectively along with respective rate of change. Chart 34 shows the year-wise birth rate from 1985 to 2022 by Residence for India.

Statement 15

Percentage change in average Crude Birth Rate between 2010-12 and 2020-22 by Residence, India and bigger States/UTs

India and bigger States/UTs	Total			Rural			Urban

Sex Ratio at Birth:

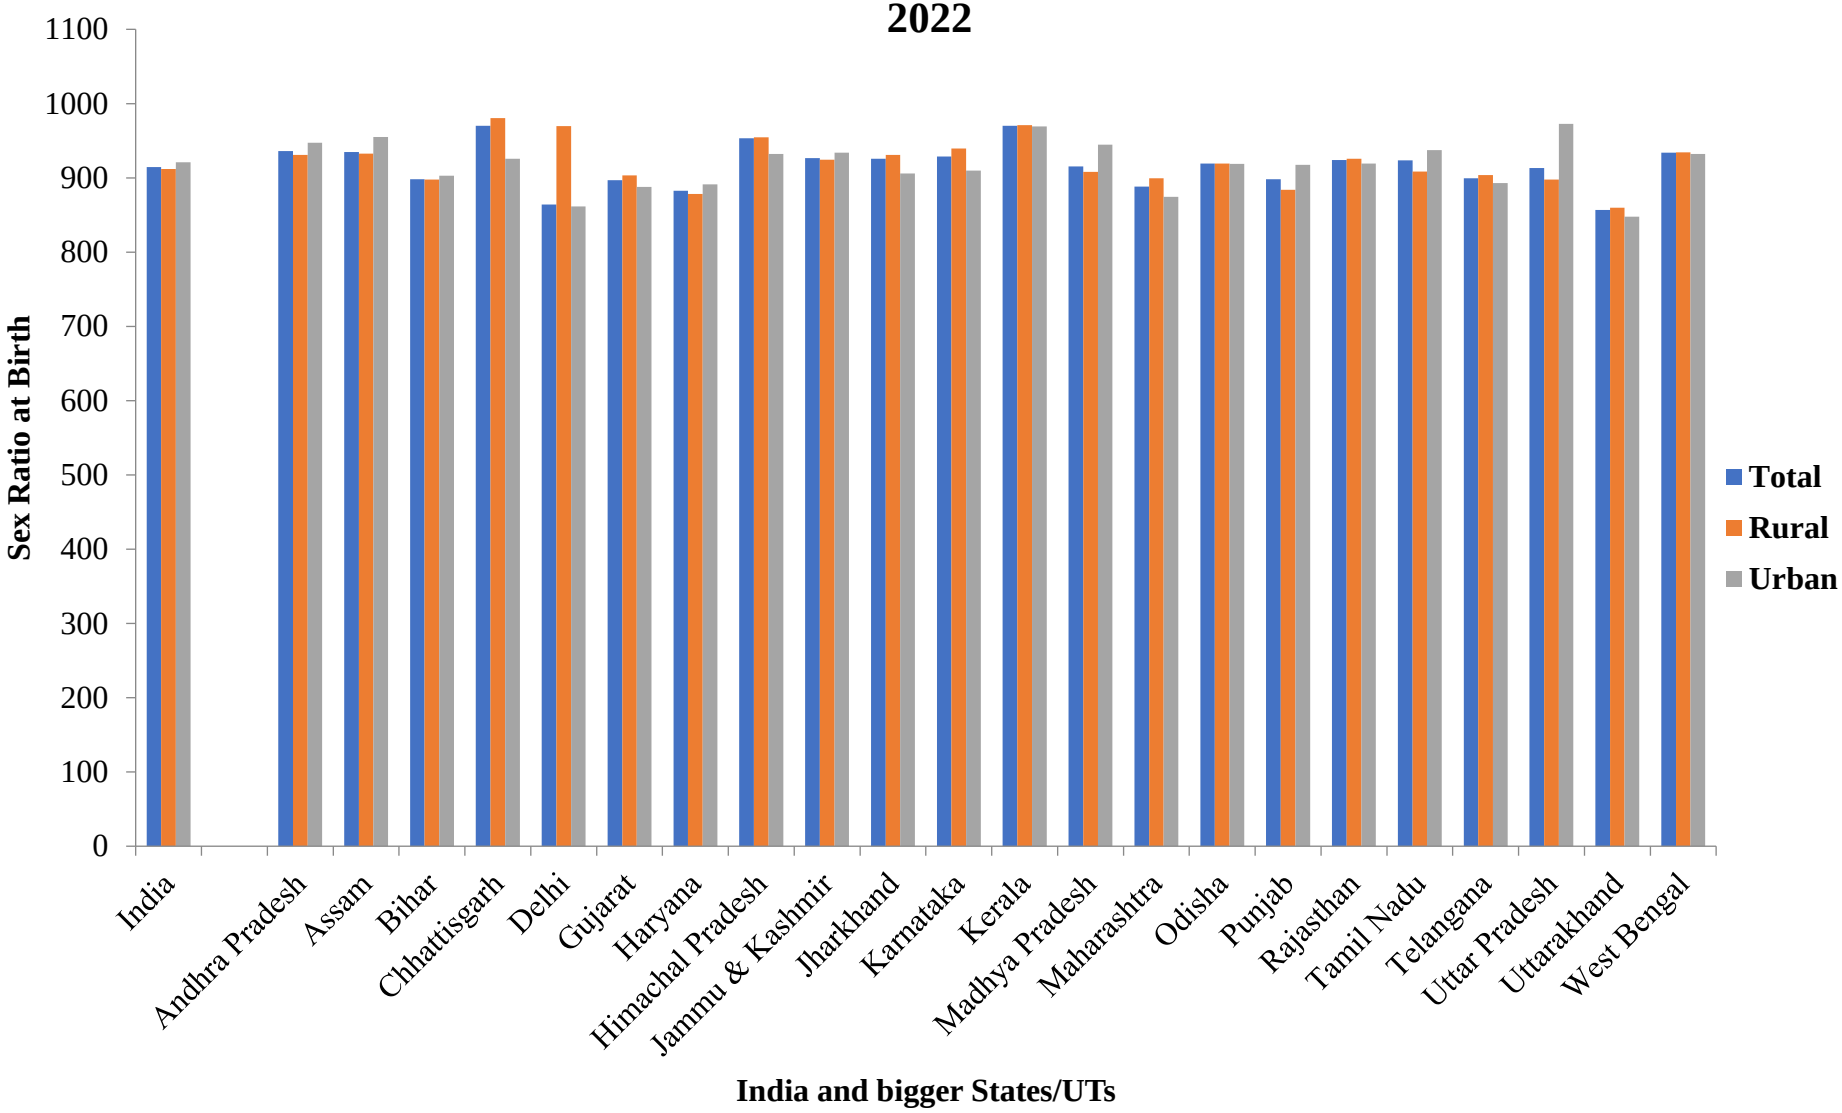

3.8 Statement 16 below presents Sex Ratio (number of females per 1000 males) at birth during the period 2020-22 in India and bigger States/Union Territories in 2020-22, categorized by residence. Overall, India had a Sex Ratio of 914 females per 1000 males at birth during the period 2020-22 (3-years average). Kerala and Chhattisgarh had the highest sex ratio at birth with 970 females per 1000 males, while Uttarakhand has the lowest sex ratio at birth with 857 females per 1000 males. When categorized by residence, the urban areas had a higher sex ratio than the rural areas in 9 bigger States/UTs. In Delhi, the sex ratio was significantly lower in urban areas compared to rural areas. Chart 35 depicts the variation in Sex Ratio at birth by residence among bigger States/UTs in the Country.

Statement 16

Sex Ratio (female per 1000 male) at birth by Residence, India and bigger States/UTs, 2020-2022

India and bigger States/UTs	Total	Rural	Urban

Chart 35: Sex Ratio at Birth by residence, India and bigger States/UTs, 2020-2022

General Fertility Rate:

3.9 Estimates of General Fertility Rate (GFR), a refined measure of fertility, being defined as the number of live births per thousand women in the reproductive age group 15-49 years, is a useful tool for measuring fertility. The GFR for all-India and bigger States/UTs for the year 2022 are given below in Statement 17, separately for rural and urban areas. The overall GFR for India was 66.0 in 2022, with higher rates in rural areas (73.1) compared to urban areas (52.4). Among the bigger States/UTs, Bihar had the highest GFR (97.9), followed by Rajasthan (85.1) and Uttar Pradesh (84.6). These States/UTs also had higher GFR in rural areas compared to urban areas. Tamil Nadu had the lowest GFR among the bigger States/UTs (42.6), and there is no major difference between rural and urban areas. Chart 36 gives the distribution GFR for bigger States/UTs in rural and urban areas.

Statement 17

GFR (General Fertility Rate) by Residence, India and bigger States/UTs, 2022

India and bigger States/UTs	Total	Rural	Urban
India	**66.0**	**73.1**	**52.4**
Andhra Pradesh	52.1	54.4	48.0
Assam	68.9	73.1	45.5
Bihar	97.9	100.7	79.5
Chhattisgarh	77.7	84.9	56.3
Delhi	44.4	50.0	44.2
Gujarat	64.2	72.2	55.4
Haryana	67.4	72.3	59.8
Himachal Pradesh	50.1	51.8	32.9
Jammu & Kashmir	49.7	54.0	40.3
Jharkhand	73.2	78.8	57.5
Karnataka	53.1	57.0	47.8

Madhya Pradesh	83.8	91.8	62.9
Maharashtra	50.8	55.3	46.2
Odisha	56.5	60.5	40.5
Punjab	49.4	52.1	46.1
Rajasthan	85.1	90.0	71.8
Tamil Nadu	42.6	43.4	41.8
Telangana	54.1	55.9	51.6
Uttar Pradesh	84.6	89.3	71.1
Uttarakhand	60.6	63.5	53.2
West Bengal	47.0	51.3	37.5

Chart 36: General Fertility Rate (GFR) by residence, India & bigger States/UTs, 2022

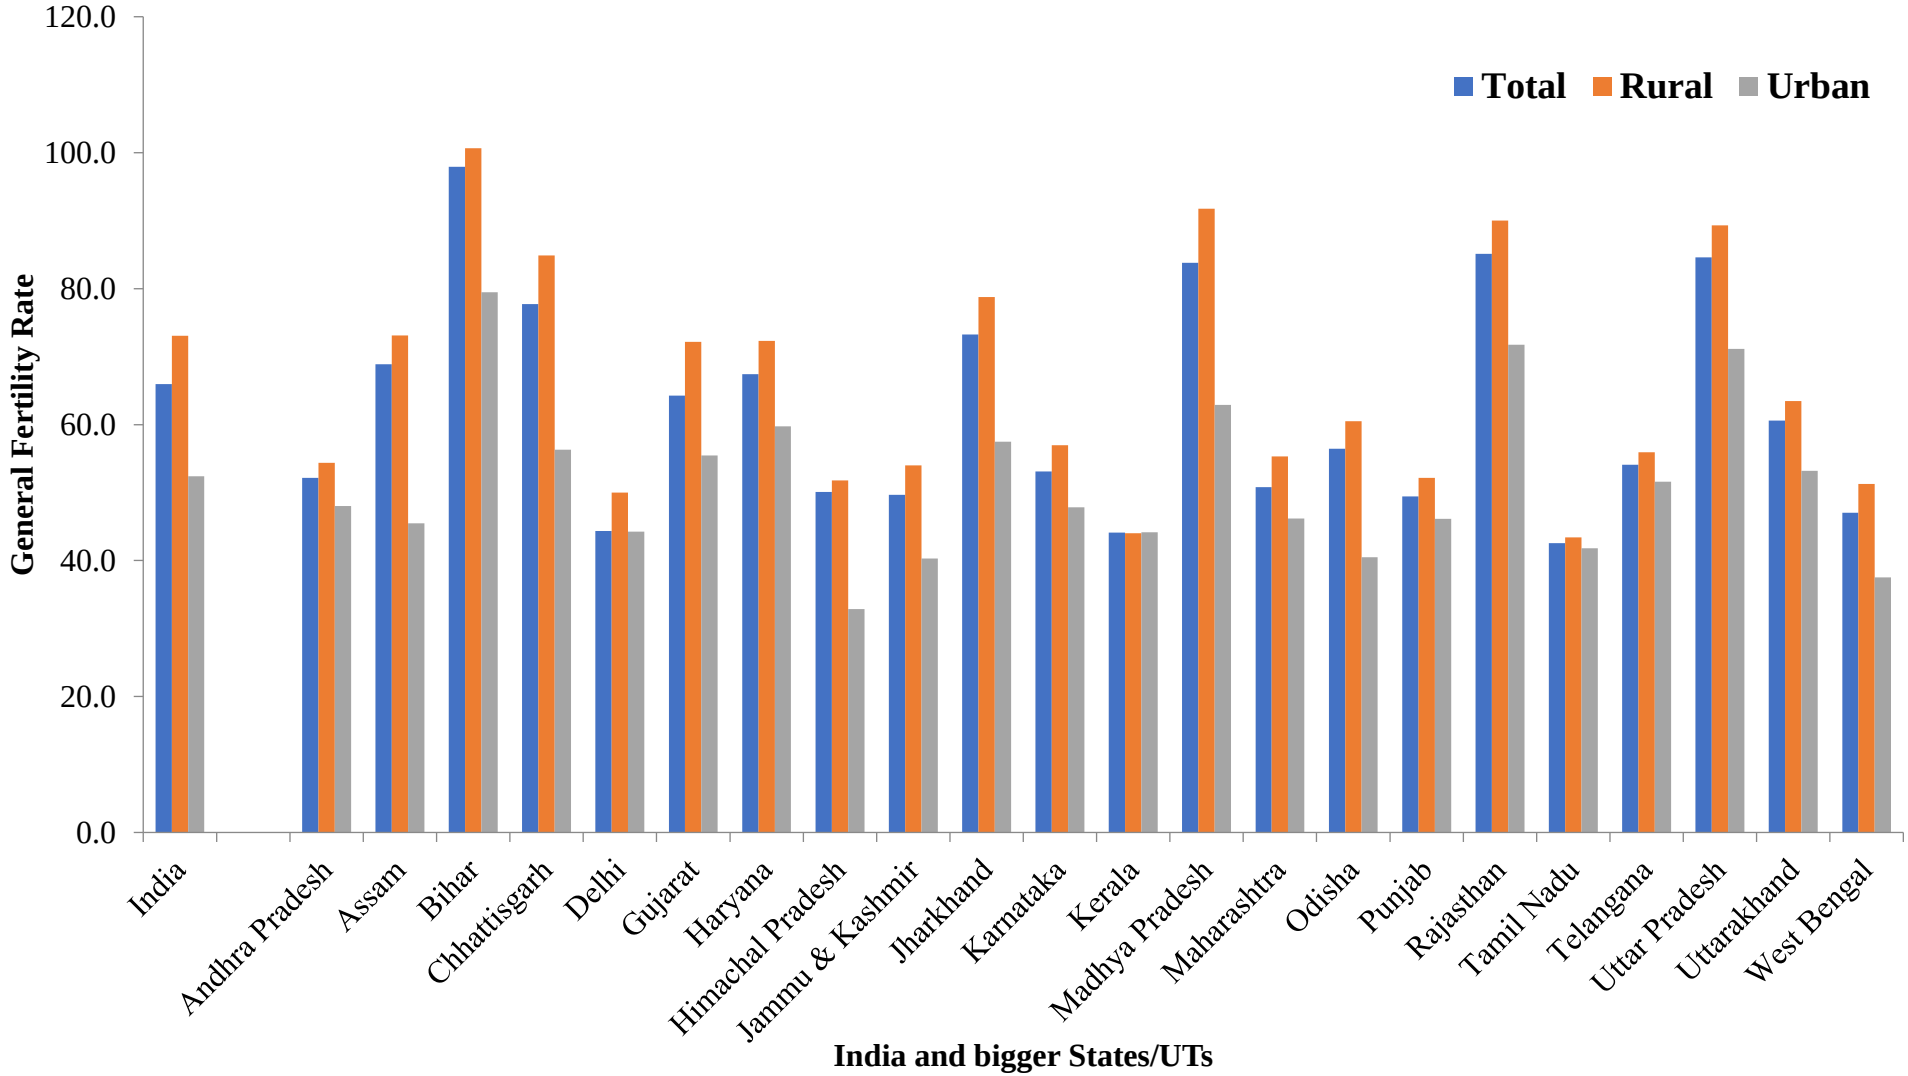

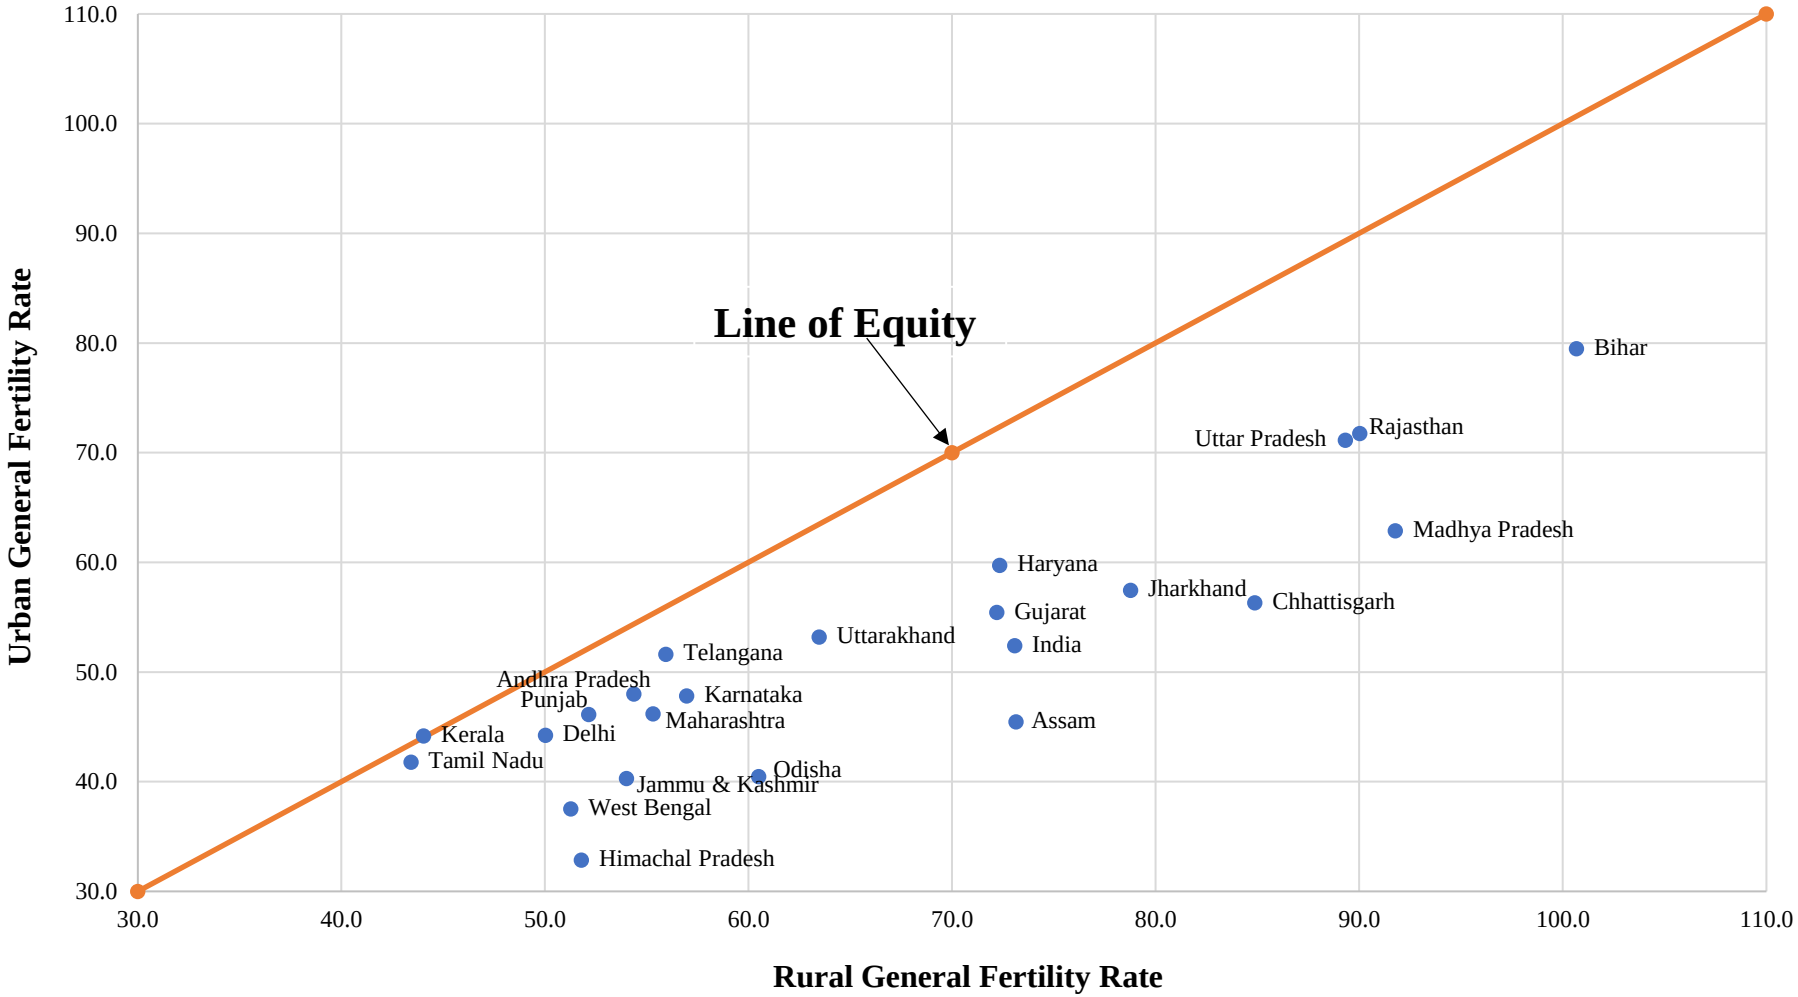

Chart 37: Distribution of bigger States/UTs by General Fertility Rate(GFR) for Rural and Urban areas, 2022

3.10 Changes in the average level of General Fertility Rate (GFR) between 2010-12 and 2020-22 for India and bigger States/UTs in terms of residence is given in Statement 18. Overall, the data shows that the GFR has decreased in India and in most of the bigger States/UTs between 2010-12 and 2020-22. The total GFR in India has decreased from 81.8 in 2010-12 to 66.7 in 2020-22, which represents a 18.5% decrease. The rural GFR has decreased by 17.8%, from 89.5 to 73.6, while the urban GFR has decreased by 14.7%, from 62.5 to 53.3.

3.11 Among the bigger States/UTs, Bihar had the highest GFR in both 2010-12 and 2020-22 of 110.6 and 95.3 respectively. Delhi has experienced the largest percent decrease among all States/UTs, with the GFR falling by 27.7% from 63.8 to 46.1. Kerala had the lowest GFR among all States/UTs in both 2010-12 and 2020-22, and it has also experienced 3rd smallest percent decrease of 15.7% after Himachal Pradesh (11.5%) and Bihar (13.8%) . Bihar has the smallest percent decrease of 1.1% during last 10 years followed by West Bengal (7.7%) and Assam (10.8%) in Urban GFR. The highest decrease in Urban GFR during last decade is observed in Delhi (33.0%) followed by Odisha (18.5%) and Karnataka (17.1%). The smallest percent decrease in the Rural GFR is observed in Himachal Pradesh (11.7%) followed by Haryana (14.9%) and Bihar (15.3%), while highest percent decrease in the Rural GFR is observed in Delhi (28.2%) followed by Jammu & Kashmir (21.8%). Chart 38, 39 and 40 depict the average GFR between 2010-12 and 2020-22 and percent change for India and bigger States/UTs for Total, Rural and Urban areas respectively. Chart 41 shows the year-wise General Fertility Rate from 1985 to 2022 by Residence for India.

Statement 18

Percent change in average GFR (General Fertility Rate) between 2010-12 and 2020-22 by residence, India and bigger States/UTs

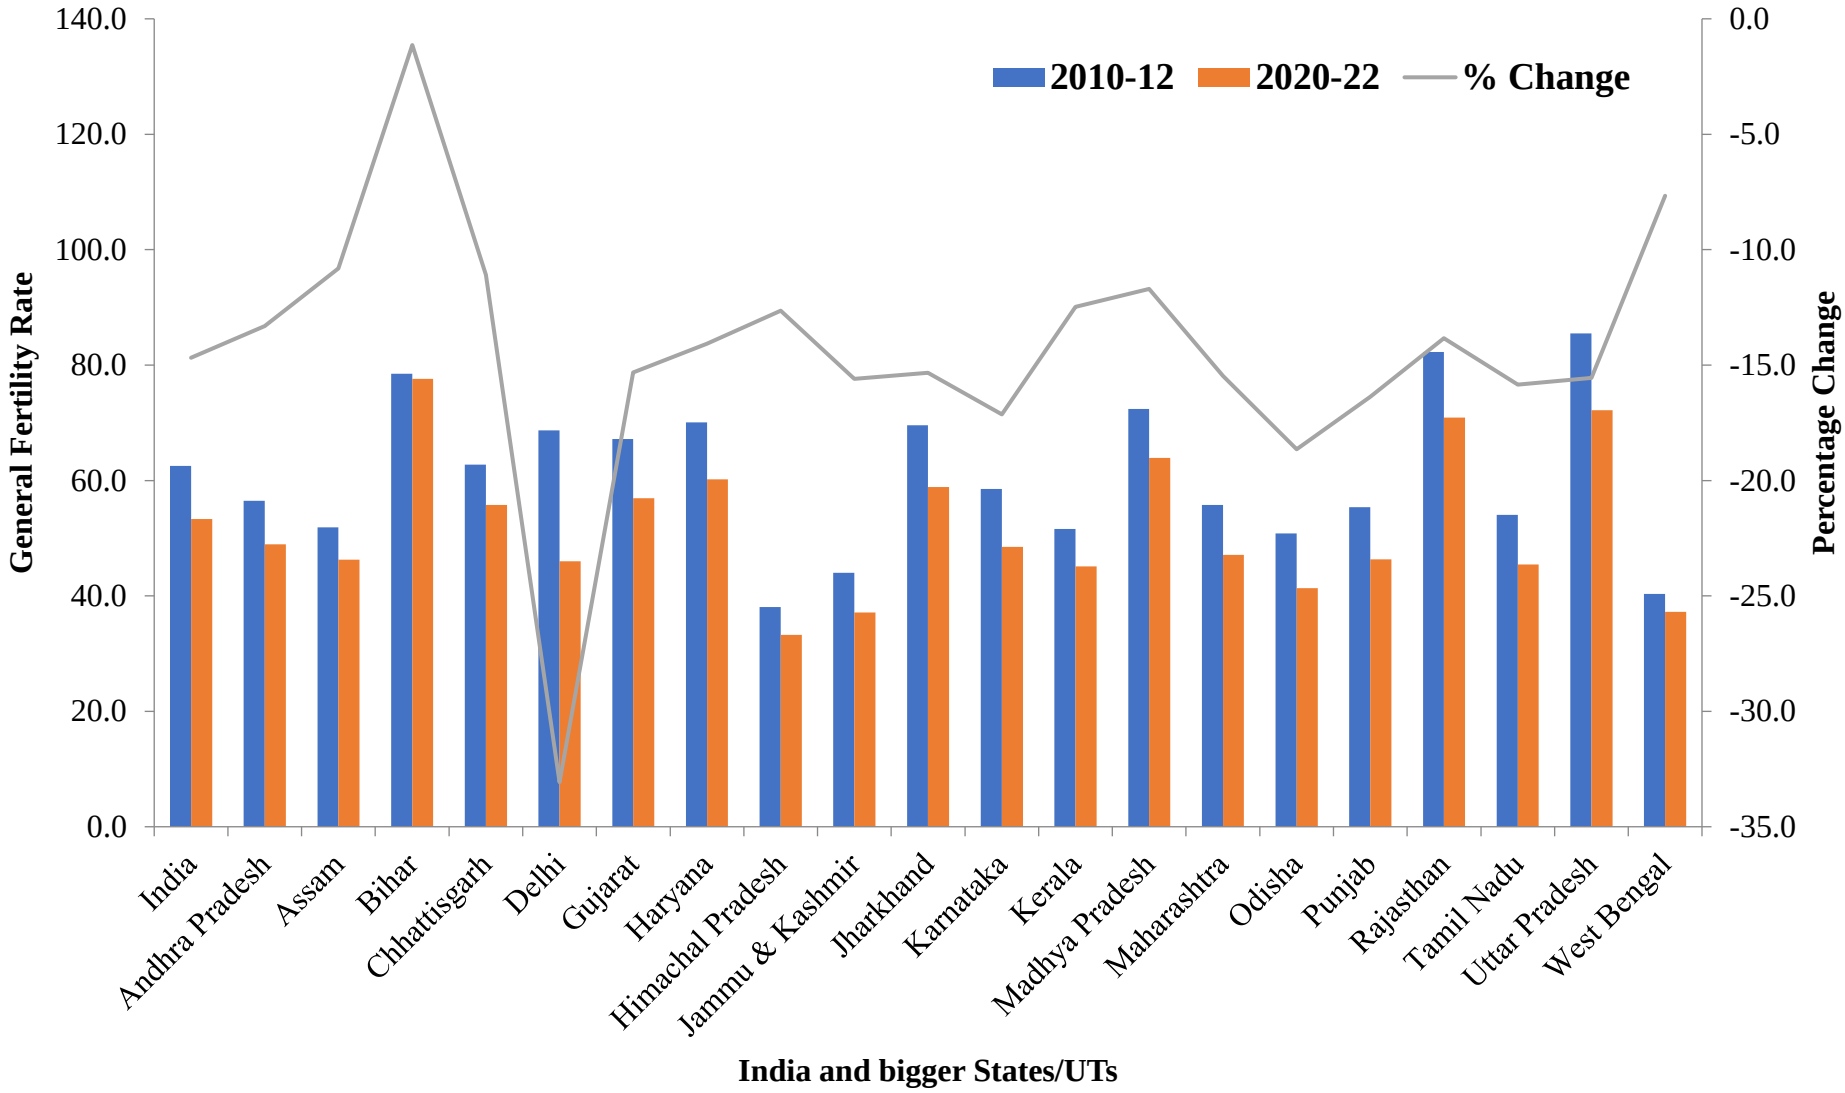

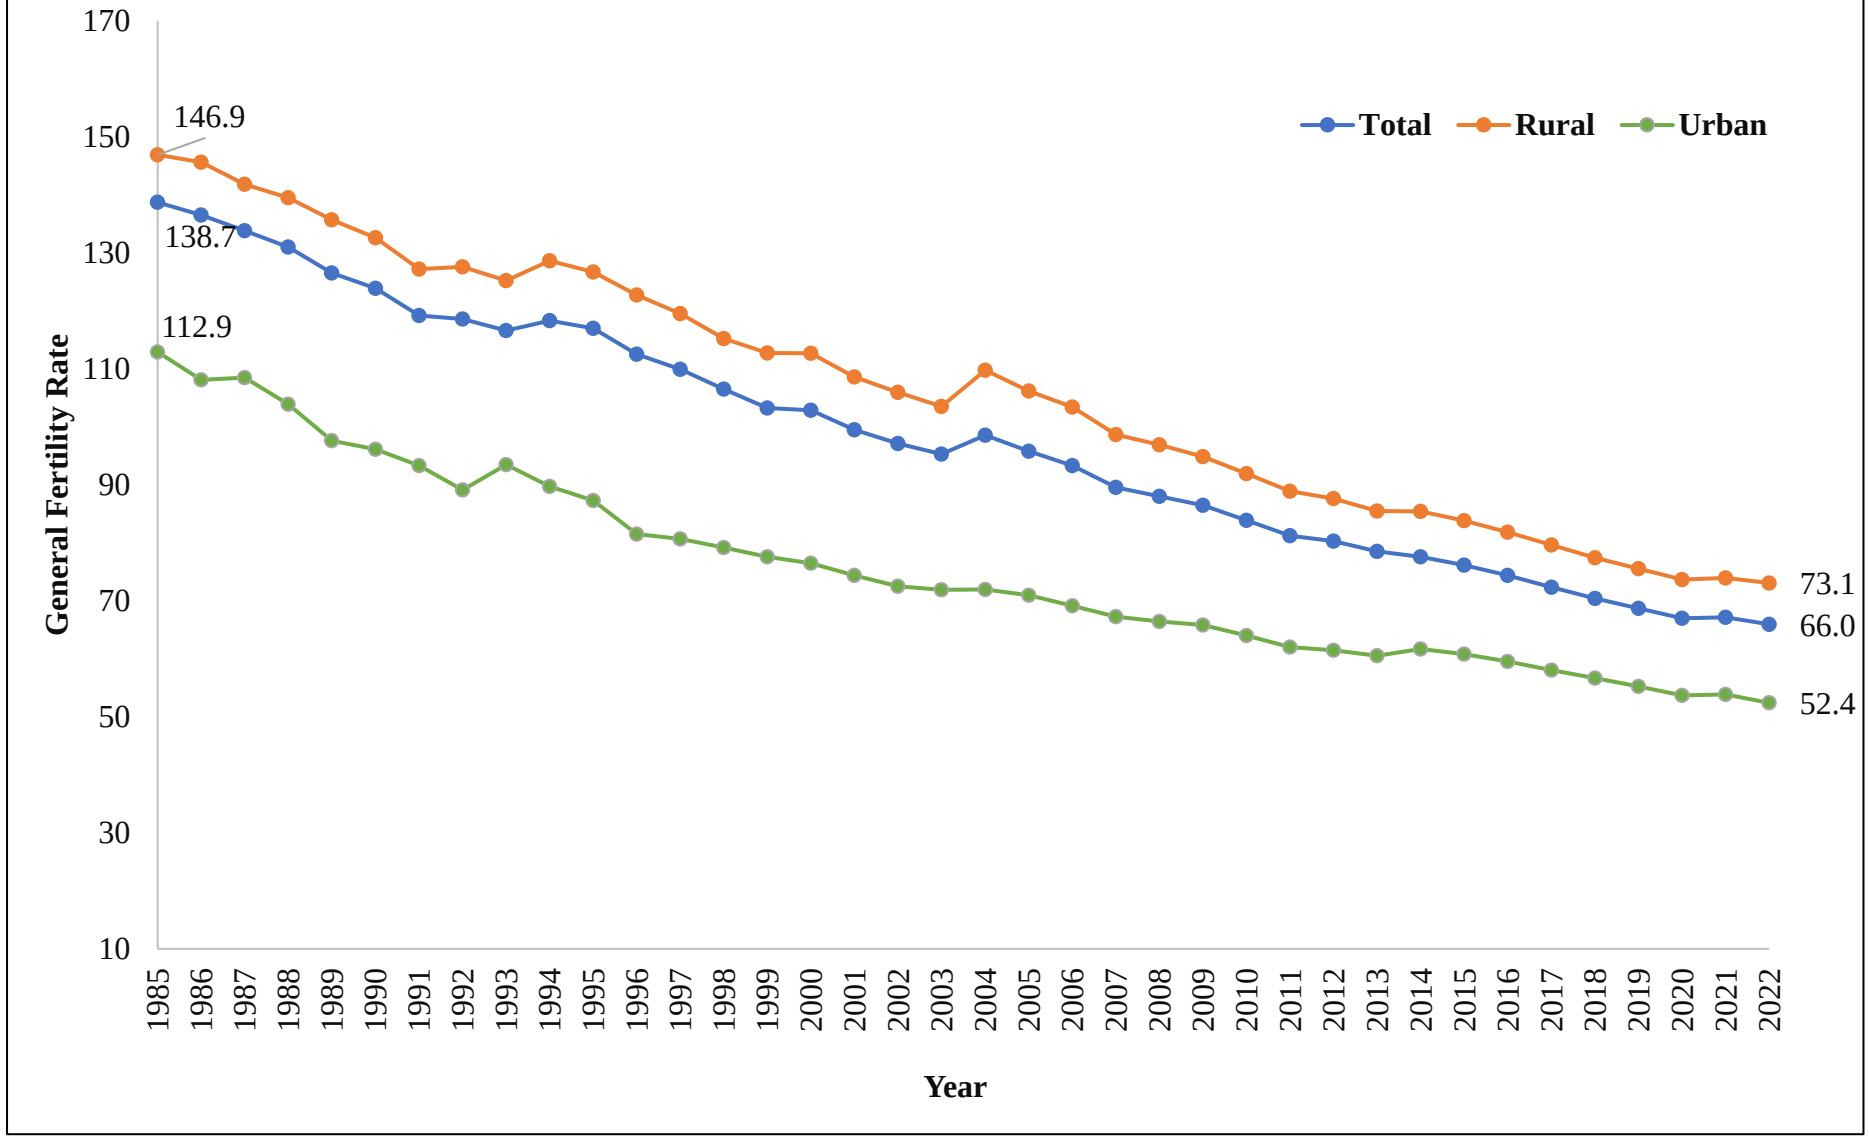

Chart 41: Trends in General Fertility Rate, 1985 - 2022 by Residence, India

Fertility by age of Women:

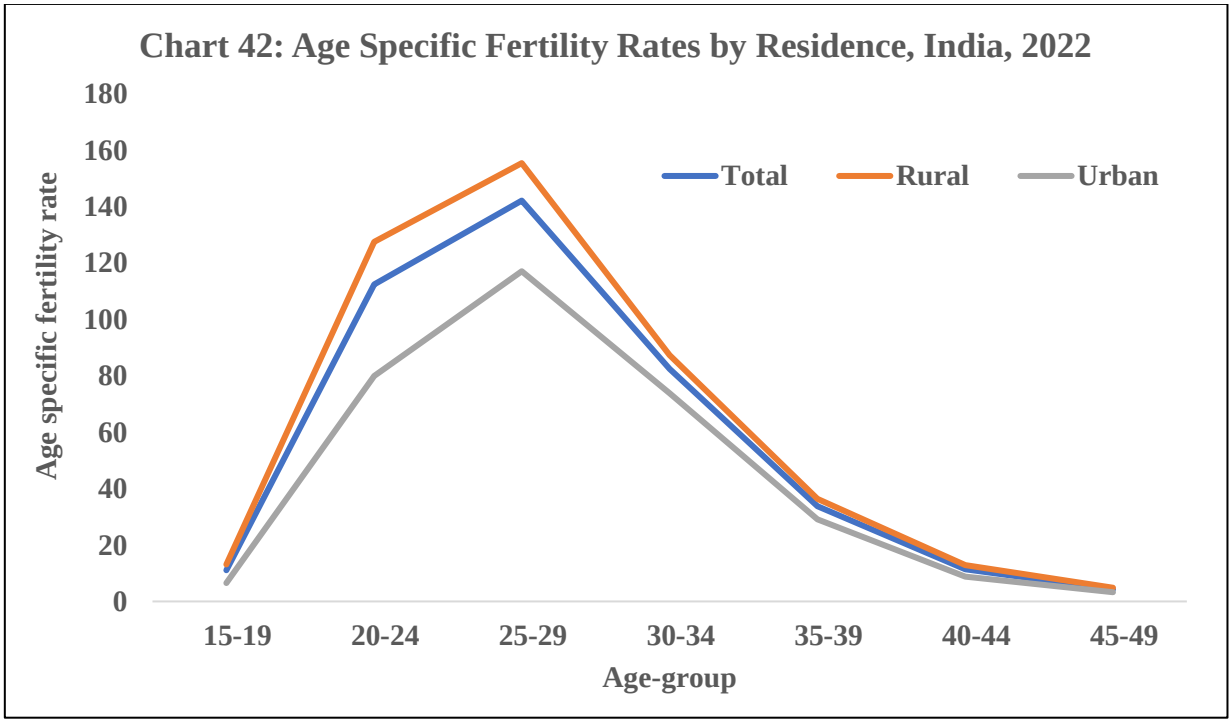

3.12 Age of women is an important factor affecting the fertility levels. On the basis of data on births to women by specific age groups in the reproductive span 15-49 years as available from SRS, Age-Specific Fertility Rates have been calculated. Statement 19 below presents the Age-Specific Fertility Rates for India by residence for the year 2022.

3.13 The data reveals that fertility in all the age groups was higher in rural areas than in urban areas in 2022 with the difference being more prominent in the younger age groups. The highest ASFR was observed in the age group 25-29, with a total rate of 142.1, rural rate of 155.4, and urban rate of 117.1. The ASFRs gradually decrease for higher age groups, with the lowest rate of 4.3 observed in the age group 45-49. This distribution of Age-Specific Fertility Rates by residence is presented in Chart 42. ASFR curve for urban areas falls under the ASFR curve of rural areas. Both Rural and Urban ASFR curves have declined very steeply after attaining a peak for age 25-29.

Statement 19

ASFRs (Age Specific Fertility Rates) by Residence, India, 2022

Age Groups	Total	Rural	Urban
15-19	11.1	13.1	6.5
20-24	112.4	127.5	79.9
25-29	142.1	155.4	117.1
30-34	82.4	87.4	73.8
35-39	33.7	36.4	29.1
40-44	11.4	12.9	8.8
45-49	4.3	4.9	3.3

3.14 The percentage change in Age-Specific Fertility Rate during the last decade is presented below in Statement 20 separately for rural and urban areas. The data pertains to changes in the Age-Specific Fertility Rates for the quinquennial age groups based on average value for three years period viz. 2010-12 and 2020-22 for all-India.

3.15 At the National level, there is a shift in the trend of fertility with an increase in fertility in the later ages 30-44, while a decrease in fertility in the lower age-groups 15-29. Charts 43, 44 and 45 depict the average Age-Specific Fertility Rates of India between 2010-12 and 2020-22 for Total, Rural and Urban areas respectively. Chart 46 shows the percentage change in average Age-Specific Fertility Rates between 2010-12 and 2020-22 by residence.

Statement 20

Percent change in Age-Specific Fertility Rates by Residence between 2010-12 and 2020-22, India

Age group	Total			Rural			Urban		
	2010-12	2020-22	% Change	2010-12	2020-22	% Change	2010-12	2020-22	% Change

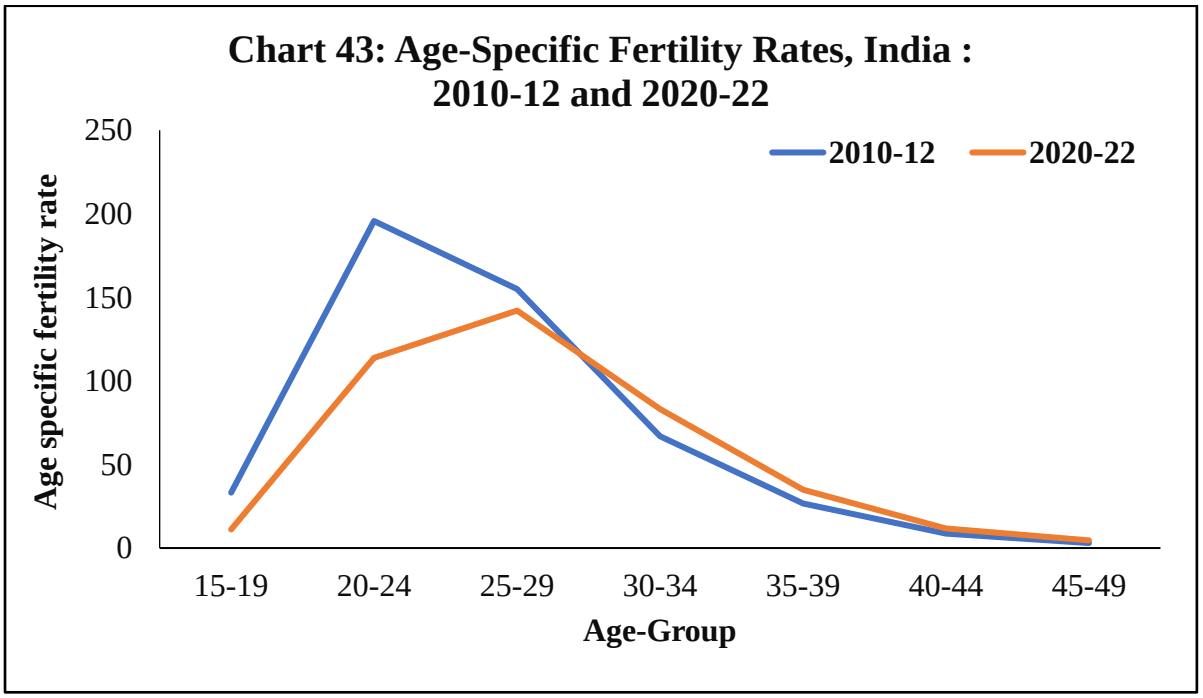

Chart 44: Age-Specific Fertility Rates, India-Rural : 2010-12 and 2020-22

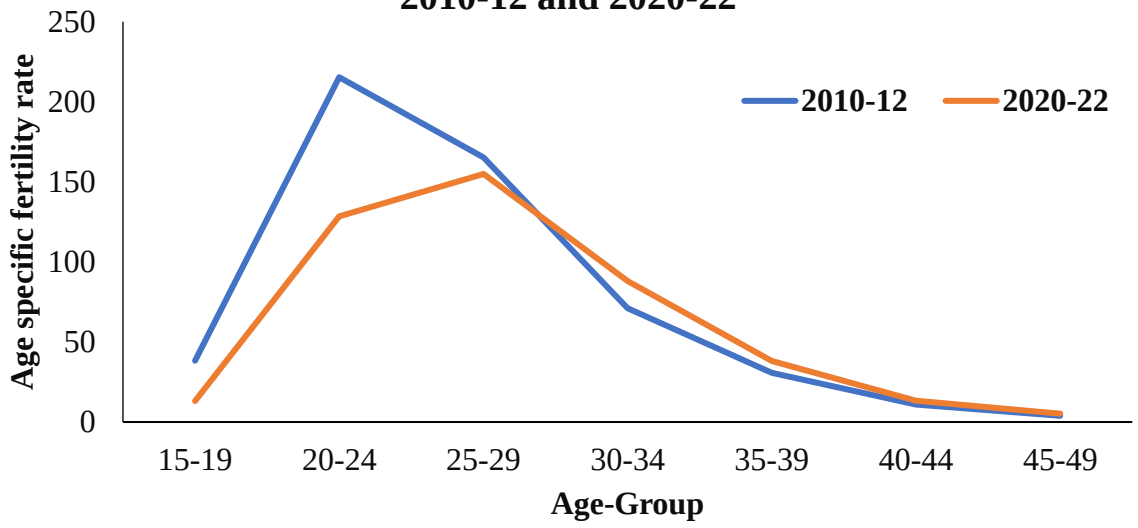

Chart 45: Age-Specific Fertility Rates, India-Urban : 2010-12 and 2020-22

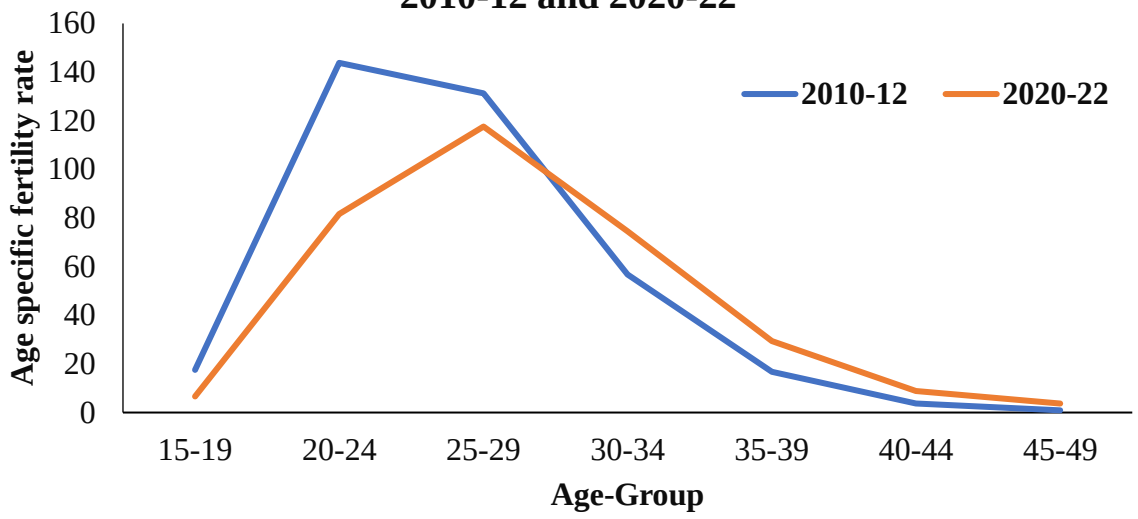

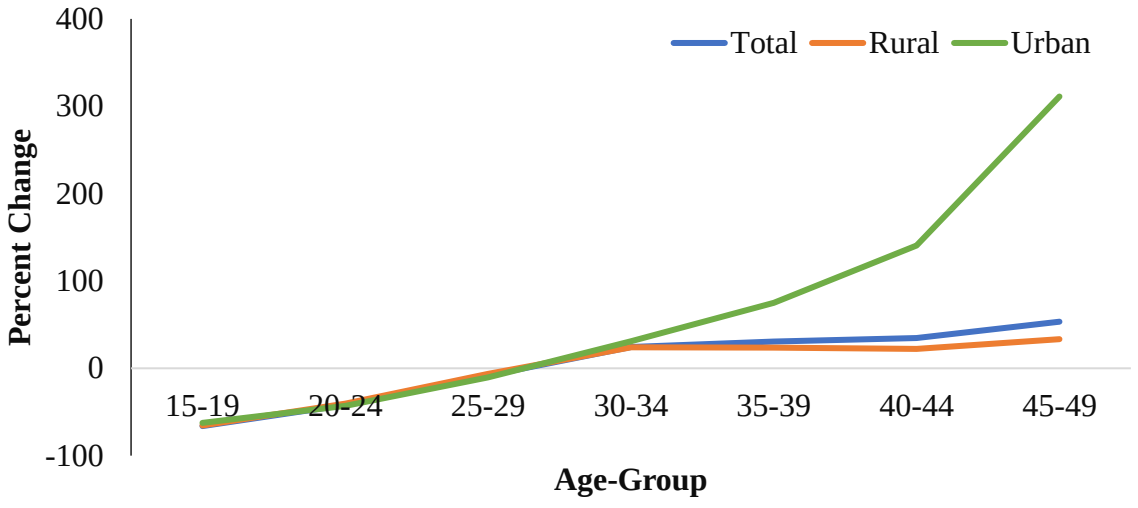

Chart 46: Percent change in Age-Specific Fertility Rate by Residence between 2010-12 and 2020-22, India

Age-Specific Fertility Rate across bigger States/UTs:

3.16 The fertility pattern by age groups in different States/UTs in India for 2022 is presented below in Statement 21. The data shows that the highest fertility rate was for the age group of 25-29 years with a value of 142.1 for India in 2022. This is followed by the age group of 20-24 years having ASFR of 112.4. The data also indicates significant variations in fertility rates across States/UTs. Bihar has the highest ASFR for the age group of 25-29 years with a rate of 213.1, whereas the State of West Bengal had the lowest ASFR of 83.3 for the same age group. The Age-Specific Fertility Rate peaks at the age group 25-29 years for India and all States/UTs, except for UT of Jammu & Kashmir, where it peaks at the age-group of 30-34 years. Age-Specific Fertility Rate of age group 15-19 years, which is also known as Adolescent Birth Rate (ABR) is an important indicator and is 11.1 for the year 2022 for a whole Country. The State of West Bengal had the highest ASFR for 15-19 years or ABR of (23.5) followed by Assam (18.8) and Jharkhand (15.5), whereas NCT of Delhi had the lowest ABR of (2.6) followed by Jammu Kashmir (4.3) and Uttarakhand & Kerala at 4.8 each. The rural-urban levels in ASFR for bigger States/UTs are shown in Table 3.

Statement 21

ASFRs (Age Specific Fertility Rates), India and bigger States/UTs, 2022

India and bigger States/UTs	15-19	20-24	25-29	30-34	35-39	40-44	45-49

West Bengal	23.5	108.3	83.3	44.3	13.2	3.9	2.0

3.17 The percentage distribution of cumulative fertility by woman's age is shown below in Statement 22 for India and bigger States/UTs for the year 2022. Overall, the data indicates that the cumulative fertility rate increases with age among women in India and all the major States and UTs. However, there are some variations in the cumulative fertility rate among different States/UTs. West Bengal had the highest percentage of cumulative fertility rate for women aged 15-19, 15-24, 15-34, and 15-39. Andhra Pradesh had the highest percentage of cumulative fertility rate for women in the age group 15-29 while Delhi had the lowest percentage of cumulative fertility rate for women aged 15-19 and Jammu & Kashmir had lowest percentage of cumulative fertility rate for women for higher age-groups. Chart 47 gives percentage cumulative Age-Specific Fertility Rate for India by residence. Chart 47B gives contribution of various age-groups in Total Fertility by Residence for India for the year 2022.

Statement 22

Percentage distribution of cumulative fertility by age group, India and bigger States/UTs, 2022

15-19	2.8	3.1	1.8

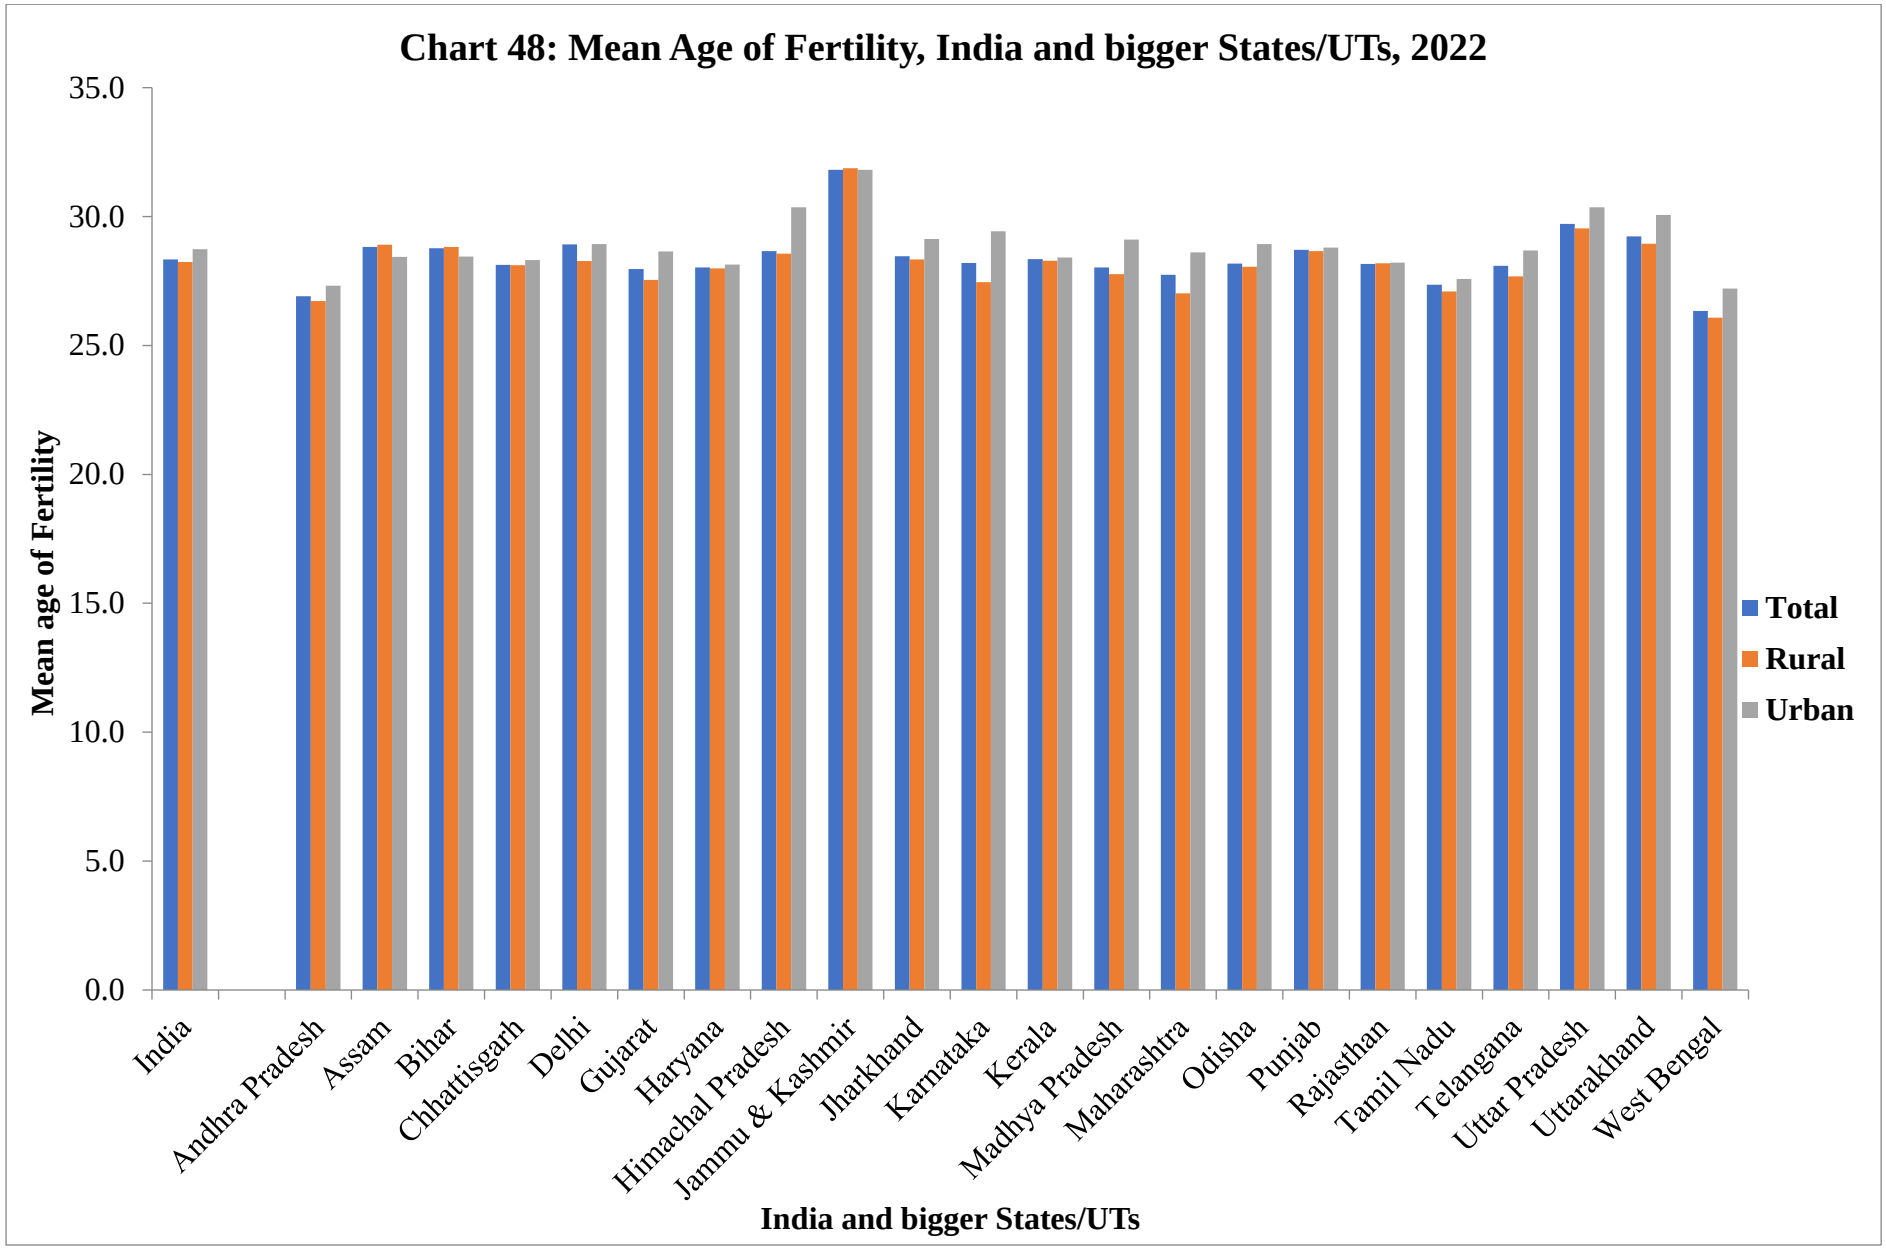

Mean Age of Fertility:

3.18 The difference in the pattern of child bearing can be measured in terms of the Mean Age of Fertility, which describes the age pattern of fertility of synthetic cohort of hypothetical group of women viewed as having, in their lifetime, similar fertility experience recorded in a calendar year. The Mean Age of Fertility has been calculated from the Age-Specific Fertility Rate. The Mean Age of Fertility is the average age at which women give birth to their first child. The associated standard deviations are also shown. The States/UTs having lower values of standard deviation recorded higher concentrations of fertility about the mean age as compared to those with higher values. Statement 23 below shows the Mean Age of Fertility for India and bigger States/UTs in 2022. The Mean Age of Fertility for India was 28.3 years, ranging from 26.3 years in West Bengal to 31.8 years in Jammu & Kashmir. The Mean Age of Fertility is slightly higher in urban areas (28.7 years) compared to rural areas (28.2 years). Chart 48 shows the Mean Age of Fertility of India and bigger States/UTs by residence.

Total Fertility Rate:

3.19 The cumulative value of the Age-Specific Fertility Rates at the end of the child bearing age gives a measure of fertility known as Total Fertility Rate (TFR). TFR indicates the average number of children expected to be born per woman during her entire span of reproductive period assuming that the Age-Specific Fertility Rates, to which she is exposed to, continue to be the same and that there is no mortality. The TFRs worked out on the basis of the ASFRs for the year 2022 are given below in Statement 24 for India and bigger States/UTs separately for rural and urban areas. The TFR for India as a whole in 2022 was 2.0, with a higher TFR in rural areas (2.2) than in urban areas (1.6). Bihar had the highest TFR among the bigger States/UTs with 3.0, followed by Uttar Pradesh (2.6) and Madhya Pradesh & Rajasthan at 2.5. Delhi & Tamil Nadu has lowest TFR of 1.3 each followed by West Bengal (1.4) and Himachal Pradesh, Kerala, Maharashtra and Punjab 1.5 each. The TFR in urban areas was generally lower than in rural areas across all major States/UTs in India, except for Kerala and Tamil Nadu. Chart 49 presents levels of TFR by residence for India and bigger States/UTs. Distribution of bigger States/UTs by values of TFR in rural and urban areas is shown in Chart 50.

Statement 24

TFR (Total Fertility Rate) by Residence, India and bigger States/UTs, 2022

India and bigger States/UTs	Total	Rural	Urban
India	**2.0**	**2.2**	**1.6**
Andhra Pradesh	1.6	1.6	1.4
Assam	2.1	2.2	1.4
Bihar	3.0	3.1	2.4
Chhattisgarh	2.3	2.5	1.7
Delhi	1.3	1.4	1.3

Uttarakhand	1.8	1.9	1.6
West Bengal	1.4	1.5	1.2

Note: Rounded off to one decimal point.

Chart 49: Total Fertility Rate (TFR) by residence, India and bigger States/UTs, 2022

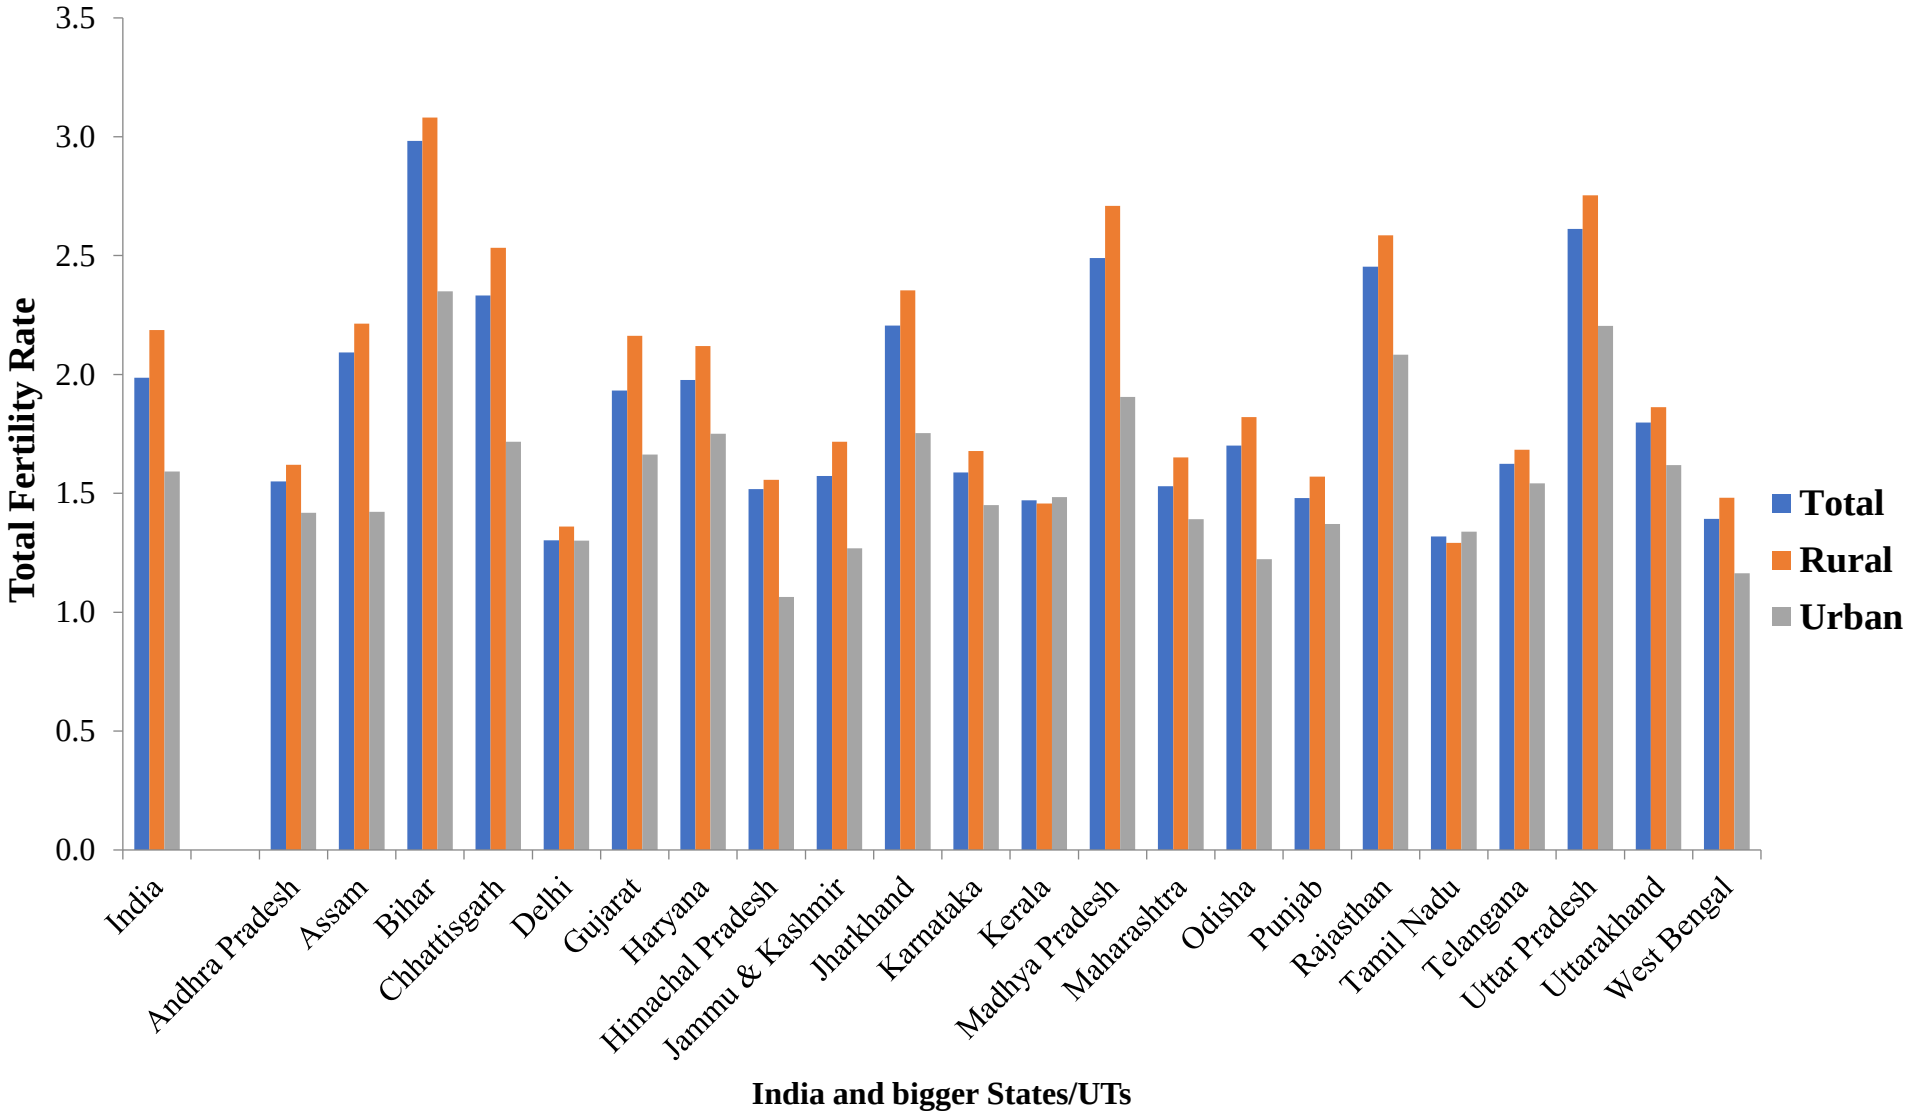

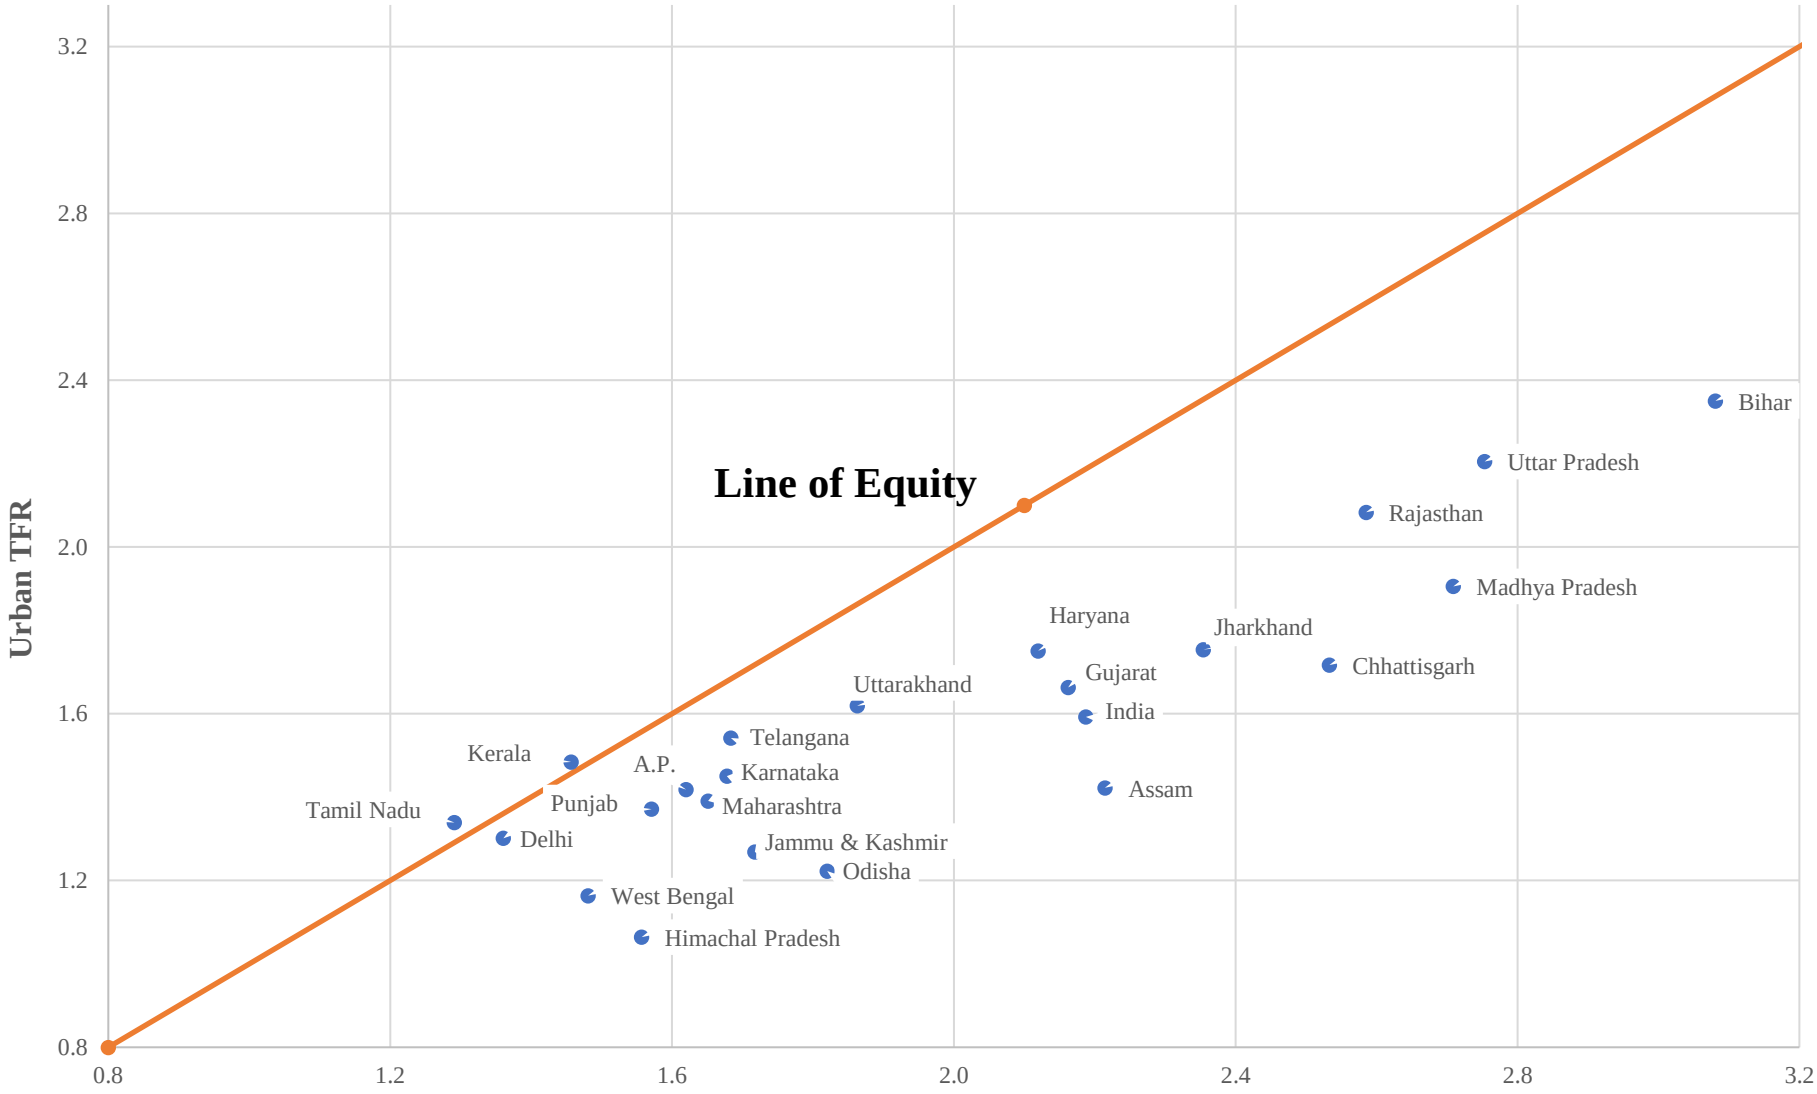

Chart 50: Distribution of bigger States/UTs by values of TFR for rural and urban areas, 2022

3.20 Statement 25 below presents the percentage change in the average level of TFR between the periods 2010-12 and 2020-22 in India and bigger States/UTs by residence. Overall average TFR in India has decreased from 2.4 in 2010-12 to 2.0 in 2020-22, which is a decrease of 16.7%. The rural TFR decreased by 18.5% (from 2.7 to 2.2), while the urban TFR decreased by 15.8% (from 1.9 to 1.6). Among the bigger States/UTs, Delhi had the highest percentage decrease in average TFR between 2010-12 and 2020-22 (22.2%), followed by Jammu & Kashmir (21.1%) and Jharkhand (20.7%) and lowest percentage decrease is observed in Punjab and Bihar at 11.8% each followed by Assam (12.5%) and Haryana (13.0%). Charts 51, 52 and 53 depict the average TFR and corresponding percent change between 2010-12 and 2020-22 for India and bigger States/UTs in terms of Total, Rural and Urban areas respectively. Chart 54 shows the trend in year-wise TFR from 1985 to 2022 by residence for India.

Statement 25

Percent change in average TFR (Total Fertility Rate) between 2010-12 and 2020-22 by Residence, India and bigger States/UTs

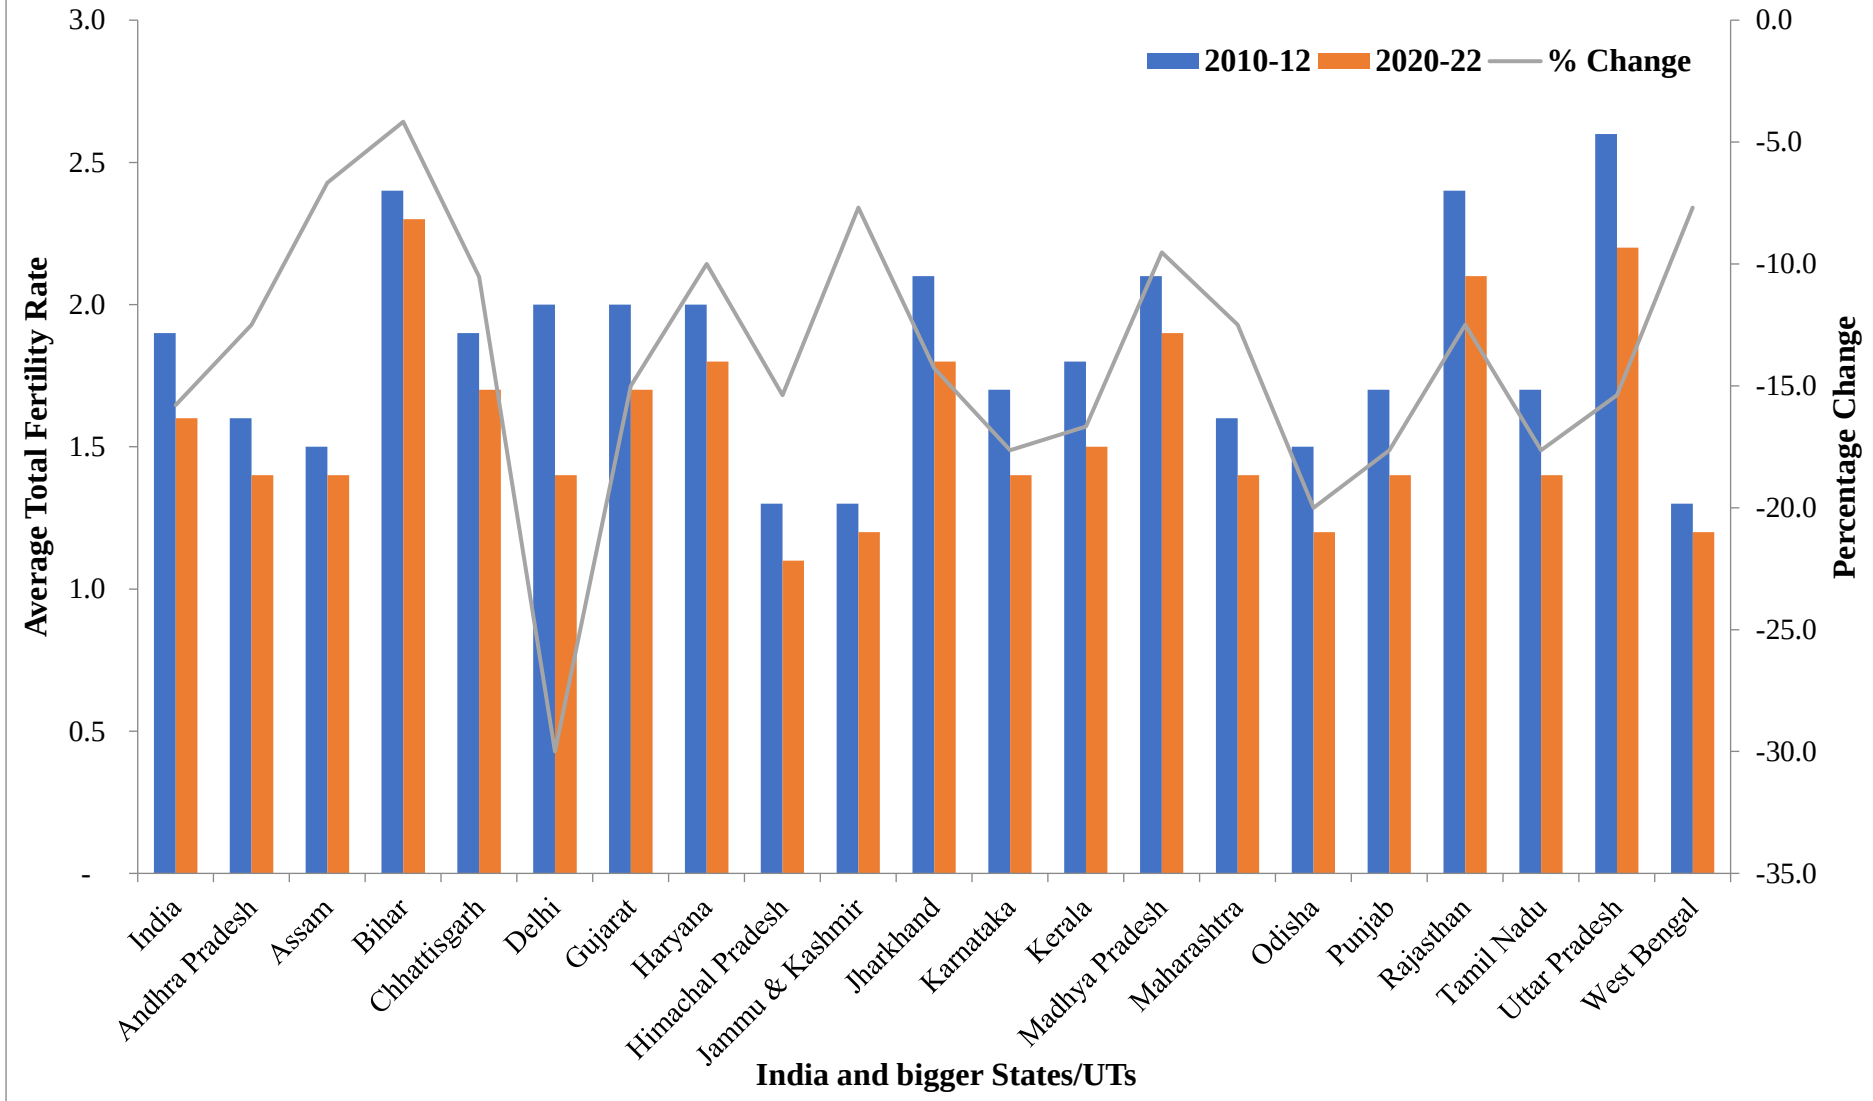

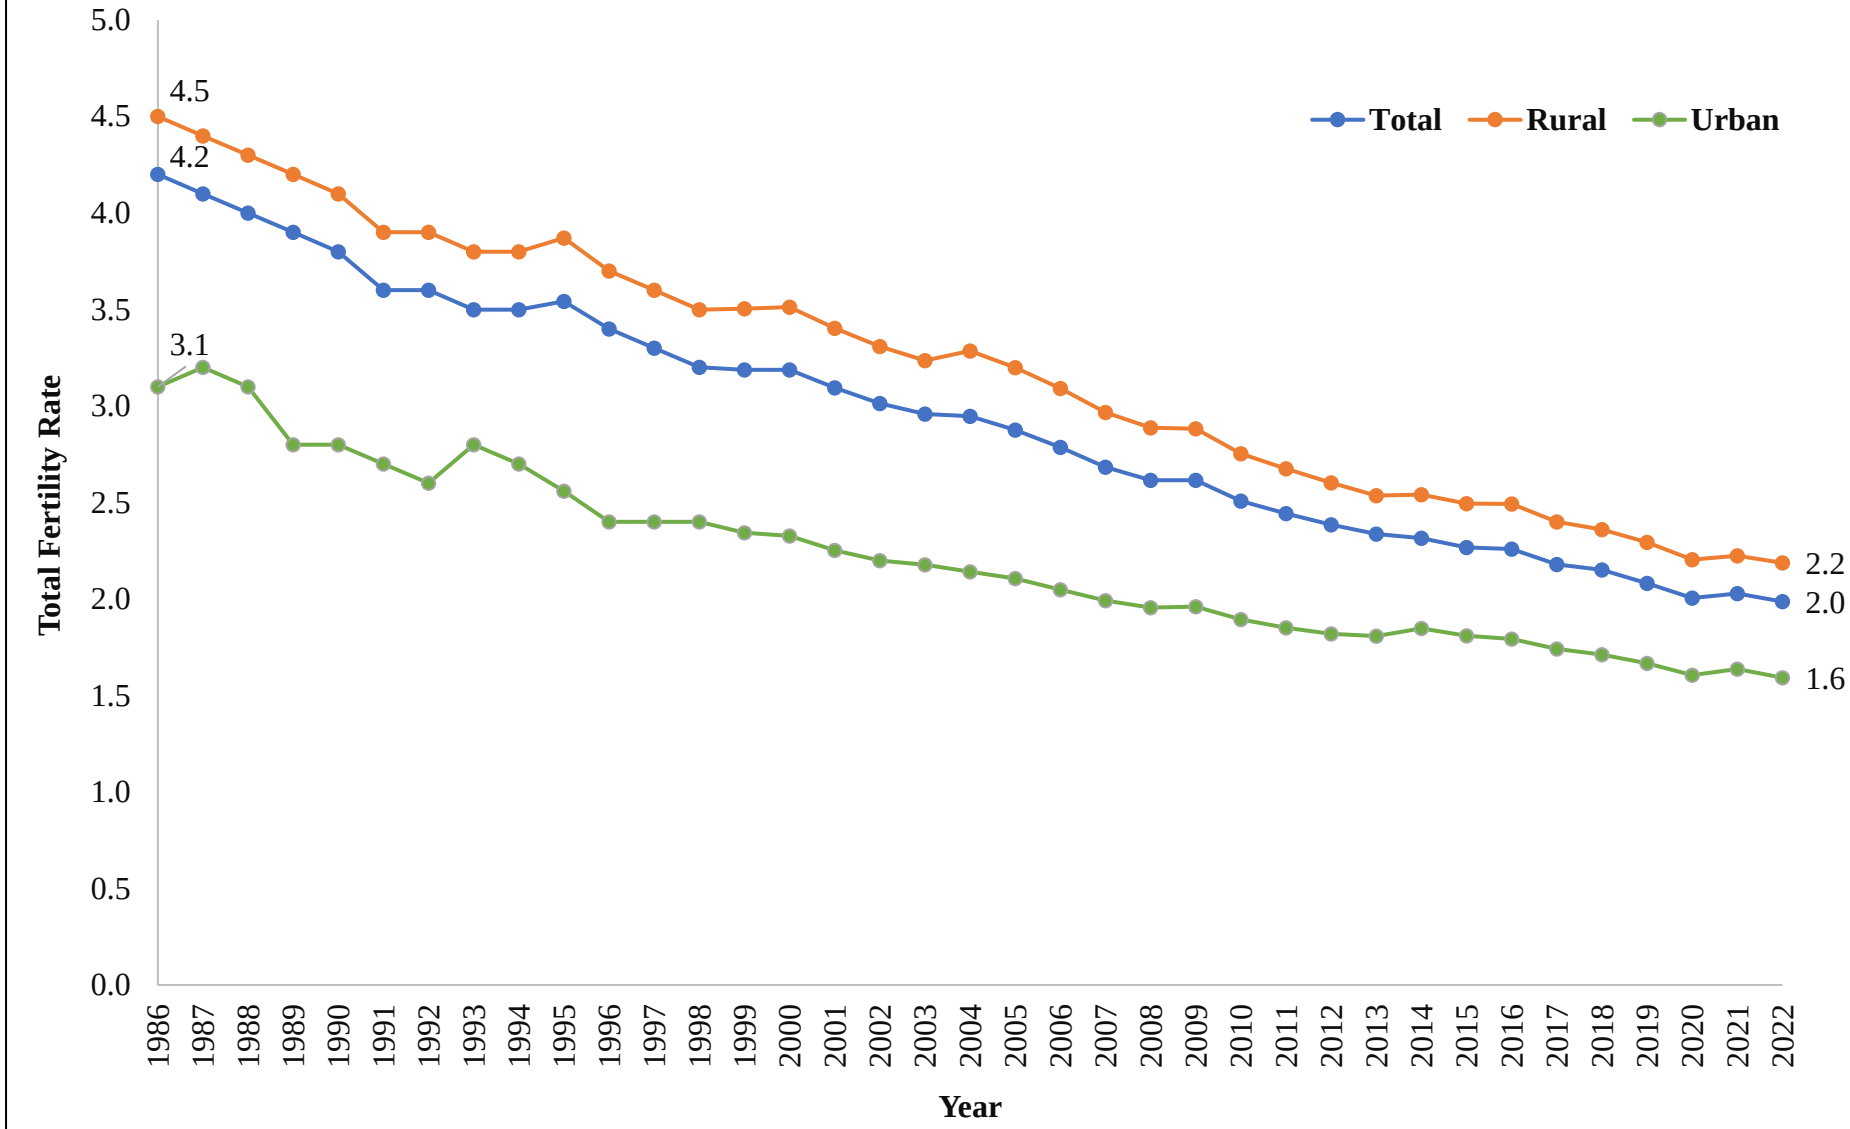

Chart 54: Trends in Total Fertility Rate, 1986 - 2022 by Residence, India

Gross Reproduction Rate:

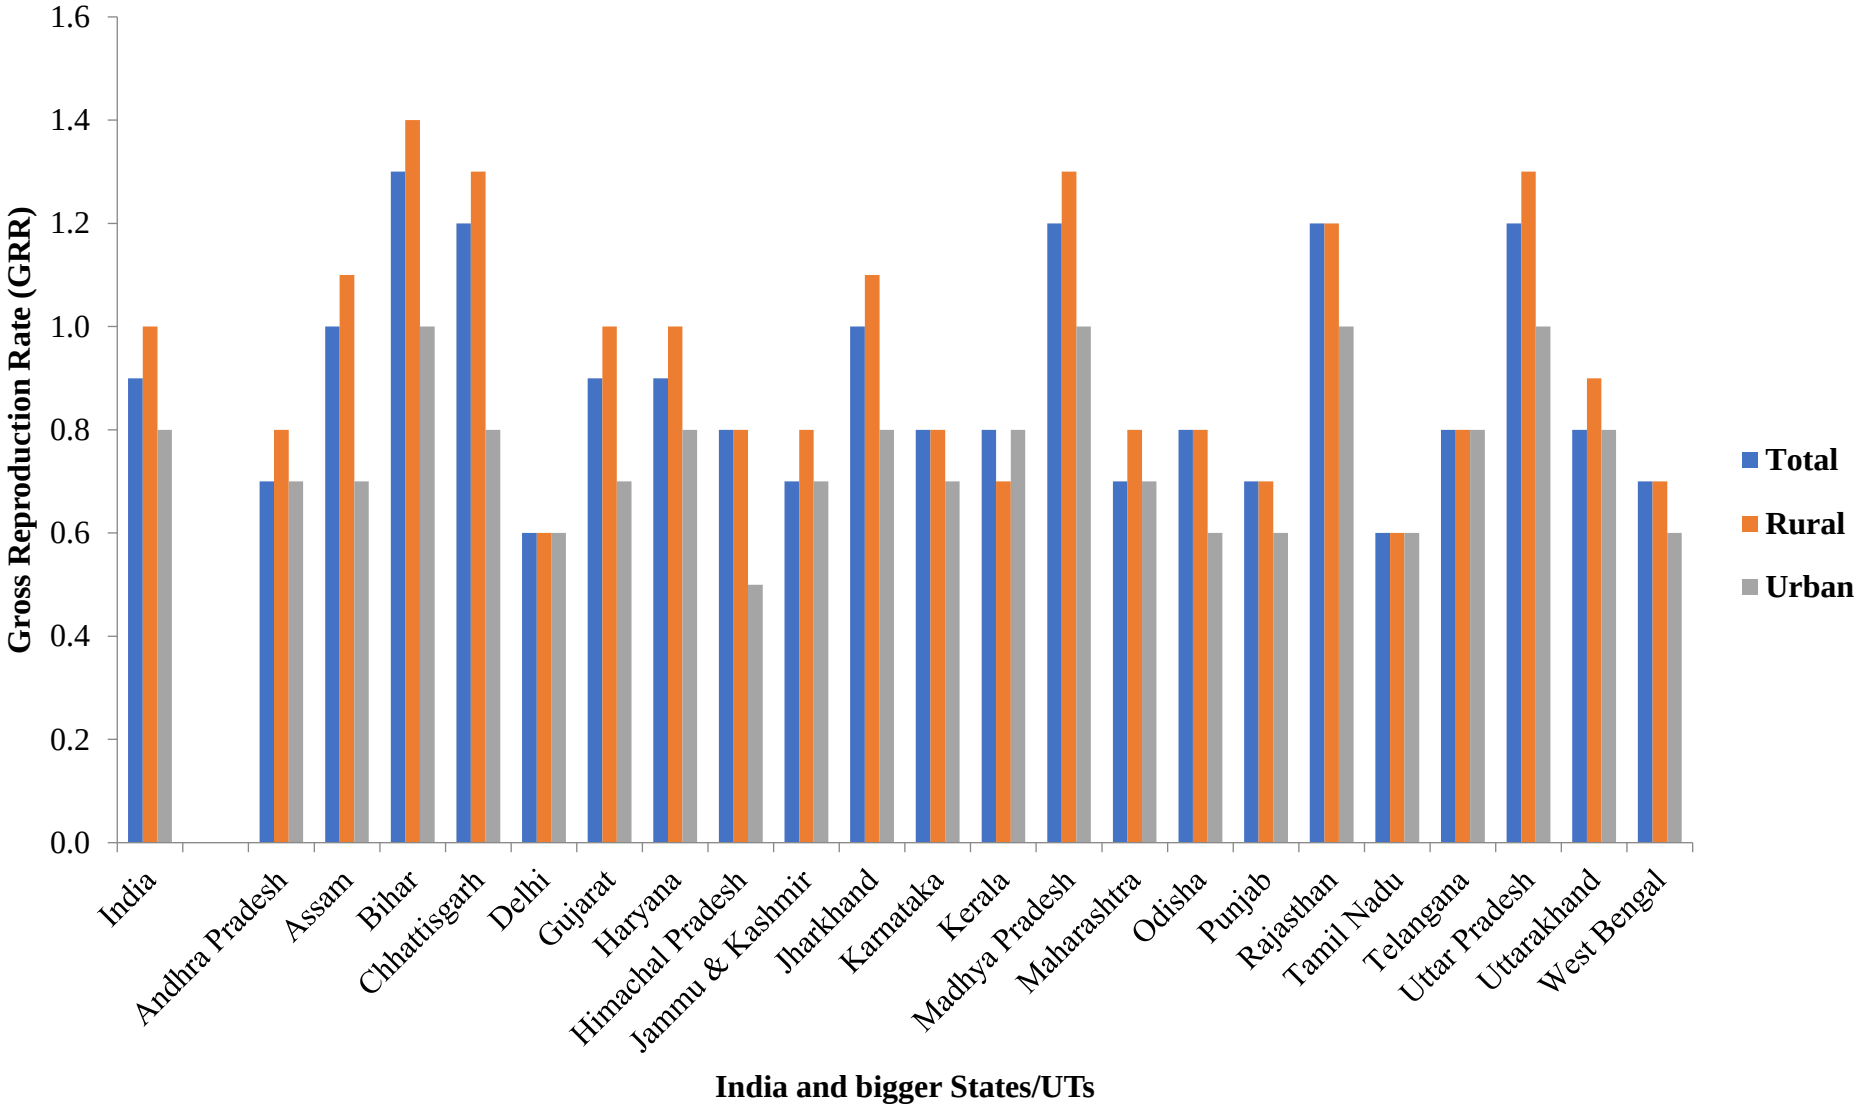

3.21 Another refined measure of fertility that accounts for future mothers is the Gross Reproduction Rate (GRR). It measures the average number of female children a woman is expected to give birth during her entire reproductive span conforming to the Age-Specific Fertility Rates (ASFRs) for a given year, if there is no mortality. The GRR for India for 2022 has been estimated as 0.9, which means that on average, each woman in India is having one daughter who survives to reproductive age and has children of her own. The rural GRR (1.0) was slightly higher than the urban GRR (0.8), which suggests that women in rural areas are having more daughters than women in urban areas. The GRR values for the major States/UTs range from 0.6 in Delhi and Tamil Nadu to 1.3 in Bihar. Most of the States/UTs had lower GRR values for their urban populations compared to their rural populations. Statement 26 provides the GRR by Residence for India and bigger States/UTs and the same is represented in Chart 55.

Statement 26

GRR (Gross Reproduction Rate) by Residence, India and bigger States/UTs, 2022

India and bigger States/UTs	Total	Rural	Urban
India	**0.9**	**1.0**	**0.8**

Chart 55: Gross Reproduction Rate (GRR) by residence, India and bigger States/UTs, 2022

Marital Fertility:

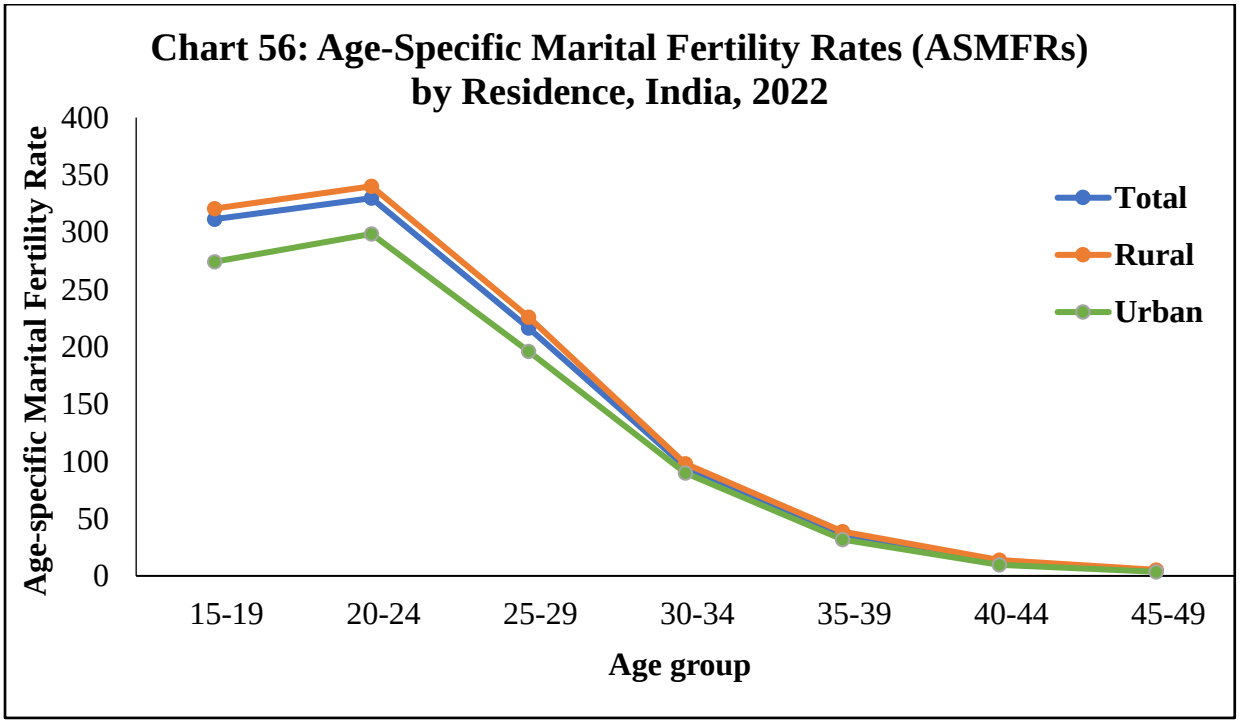

3.22 Marriage is an important event in the social life of any population. In India, population census and large-scale demographic sample surveys invariably collect data on the marital status of population separately for males and females. Age at effective marriage of females is a key factor that influences fertility. Marital distribution of the population enumerated through SRS and the age at effective marriage of females has been discussed in Chapter 2. Based on the distribution of live births by age of married females, Age-Specific Marital Fertility Rates (ASMFRs) are calculated. Statement 27 below provides the estimates of the ASMFRs for India separately for rural and urban areas for the year 2022. The highest Age-Specific Marital Fertility Rates are for women in the 20-24 age group, with a total rate of 329.7 births per 1000 married women, and slightly higher rates for rural areas compared to urban areas. Fertility rates then decreases with increasing age, with the lowest rates for women in the 45-49 age group. Chart 56 depicts ASMFRs by residence for India in 2022.

Statement 27

ASMFRs (Age Specific Marital Fertility Rates) by Residence, India, 2022

(Per thousand)

Age group	Total	Rural	Urban
15-19	311.3	320.6	274.2
20-24	329.7	340.1	298.5
25-29	216.5	225.9	196.0
30-34	95.2	98.0	89.9
35-39	36.2	38.7	31.9
40-44	12.3	13.8	9.6
45-49	4.7	5.3	3.6

3.23 Values of the Age-Specific Marital Fertility Rates (ASMFR) for the year 2022 in bigger States/UTs are given below in Statement 28. Age-Specific Marital Fertility Rate is at peak level in the age-group 20-24 at the National level and the majority of bigger States/UTs; however, for the States/UTs of Assam, Delhi, Himachal Pradesh, Jharkhand,Kerala and West Bengal, the ASMFR is at peak level in the age-group 15-19. There is a significant decline in marital fertility for women aged 30 years onwards, for all bigger States/UTs.

Statement 28

ASMFRs (Age-Specific Marital Fertility Rates), India and bigger States/UTs, 2022

India and bigger States/UTs	15-19	20-24	25-29	30-34	35-39	40-44	45-49

Total Marital Fertility Rate:

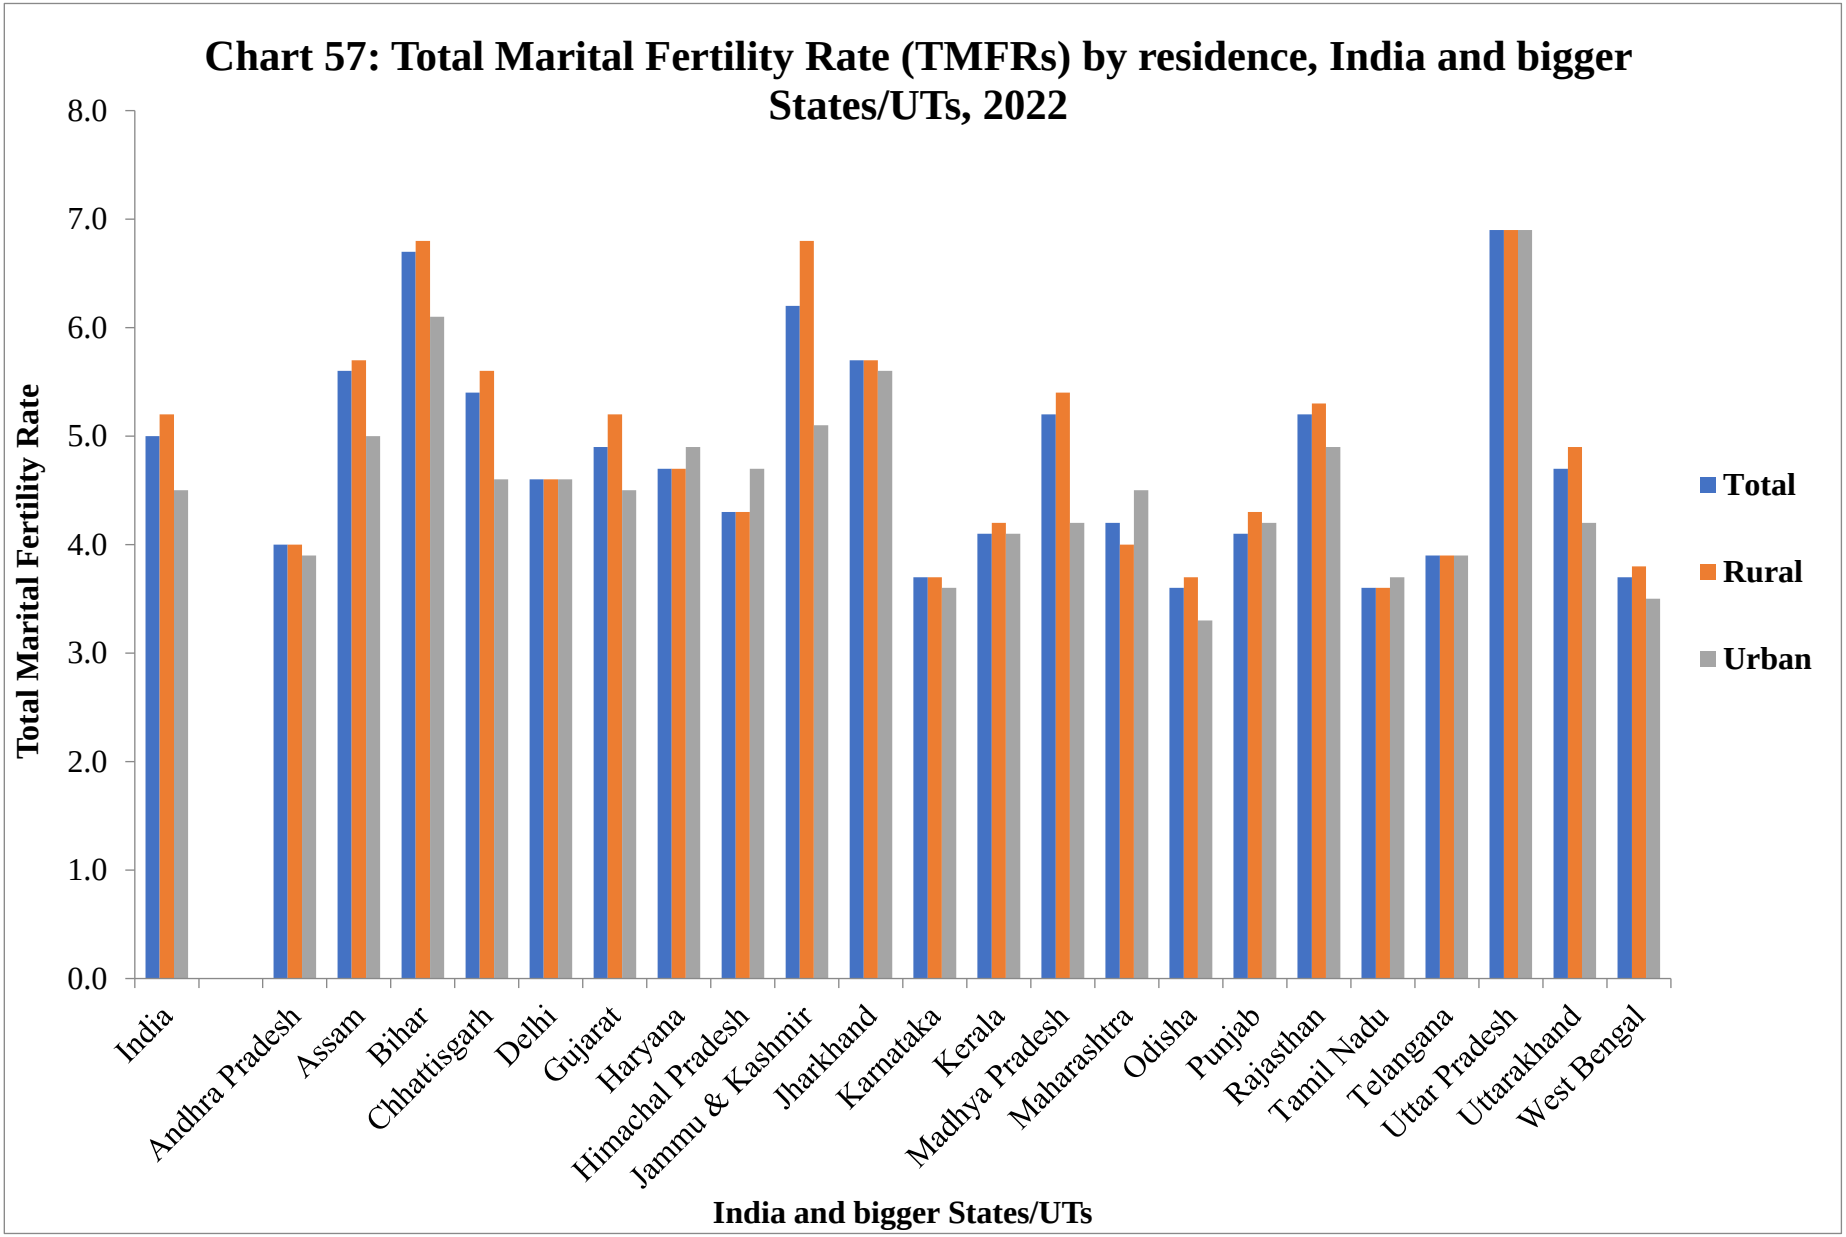

3.24 Like TFR, Total Marital Fertility Rate (TMFR) is the cumulative value of Age Specific Marital Fertility Rates at the end of the reproductive period. It indicates the average number of children expected to be born per married woman during the entire span of her reproductive period, if the ASMFRs continue to be the same and if there is no mortality. The TMFRs worked out on the basis of ASMFRs for the year 2022 are given below in Statement 29 for India and bigger States/UTs separately for rural and urban areas. The TMFR for India in 2022 was 5.0, with a higher TMFR in rural areas (5.2) compared to urban areas (4.5). The TMFRs for the individual States/UTs vary, with the highest TMFR being observed in Uttar Pradesh (6.9) and Bihar (6.7), while the lowest TMFR is seen in Odisha & Tamil Nadu each at 3.6 followed by West Bengal & Karnataka each at 3.7. The data also shows that the TMFR tends to be higher in rural areas compared to urban areas across most of the States/UTs. Chart 57 presents the TMFRs by residence for India and bigger States/UTs.

Statement 29

TMFRs (Total Marital Fertility Rate) by Residence, India and bigger States/UTs, 2022

India and bigger States/UTs	Total	Rural	Urban

Chart 57: Total Marital Fertility Rate (TMFRs) by residence, India and bigger States/UTs, 2022

3.25 Statement 30 below presents the percentage change in the average level of TMFR between the period 2010-12 and 2020-22 in India and bigger States/UTs. The data reveals that there has been an increase in the TMFR for most of the States/UTs and for India as a whole. The TMFR for India has increased from 4.3 in 2010-12 to 5.1 in 2020-22, which is 18.6% increase. The rural TMFR increased by 17.8% from 4.5 to 5.3, while the urban TMFR increased by 21.1% from 3.8 to 4.6. Charts 58, 59 and 60 depict the average TMFR and corresponding rate of change between 2010-12 and 2020-22 for India and bigger States/UTs for Total, Rural and Urban areas respectively.

Statement 30

Percentage change in average Total Marital Fertility Rate (TMFR) between 2010-12 and 2020-22, by Residence, India and bigger States/UTs

India and bigger States/UTs	Total			Rural			Urban

Fertility by Level of Education of the Women:

3.26 Education, more precisely female education, has a direct impact on fertility. To ascertain levels of fertility by the educational status of the women, three indicators viz. General Fertility Rate, Age-Specific Fertility Rate and Total Fertility Rate by the educational status of the women have been worked out separately for rural and urban areas. These are discussed in the subsequent paragraphs.

3.27 Statement 31 below indicates the percentage of female population in the age group 15-49 by the level of education, at the National level and for the bigger States/UTs in 2022. In 2022, in India, 10.3% of women in the age group 15-49 were illiterate, while 89.7% were literate. Among literate women, 4% had no formal education, 7.5% had education level of below primary, 14.9% had primary education, 20.8% had middle school education, 19.3% had education till Class X, 13.3% Women have education till class XII and 9.9% had a graduate degree or above. Looking at the data for individual States/UTs, it can be seen that the percentage of illiterate women varies widely, from a low of 0.4% in Kerala to a high of 19.9% in Bihar. Similarly, the percentage of women with graduate and above education ranges from a low of 3.2% in Bihar to a high of 26.3% in Kerala.

Statement 31

3.28 Statement 32 below presents the estimates of General Fertility Rate (GFR) by educational status of the women for India and bigger States/UTs in 2022. Looking at the different States/UTs, Bihar had the highest GFR across all levels of education, with illiterate women having a GFR of 94.7. Tamil Nadu had the lowest GFR across all levels of education of 43.1 for total literate, whereas Tamil Nadu has lowest GFR for illiterate women of 13.9.

Statement 32

3.29 Statement 33 below presents, at the National level, Age-Specific Fertility Rates by level of education of women separately for rural and urban areas. The data shows that the Age-Specific Fertility Rate is highest in the 20-24 age group for Illiterate and women without formal education. For all other groups of women with different levels of education, the Age-Specific Fertility Rate is highest in 25-29 age-group. The Age-Specific Fertility Rate is highest for illiterate women and decreases with an increase in the level of education. The rate was higher in rural areas than in urban areas for all age groups and education levels. Chart 61, 62 and 63 depict the Age-Specific Fertility Rate by level of education of women for Total, Rural and Urban areas respectively.

Statement 33

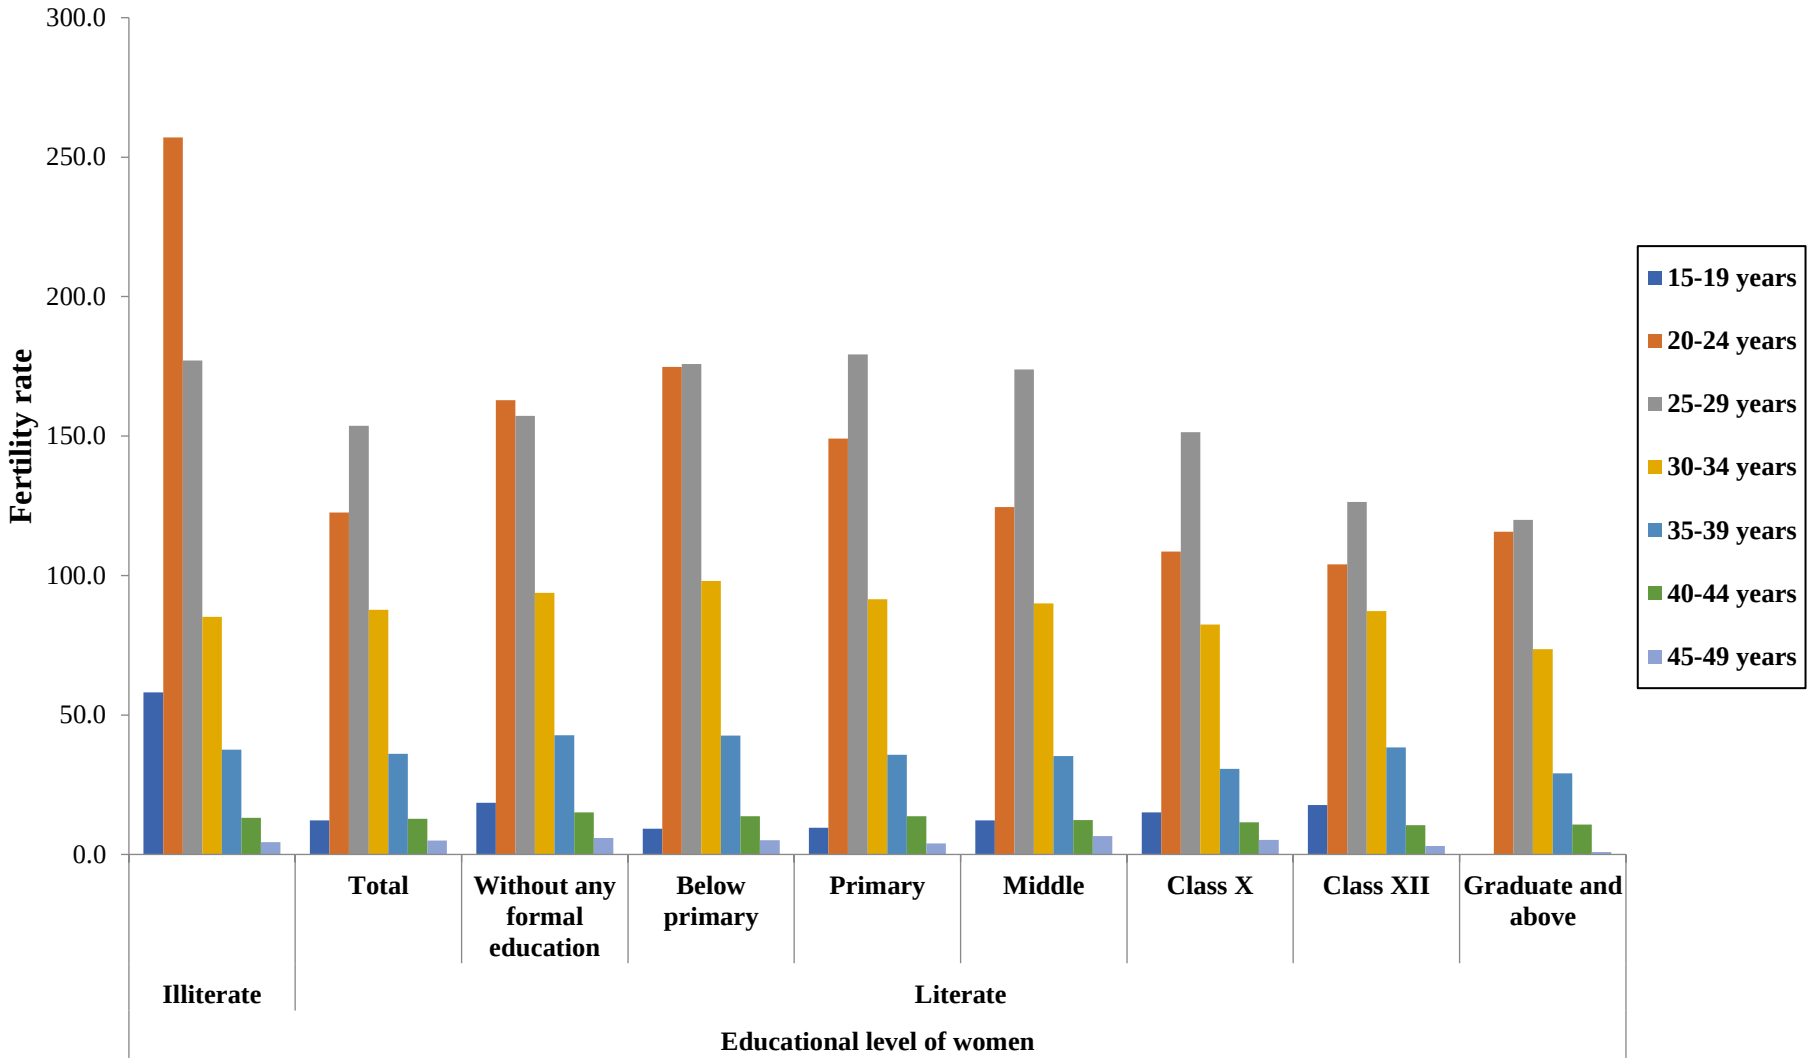

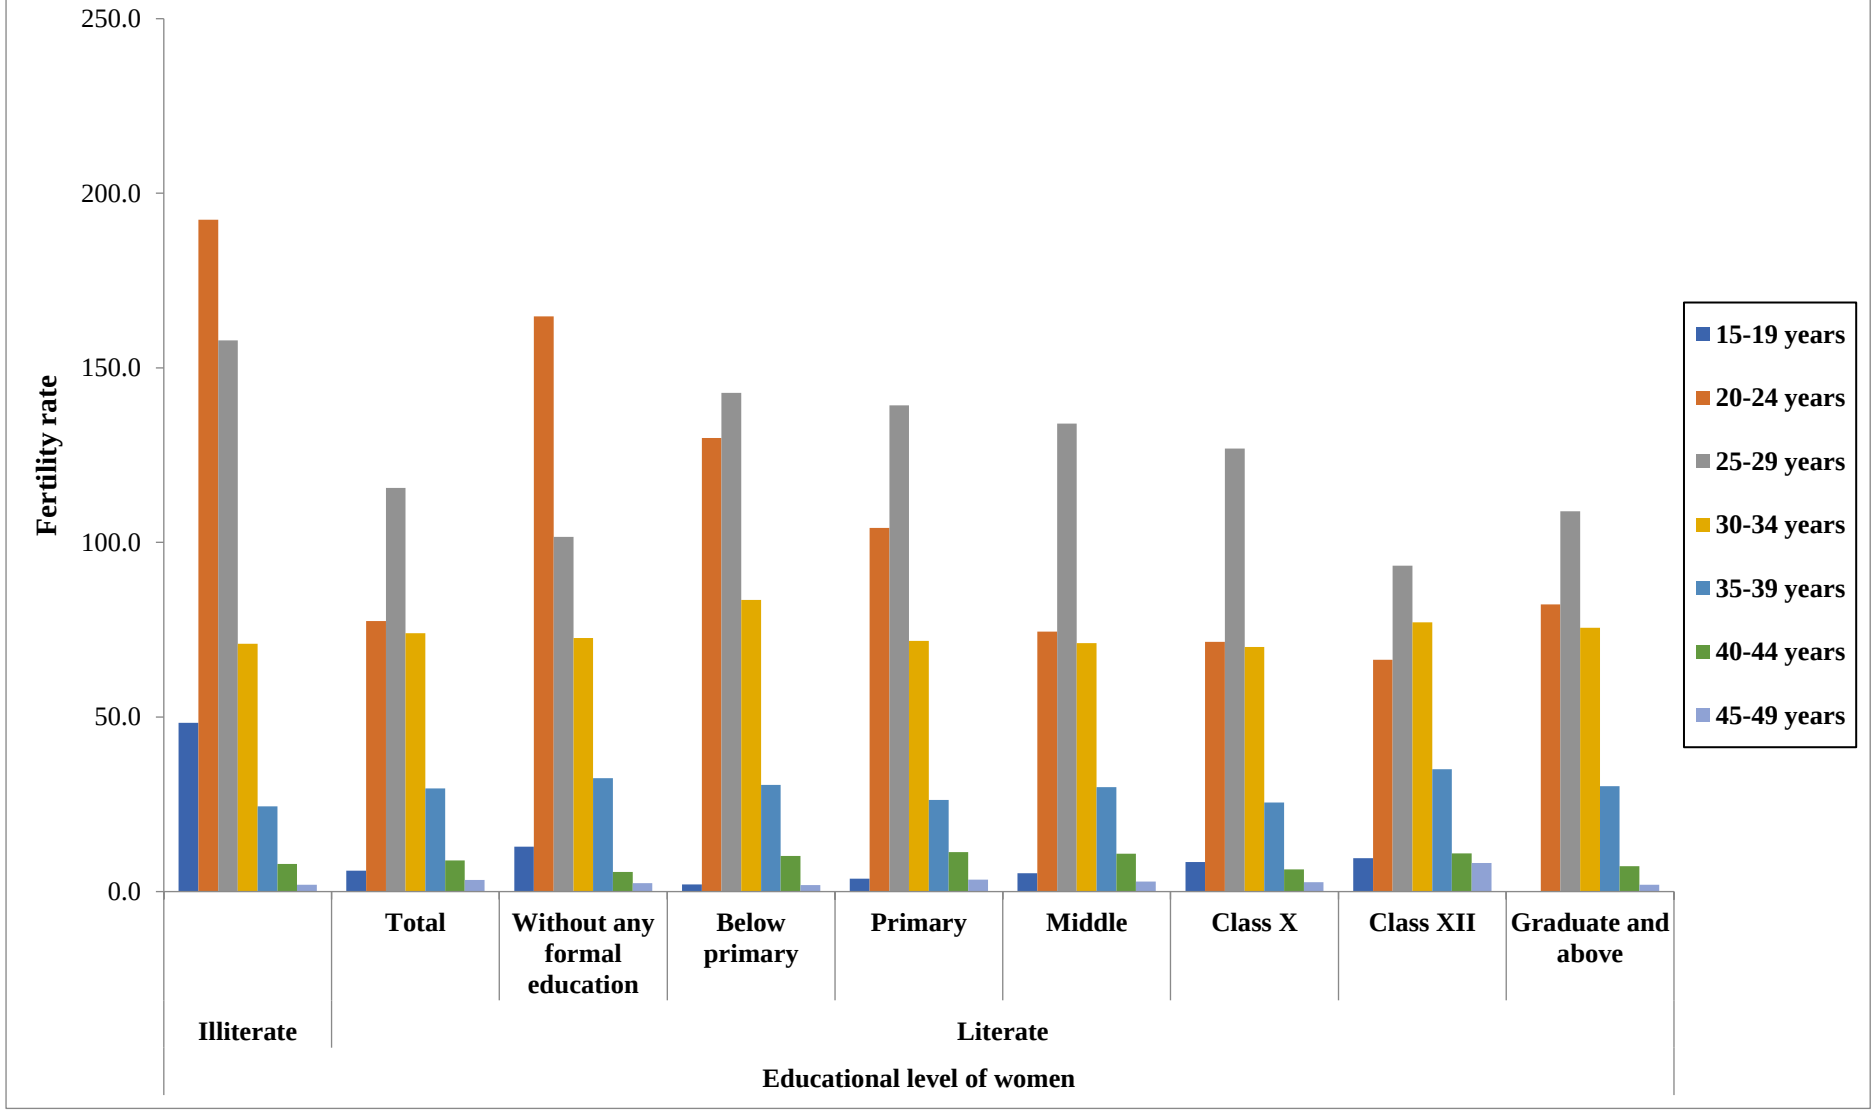

Chart 63: Age-Specific Fertility Rate by level of education of women, India, 2022 -URBAN

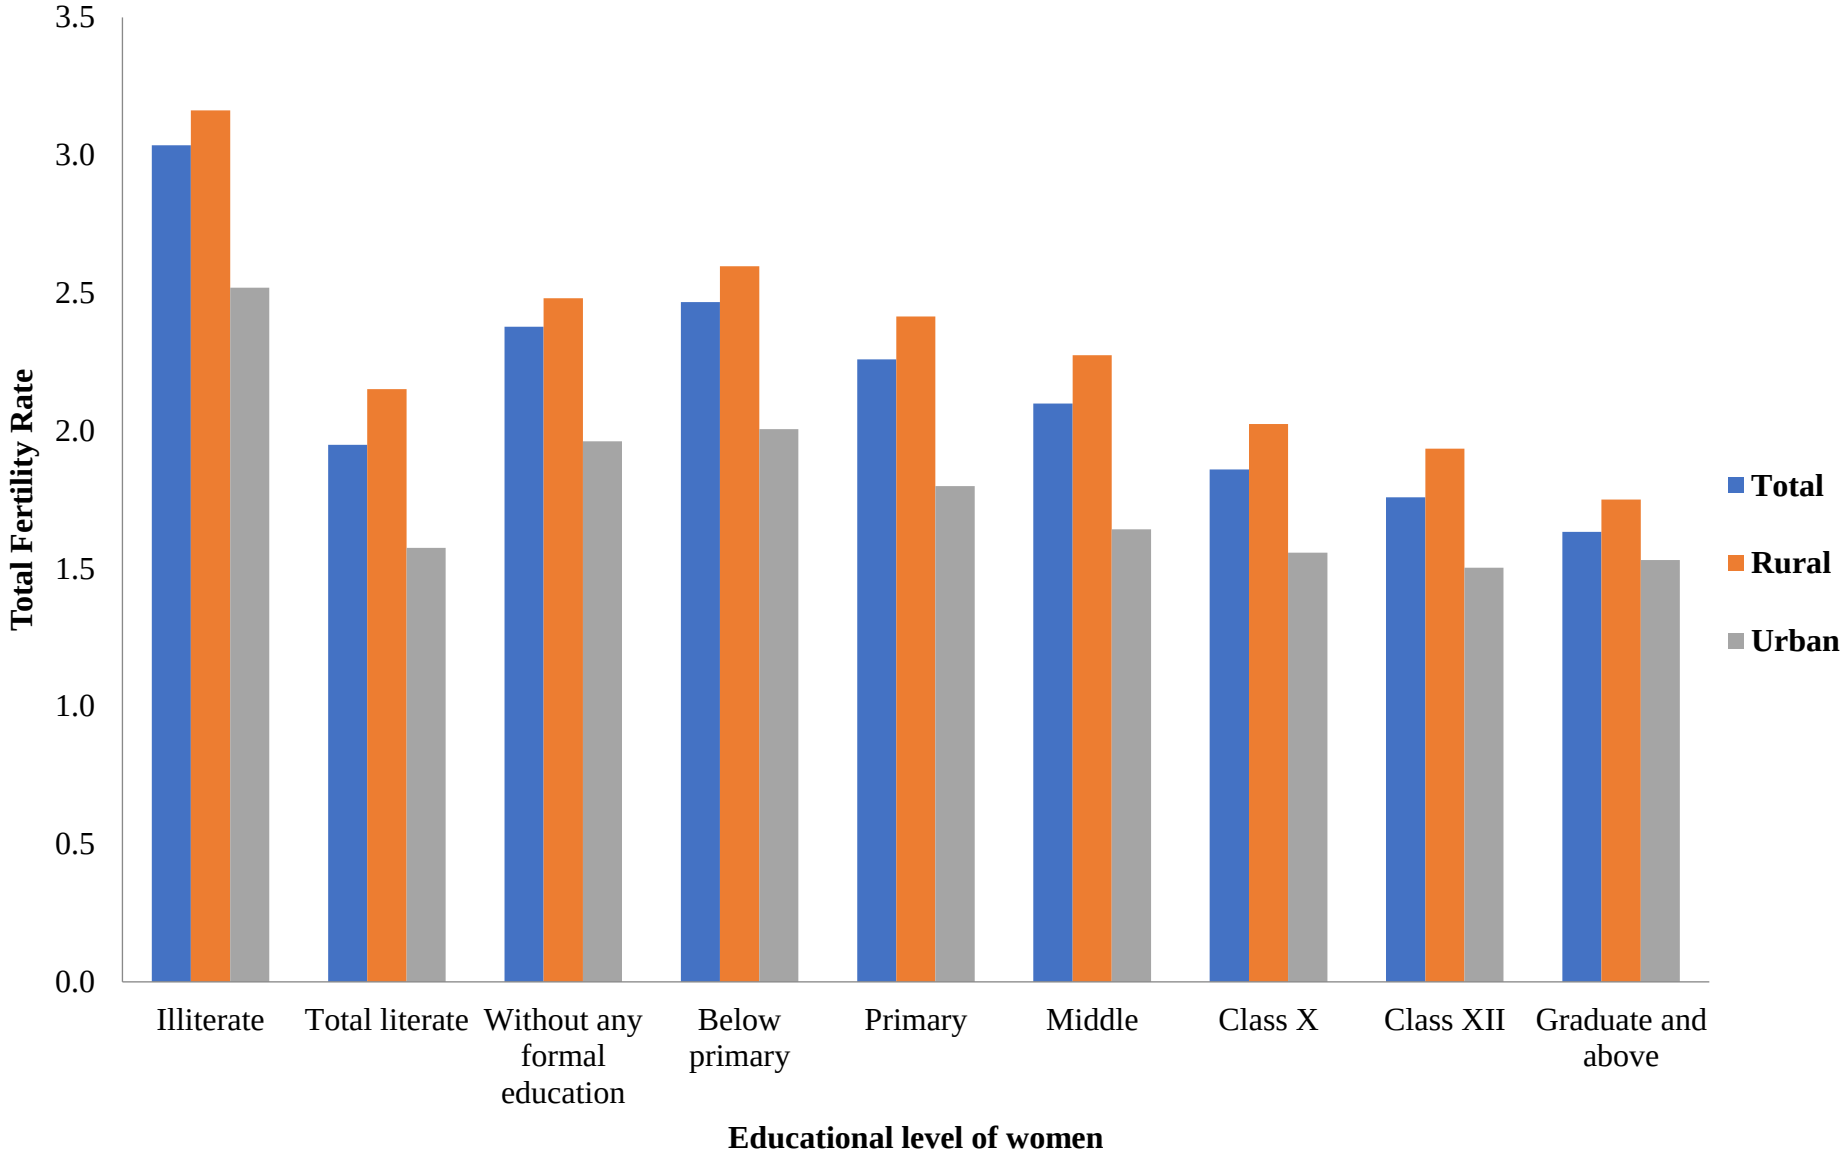

3.30 Total Fertility Rates by education levels of the women for India and bigger States/UTs for 2022 are presented below in Statement 34. For India as a whole, the TFR was 3.0 for illiterate women and 1.9 for literate women in 2022. Among literate women, those without any formal education had the TFR at 2.4, followed by those with below primary education (2.5), primary education (2.3), middle education (2.1), class X (1.9), class XII (1.8), and graduate and above (1.6). The TFR classified by education levels also varies across different States/UTs of India. Among the bigger States/UTs, Chhattisgarh had highest TFR among illiterate women (3.9), while Bihar had the highest TFR for literate women (2.9). On the other hand, Tamil Nadu had the lowest TFR for illiterate women (1.6) and Delhi & Tamil Nadu has lowest TFR for literate women at 1.3. The TFR for other States/UTs falls between these ranges. Chart 64 presents, at the National level, Total Fertility Rate by level of education of women separately for rural and urban areas for the year 2022. The TFR by levels of education of the women for India and bigger States/UTs by place of residence are given in Table-4.

Statement 34

Total Fertility Rate by Level of Education of Women, India and bigger States/UTs, 2022

Chart 64: Total Fertility Rate by level of education of women, India, 2022

Birth Order:

3.31 Information on order of the live birth and interval between current and previous live births are also collected in SRS from 1990 onwards. These provide useful information on spacing of children and level of fertility. The estimated percentages on order of live birth and birth interval for India and bigger States/UTs are given in Tables 5, 6 and 7. Based on these tables, State-wise comparative Statements are presented below.

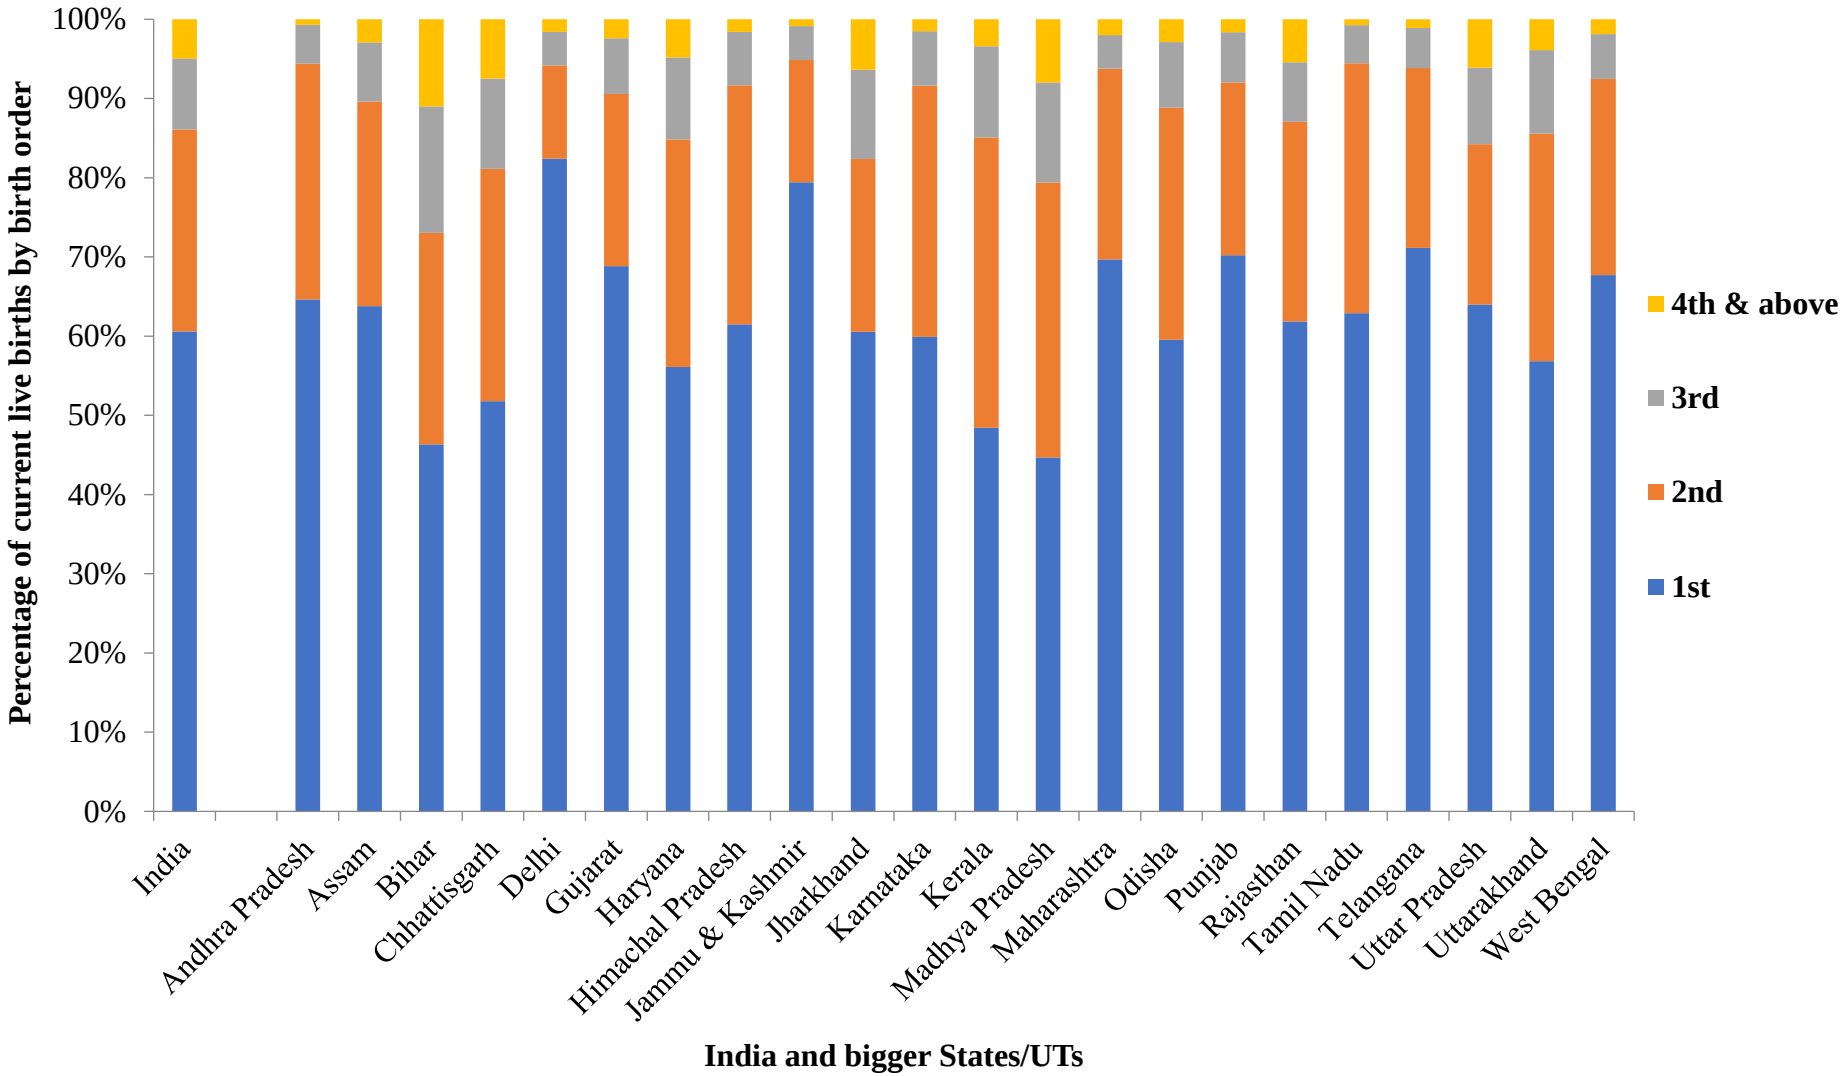

3.32 The percentage distribution of live births by birth order for India and bigger States/UTs for the year 2022 is presented below in Statement 35. As per 2022 data, in India, 64.0% of current live births are first-order births, 23.0% are second-order births, 8.3% are third-order births and 4.7% are fourth or higher-order births. As per 2022 data, among the bigger States/UTs, Telangana has the highest percentage of first-order births at 84.9%, while Kerala has the lowest at 50.0%. Kerala has the highest percentage of second-order births at 34.6% , while Telangana has the lowest at 12.7%. Kerala has the highest percentage of third-order births at 12.1%, while Telangana has the lowest at 2.1%. Bihar also has the highest percentage of fourth or higher-order births at 9.5%, while Telangana has the lowest at 0.3%. Chart 65 shows the percentage distribution of current live births by birth order for India and bigger States/UTs.

Chart 65: Percentage distribution of current live births by Birth Order, India and bigger States/UTs, 2022

3.33 Statement 36 below presents the percentage distribution of current live births by birth order and residence for India and bigger States/UTs. For India as a whole, 62.6% of live births were first order and 23.1% were second order, while 8.9% were third order and 5.4% were fourth or higher order in rural areas. In urban areas, 67.9% of live births were first order and 22.8% were second order, while 6.5% were third order and 2.8% were fourth or higher order. Among the larger States/UTs, the percentage distribution of live births by birth order and residence is varied. Charts 66 and 67 depict the percentage distribution of current live births by birth order for rural and urban areas respectively.

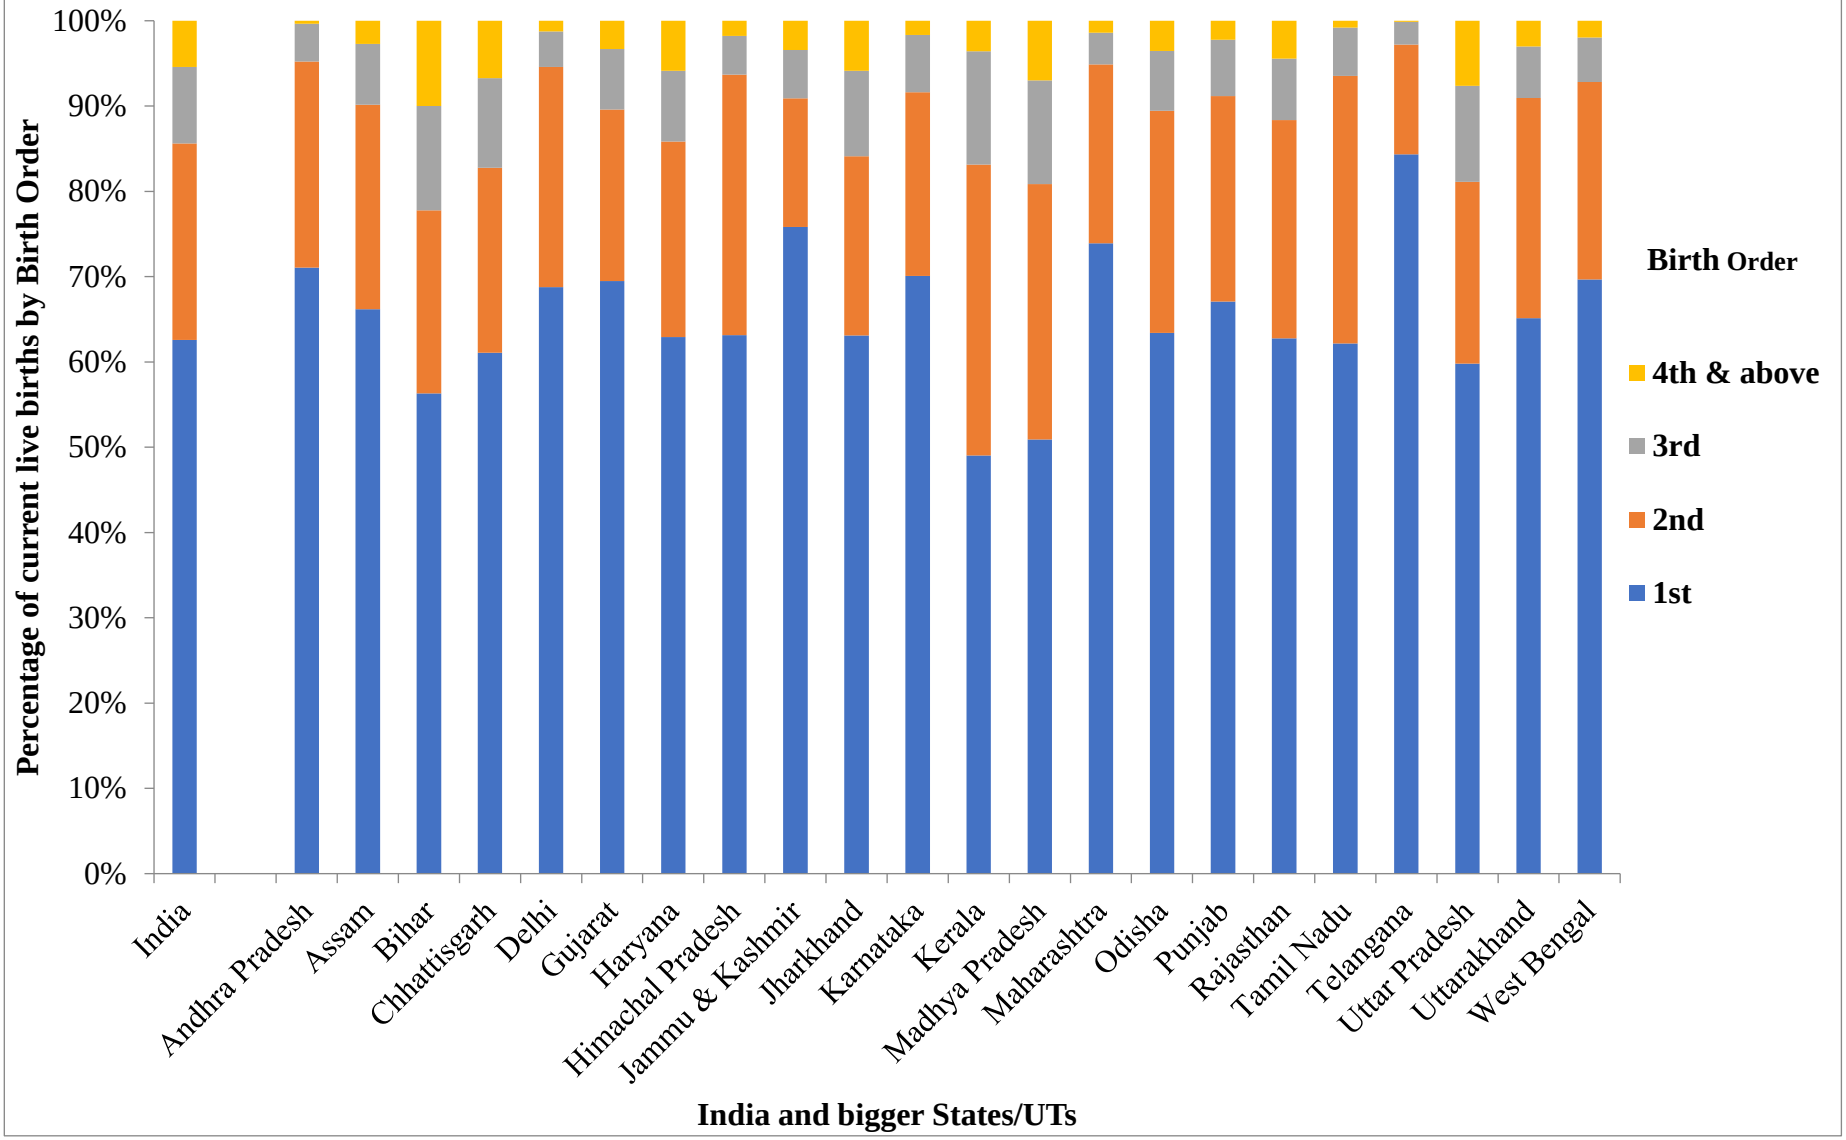

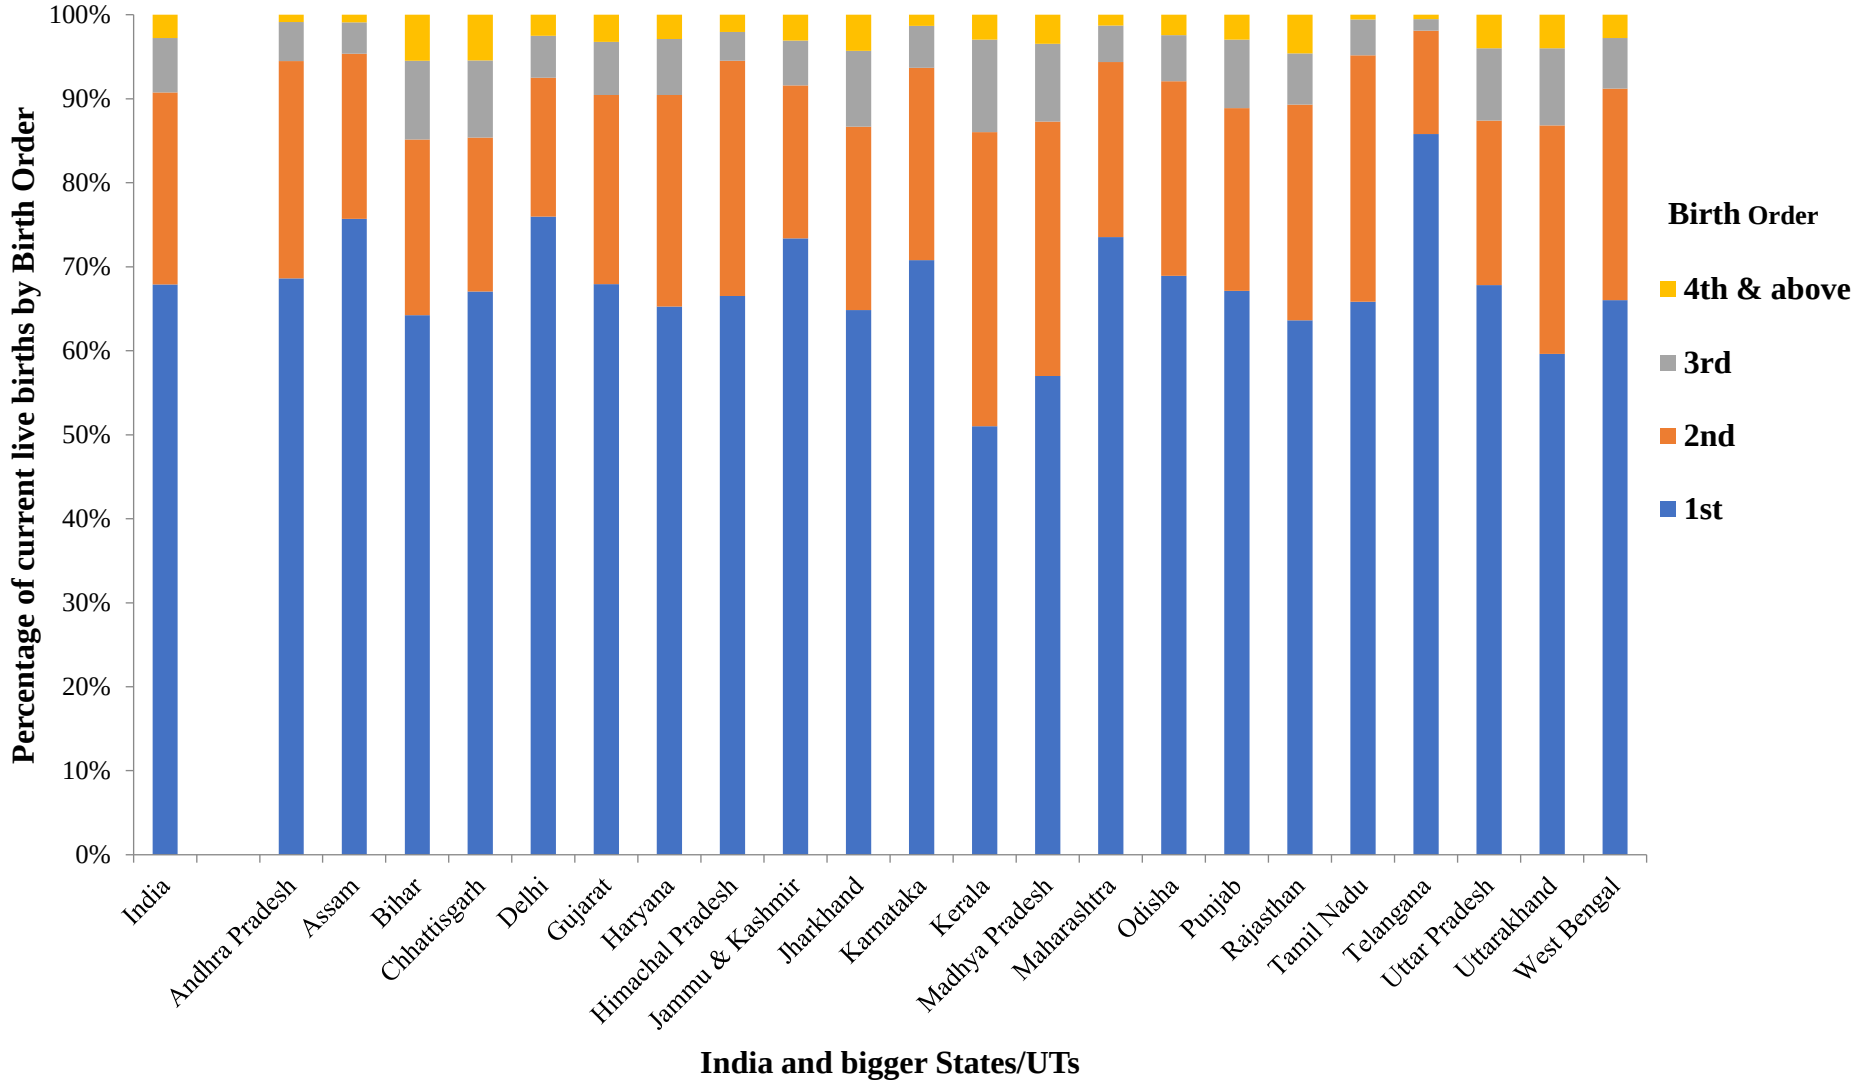

Chart 67: Percentage distribution of current live births by Birth Order, India and bigger States/UTs, 2022 - URBAN

Birth Interval:

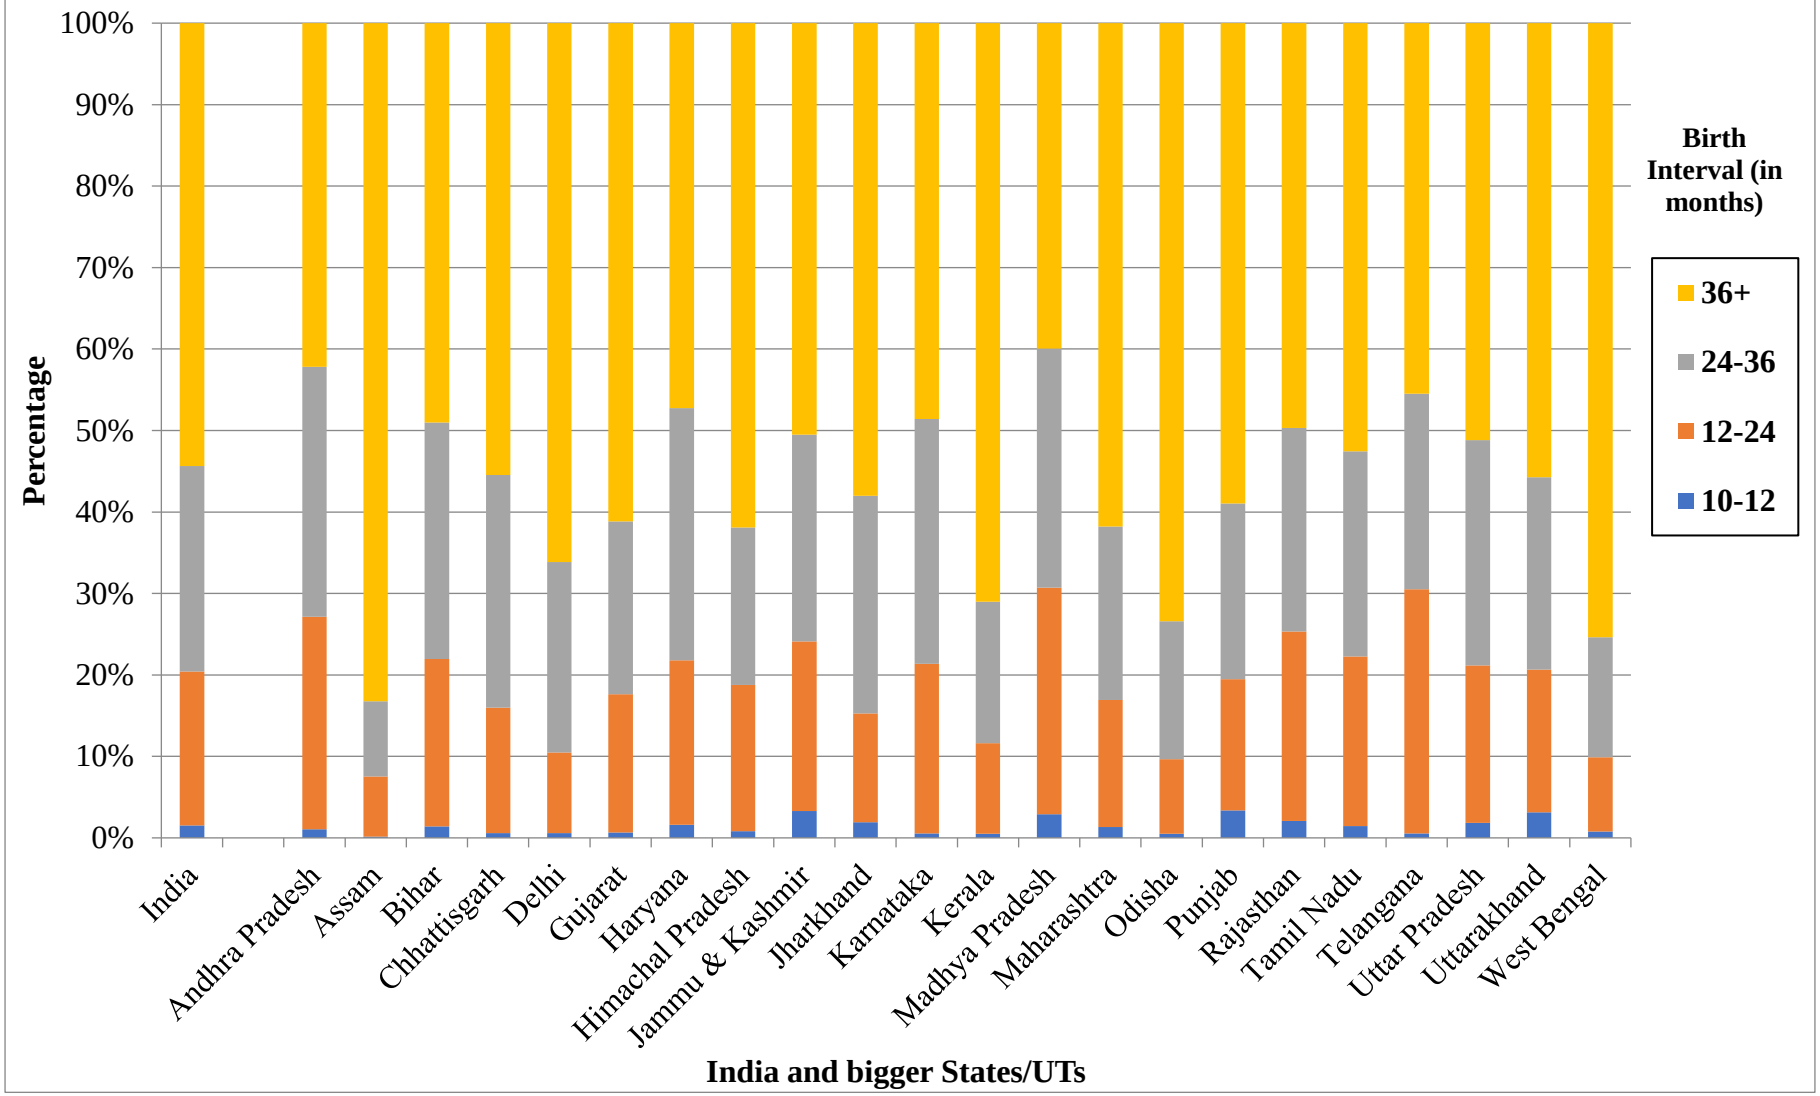

3.34 The percentage distribution of second and higher-order live births by interval between current and previous live birth is shown below in Statement 37 for India and bigger States/UTs for the year 2022. For India as a whole, 1.5% of second and higher-order live-births occurred within 10-12 months of the previous live birth, 18.9% occurred within 12-24 months, 25.2% occurred within 24-36 months, and 54.3% occurred 36 months or more after the previous live birth. Looking at the individual States and UTs, we can see that the percentage distributions vary considerably. The percentage of second and higher-order live-births occurred within 10-12 months of the previous live birth were ranging from 0.2% in Assam to 3.4% in Punjab. The percentage of second and higher-order live-births occurred after 36 months or more after the previous live birth is ranging from 39.9% in Madhya Pradesh to 83.2% in Assam. Chart 68 presents the percentage distribution of second and higher-order live-births by interval for India and bigger States/UTs.

Statement 37

Percentage distribution of second and higher order live births by interval, India and bigger States/UTs, 2022

Chart 68: Percentage distribution of second and higher order live births by Birth Interval, India and bigger States/UTs, 2022

3.35 Statement 38 below presents the percentage distribution of second and higher-order live births by the interval between current and previous live birth separately for rural and urban areas in 2022. In India, 1.6% of second and higher-order live births in rural areas occurred within 10-12 months of the previous live birth, while 19.8% , 26.6% and 52.0% of births occurred within 12-24 months, 24-36 months, and 36+ months, respectively. In urban areas, the percentage distribution of live births by interval was 1.2%, 16.0%, 21.1% and 61.7%, respectively. The percentage distribution of live births by interval and residence varied across the different States and UTs. Charts 69 and 70 give the percentage distribution of second and higher order live births by interval for rural and urban areas respectively.

Medical attention received by Mother at delivery:

3.36 While recording details of every outcome of pregnancy during continuous enumeration and half yearly survey, the enumerators and supervisors are required to enquire about the type of medical attention received by the mother at the time of delivery/abortion of the new born. Statement 39 below gives the percentage distribution of live births recorded in the year 2022 by type of medical attention received by the mother at the time of delivery for India and bigger States/UTs separately by rural and urban areas. Looking at the data, we can see that the majority of live births in India were attended by medical professionals in government hospitals, accounting for 71.4% of all live births followed by 22.9% of live births in private hospitals. Only 2.8% of live births were attended by qualified professionals, while 2.1% were attended by untrained functionaries and others and just 0.8% of live births received no medical attention in 2022. The data also shows that the percentage distribution of live births by type of medical attention received varies by residence. For example, in India as a whole, a higher proportion of live births in rural areas were attended by medical professionals in government hospitals (76.0%) compared to urban areas (57.2%). Conversely, a higher proportion of live births in urban areas were attended by medical professionals in private hospitals (39.8%) compared to rural areas (17.5%). No medical attention was received by mothers in case of (0.9%) and (0.4%) of cases in rural and urban areas respectively.

3.37 The percentage distribution of live births by type of medical attention received varied across States and UTs. Births attended by medical professionals in government hospitals varies from 30.8% Kerala to 96.3% in Jammu and Kashmir. In contrast, medical attention at the time of delivery were attended by medical professionals in private hospitals vary from 3.1% in Jammu & Kashmir to 69.2% in Kerala. Charts 71, 72 and 73 depict the percentage distribution of live births by type of Medical Attention received by the mother for Total, Rural and Urban areas respectively.

CHAPTER 4

ESTIMATES OF MORTALITY INDICATORS

Mortality is one of the basic components of population change and the related data is essential for demographic studies and public health administration. It is the principal ingredient for population projections and life tables. Information on death events recorded in SRS is used to estimate mortality indicators. The various measures of mortality published under SRS are Crude Death Rate (CDR), Under-five Mortality Rate (U5MR), Infant Mortality Rate (IMR) and its components, Age-Specific Mortality Rates (ASMR), Still Birth Rate (SBR) and Peri-natal Mortality Rate (PMR).

4.2 SRS has continued to provide data for estimating various mortality measures since its inception. The Crude Death Rate at all India level has declined from 14.9 to 12.5 during the decade 1971 to 1981. In the next three decades ending 1991, 2001 and 2011, the Crude Death Rate reached 9.8, 8.4, and 7.1 respectively and thereafter from 7.5 to 6.8 during 2021 to 2022. The decline has been steeper in rural areas as compared to urban areas meaning the decline in rural areas is greater while the decline in urban areas is gradual. The Infant Mortality Rate has shown a considerable decline from 129 per 1000 live births in 1971 to 110 in 1981 and from 80 in 1991 to 26 in 2022.

4.3 Apart from the all India scenario, this chapter presents data on mortality indicators for bigger States/UTs by sex, residence and broad age-groups. Besides Under-Five Mortality Rate, it includes data on Infant Mortality and its components viz., Neo-natal Mortality and Post Neo-natal, Peri-natal Mortality and changes in mortality over the last decade. It also includes data on medical attention before death.

4.4 Apart from the mortality indicators at State and National levels, this report also includes estimates of death rates at sub-State, viz. NSS Natural Division Level. The Table 11 in the annexure to this report contains data on Death Rate and Infant Mortality Rate besides birth rate for 71 Natural Divisions of 22 bigger States/UTs.

4.5 Statement 40 below provides the Crude Death Rate (CDR) by residence for India and States/UTs for the year 2022. Although the death rate has been estimated for all the States/UTs of India, the other mortality indicators are presented only for bigger States/UTs in the report. The overall CDR for India in 2022 was 6.8, with a higher CDR of 7.2 in rural areas and a lower CDR of 6.0 in urban areas. Among the bigger States/UTs, Chhattisgarh had the highest CDR of 9.0, while Delhi had the lowest CDR of 4.6. Among the smaller States, Manipur and Sikkim had the lowest CDR of 4.9 each and Goa had the highest CDR of 8.2. Among the smaller UTs, Puducherry had the highest CDR of 6.6, while Chandigarh had the lowest CDR of 4.2. Based on the figures in the Statement 40 given below, the graphical representation of death rate of States/UTs by residence is depicted in Charts 74 and 75. The estimated Age-Specific Death Rate by sex and residence for India and bigger States/UTs has been detailed in Table 8.

Chart 75: Distribution of bigger States/UTs by values of Death Rate for Rural and Urban areas, 2022

4.6 Statement 41 given below shows the percentage change in the level of Crude Death Rate between the period 2010-12 and 2020-22 for India and bigger States/UTs. Overall, there was a decrease in the Crude Death Rate in India from 7.1% in 2010-12 to 6.8% in 2020-22, representing a decline by 4.2%. The rural Crude Death Rate also decreased from 7.6% to 7.2%, a percentage change of -5.3%, while the urban Crude Death Rate decreased from 5.7% to 5.9%, a percentage change of 3.5%. Among the bigger States and Union Territories, there was a significant decrease in the Crude Death Rate for Assam (-20.0%), Uttar Pradesh (-15.2%) and Jharkhand (-14.5%), while the highest increase in the Crude Death Rate was for Punjab (17.6%) followed by Chhattisgarh (13.9%), Kerala (12.9%) and Haryana (10.8%). Other States and Union Territories showed more modest changes in the Crude Death Rate over the period. Chart 76, 77 and 78 depict the average death rate between 2010-12 and 2020-22 in India and bigger States/UTs for Total, Rural and Urban areas respectively along with the respective rate of change. Chart 79 shows the year-wise death rate from 1985 to 2022 by Residence for India.

4.7 Statement 42 given below presents the estimated Crude Death Rate for India by residence separately for males and females in 2022. It is observed that female death rate is lower than male death rate both in rural and urban areas. While the total CDR in India in 2022 was 6.8 per 1,000 population. The CDR for males (7.7 per 1,000 population) was higher than that for females (5.8 per 1,000 population). The CDR was also higher for rural areas compared to urban areas. Chart 80 represents the Crude Death Rate by Sex and Residence for India.

Statement 42

Crude Death Rate by Sex and Residence, India, 2022

Residence	Total	Males	Females
Total	6.8	7.7	5.8
Rural	7.2	8.2	6.1
Urban	6.0	6.7	5.2

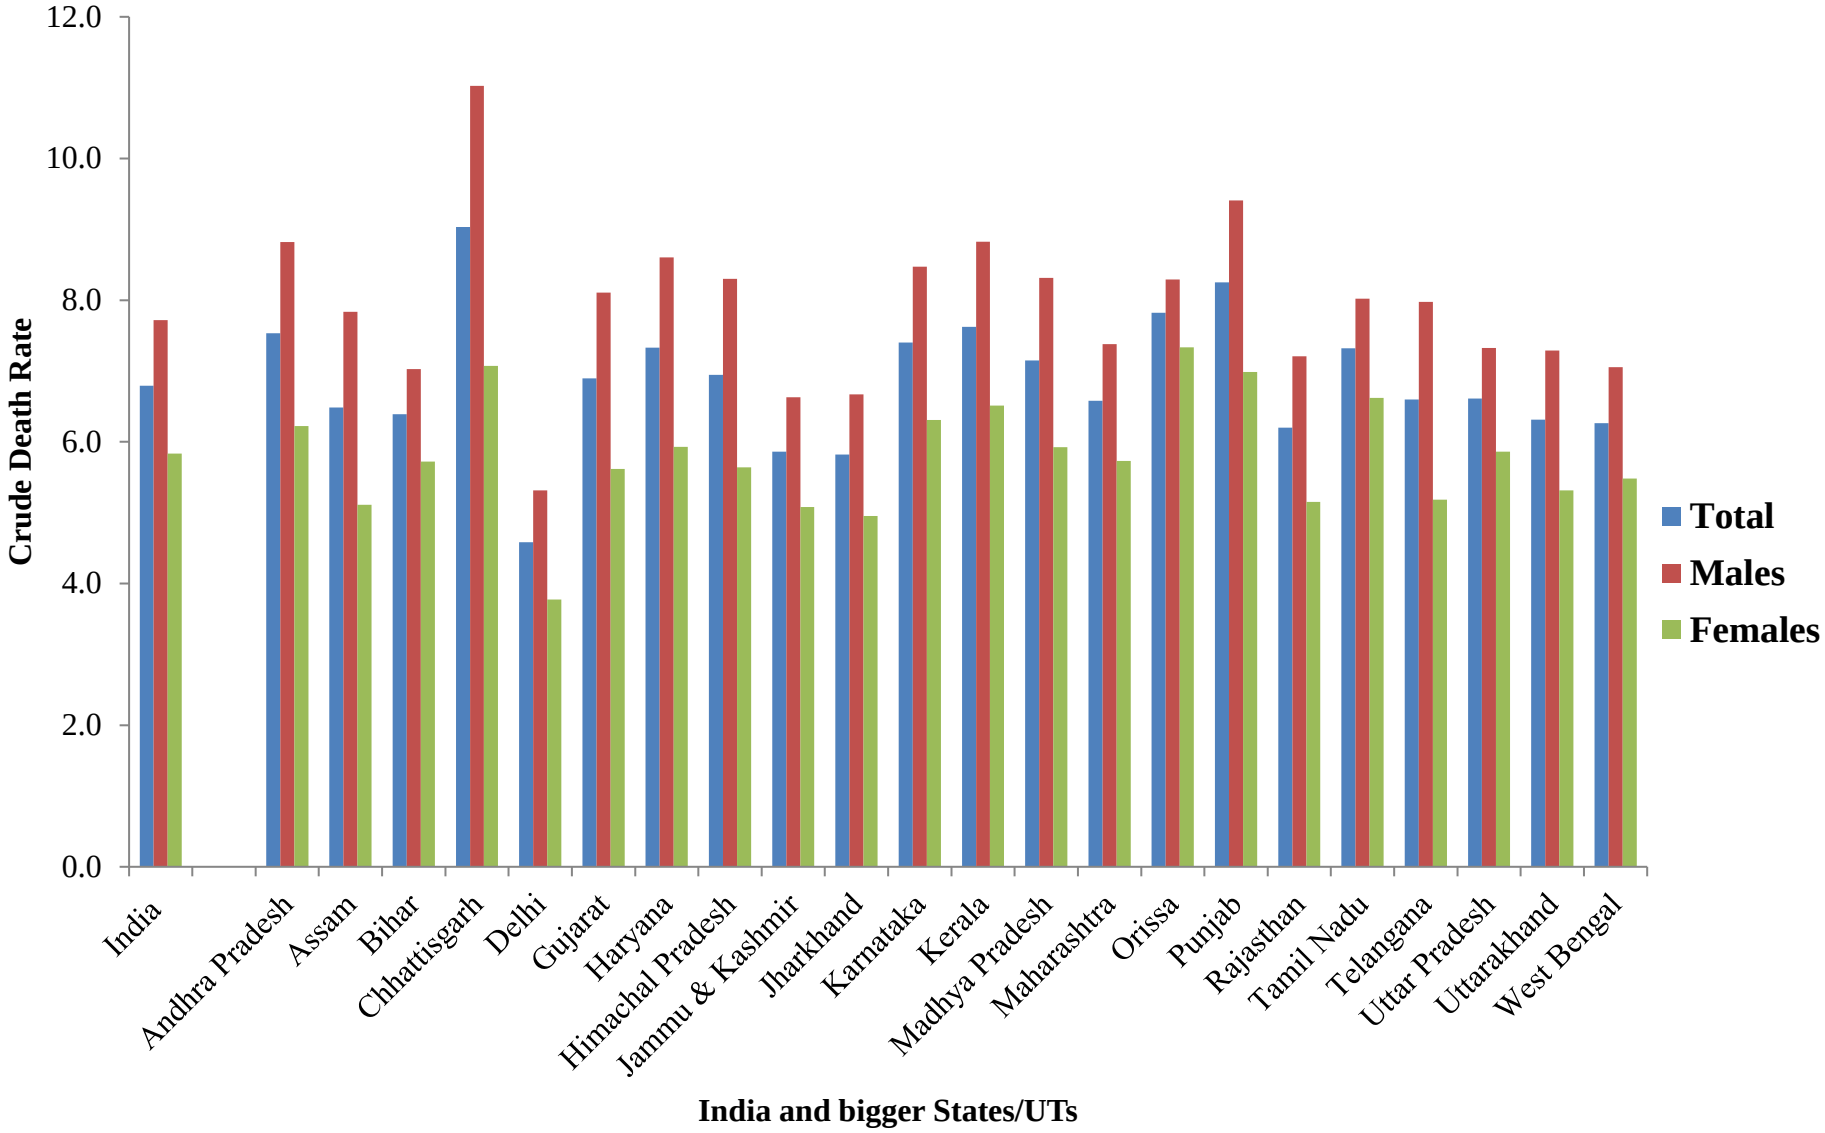

4.8 Crude Death Rates for males and females in the bigger States/UTs for 2022 are shown below in Statement 43. Among the bigger States/UTs in India, the highest CDR was recorded in Chhattisgarh (9.0) and the lowest rate in Delhi (4.6). The Crude Death Rate for males is generally higher than that for females across all States and Union Territories presented. For Males, the highest death rate was recorded in Chhattisgarh (11.0) and the lowest in Delhi (5.3). For females, the death rate was highest in Odisha (7.3) and lowest in Delhi (3.8) in 2022. Chart 81 shows Crude Death Rate by Sex for India and bigger States/UTs.

Chart 81: Crude Death Rate by Sex, India and bigger States/UTs, 2022

Deaths by broad age-group:

4.9 Statement 44 given below provides the percentage distribution of deaths by broad age groups for India and bigger States/UTs for the year 2022. The data reveals that a significant proportion of deaths in India and most of the bigger States/UTs occurred among people aged 60 years and above, with the highest proportion recorded in Kerala (76.9%) followed by Himachal Pradesh (73.8), Tamil Nadu (66.1%), and Maharashtra (65.7%). In the other age groups, the '<1 year' age group had the highest proportion of deaths in Uttar Pradesh (13.8%) and Madhya Pradesh (12.9%). The 5-14 year age group had the highest proportion of deaths in Bihar and Jharkhand (2.6%). Chart 82 gives pictorial distribution of deaths by broad age-group in India and bigger States/UTs. The percentage distribution of deaths to total deaths, by residence, sex and age-group at the National level and for the bigger States/UTs are given in Table 10.

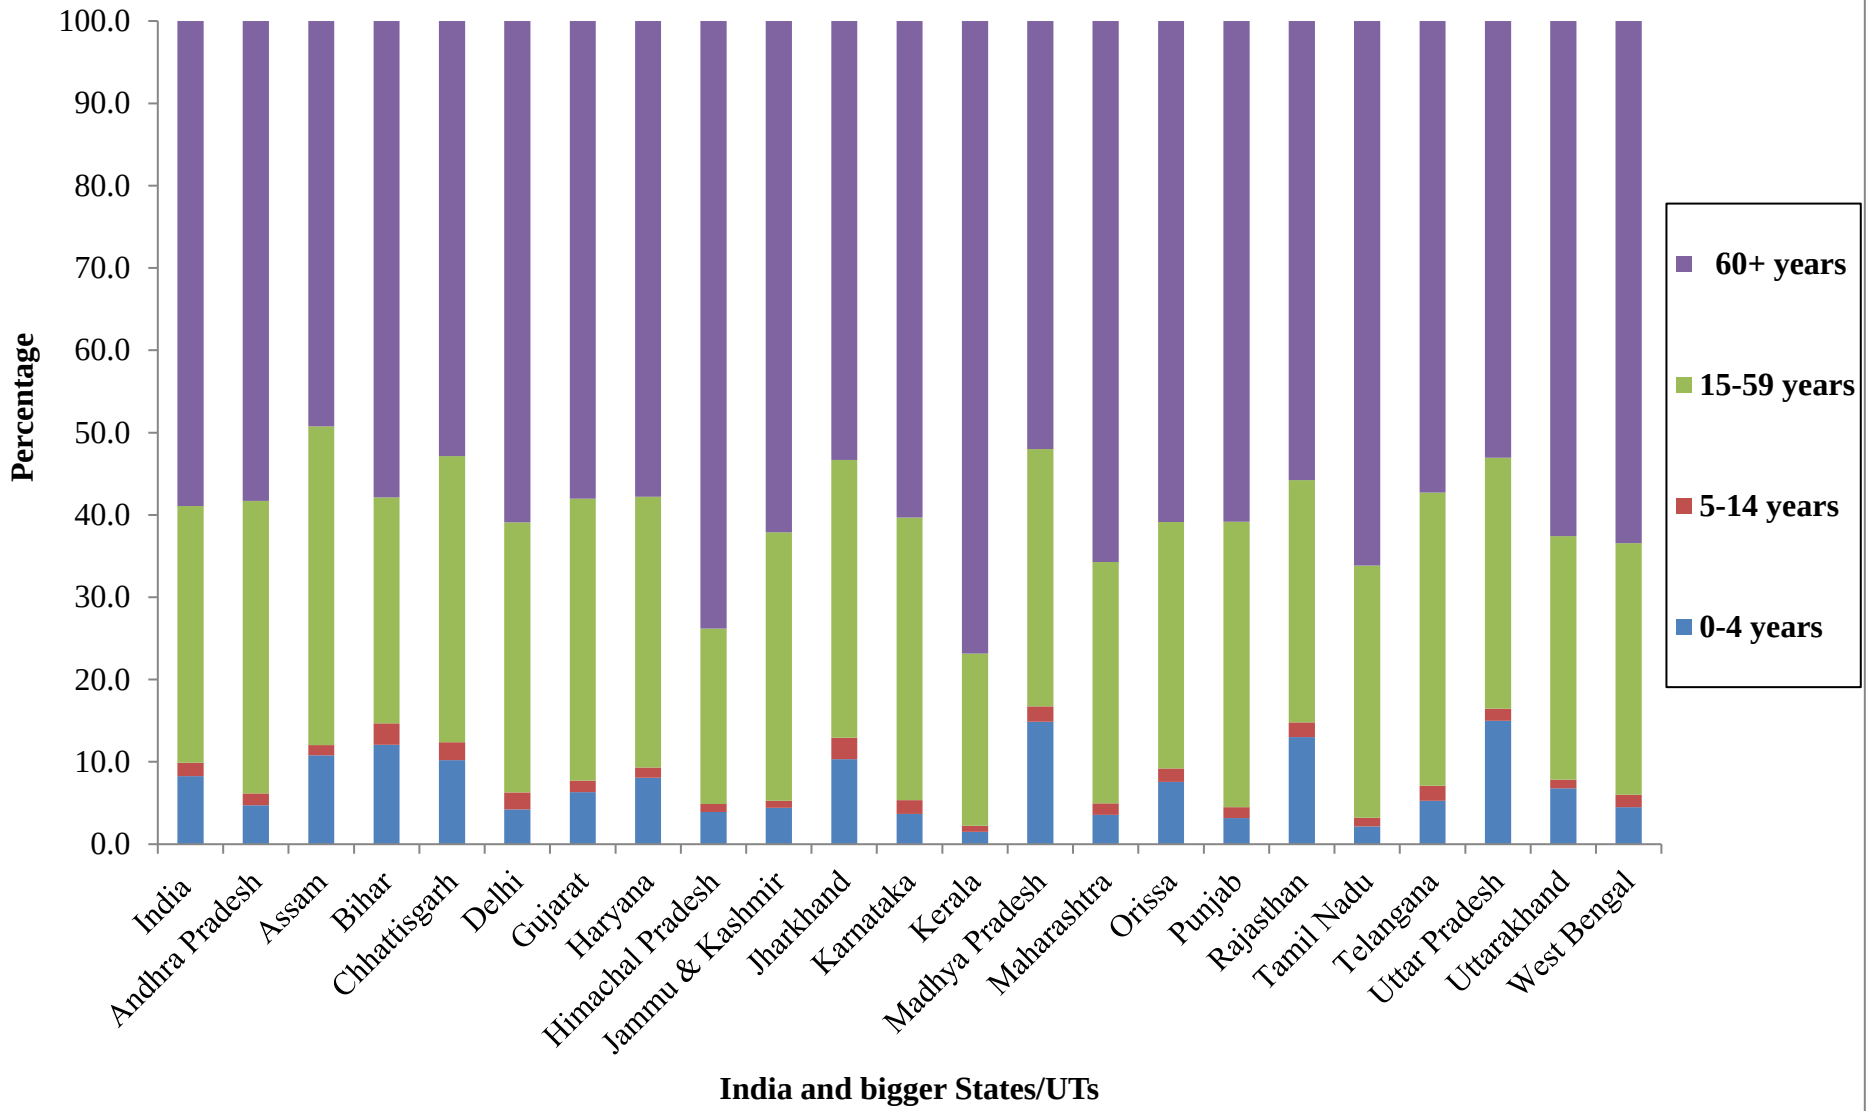

Statement 44

Percentage distribution of deaths by broad age groups, India and bigger States/UTs, 2022

West Bengal	4.0	0.5	4.5	1.5	30.6	63.4

Note: Total may not add up to 100 due to rounding off.

Chart 82: Distribution of deaths by broad age groups, India and bigger States/UTs, 2022

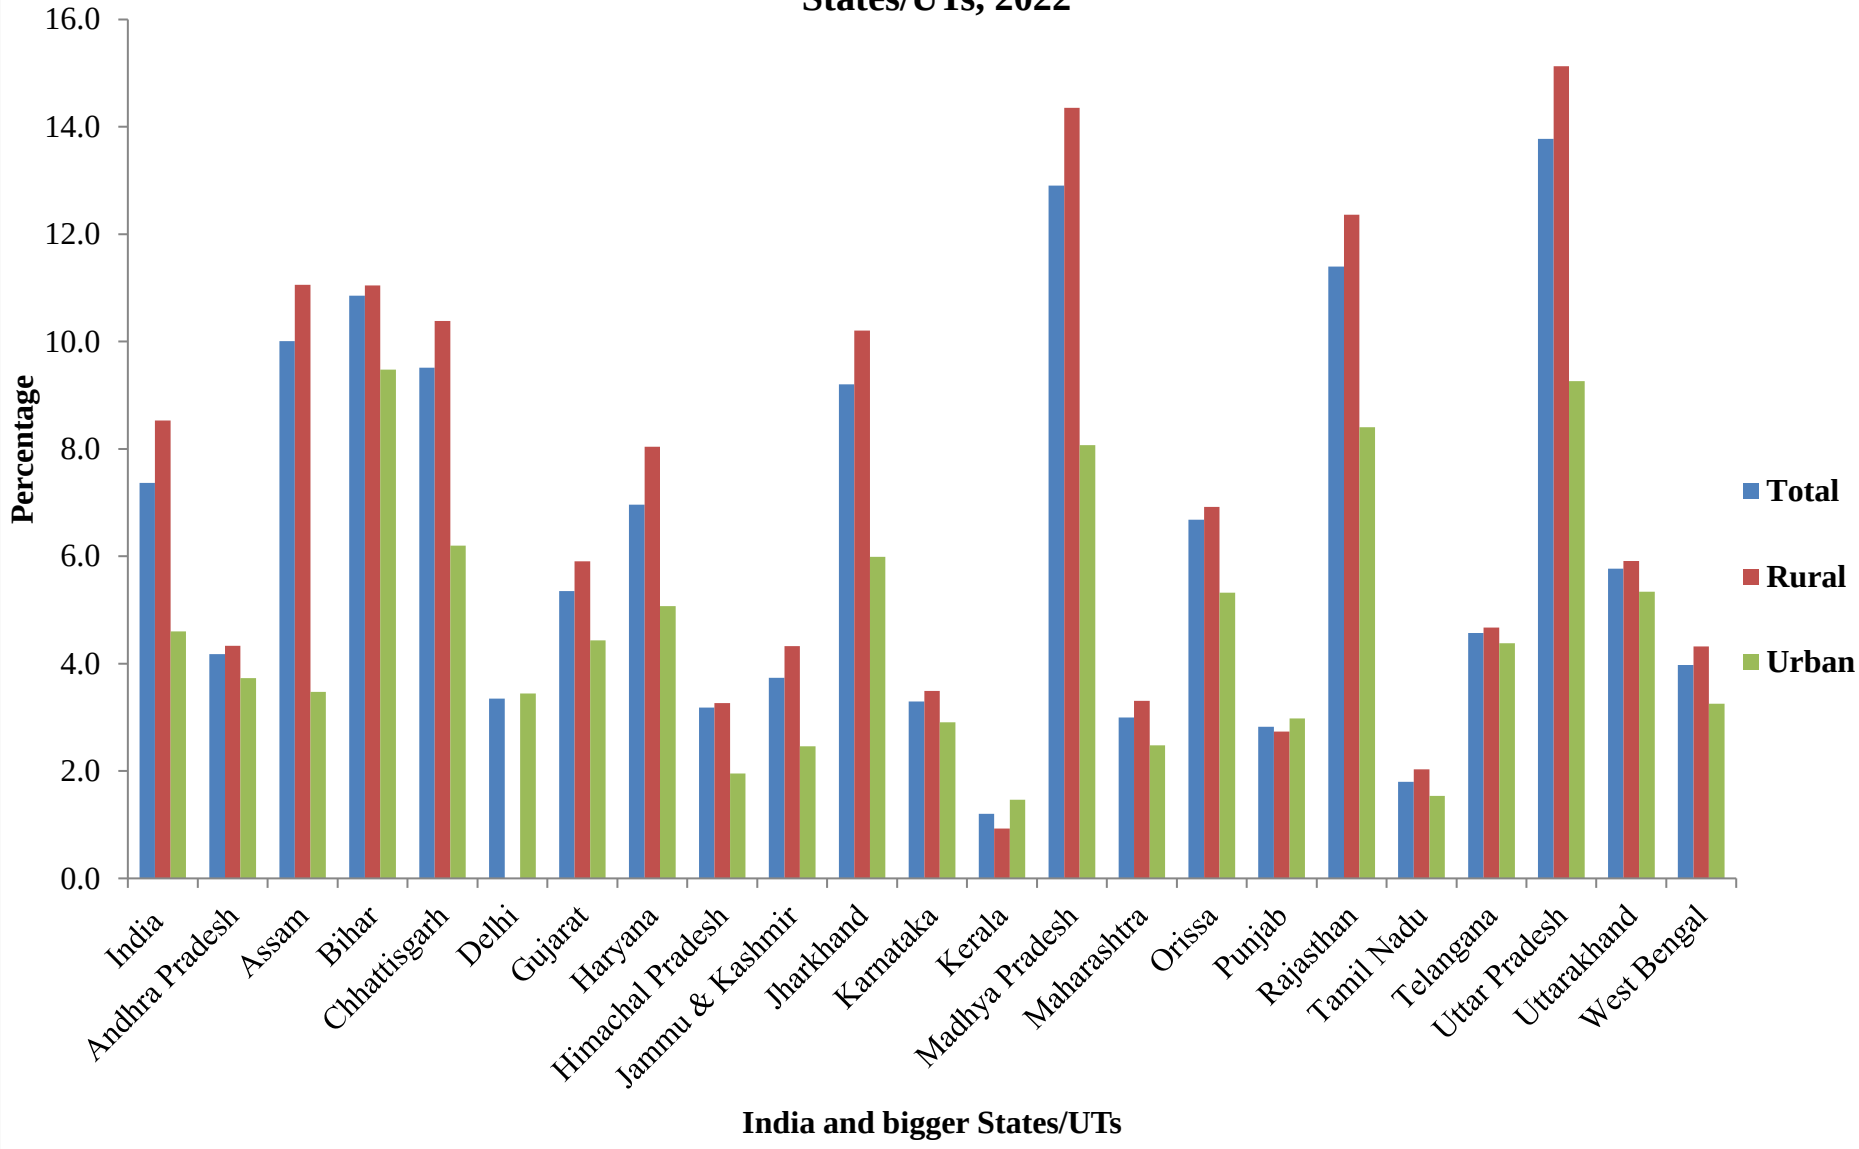

4.10 The percentage share of infant deaths to total deaths by residence for 2022 is shown below in Statement 45 for India and bigger States/UTs. The data shows that in India, 7.4% of deaths were in the 'less than 1 year' age group while 8.5% of rural deaths and 4.6% urban deaths are of Infants. The percentage varies across different States/UTs, with higher percentages of infant deaths in rural areas compared to urban areas in most cases. The percentage of infant deaths varies across different States/UTs, with some States having much higher rates of Infant Mortality than others. For example, Uttar Pradesh has the highest percentage of infant deaths (13.8%) while Kerala has the lowest (1.2%). However, the higher percentage of infant deaths in rural areas compared to urban areas is consistent across most States/UTs, indicating that this is a nationwide trend. Chart 83 provides the pictorial representation of the percentage of Infants deaths to total deaths by Residence for India and bigger States/UTs.

Statement 45

Chart 83: Percentage of Infant Deaths to total deaths by residence, India & Bigger States/UTs, 2022

Infant Mortality Rate:

4.11 Statement 46 given below presents Infant Mortality Rate (IMR) by sex and residence for the year 2022 for India and States/UTs. The IMR varies across different States/UTs in India, ranging from 3 in Manipur to 40 in Madhya Pradesh. In most cases, the IMR is higher in rural areas compared to urban areas. Assam had the highest difference in IMR between rural (34) and urban areas (15). There was also the discernible difference in the IMR between Males and Females in some of the States/UTs. Himachal Pradesh had the highest difference in IMR between males and females, with a rate of 20 for males and 13 for females. Lakshadweep had the highest IMR among the smaller UTs with a rate of 14, and Meghalaya had the highest IMR among the smaller States with a rate of 30. Chart 84-86 below represents the IMR by Sex for Total, Rural and Urban. Chart 87 presents the distribution of bigger States/UTs by Rural and Urban IMR.

Statement 46

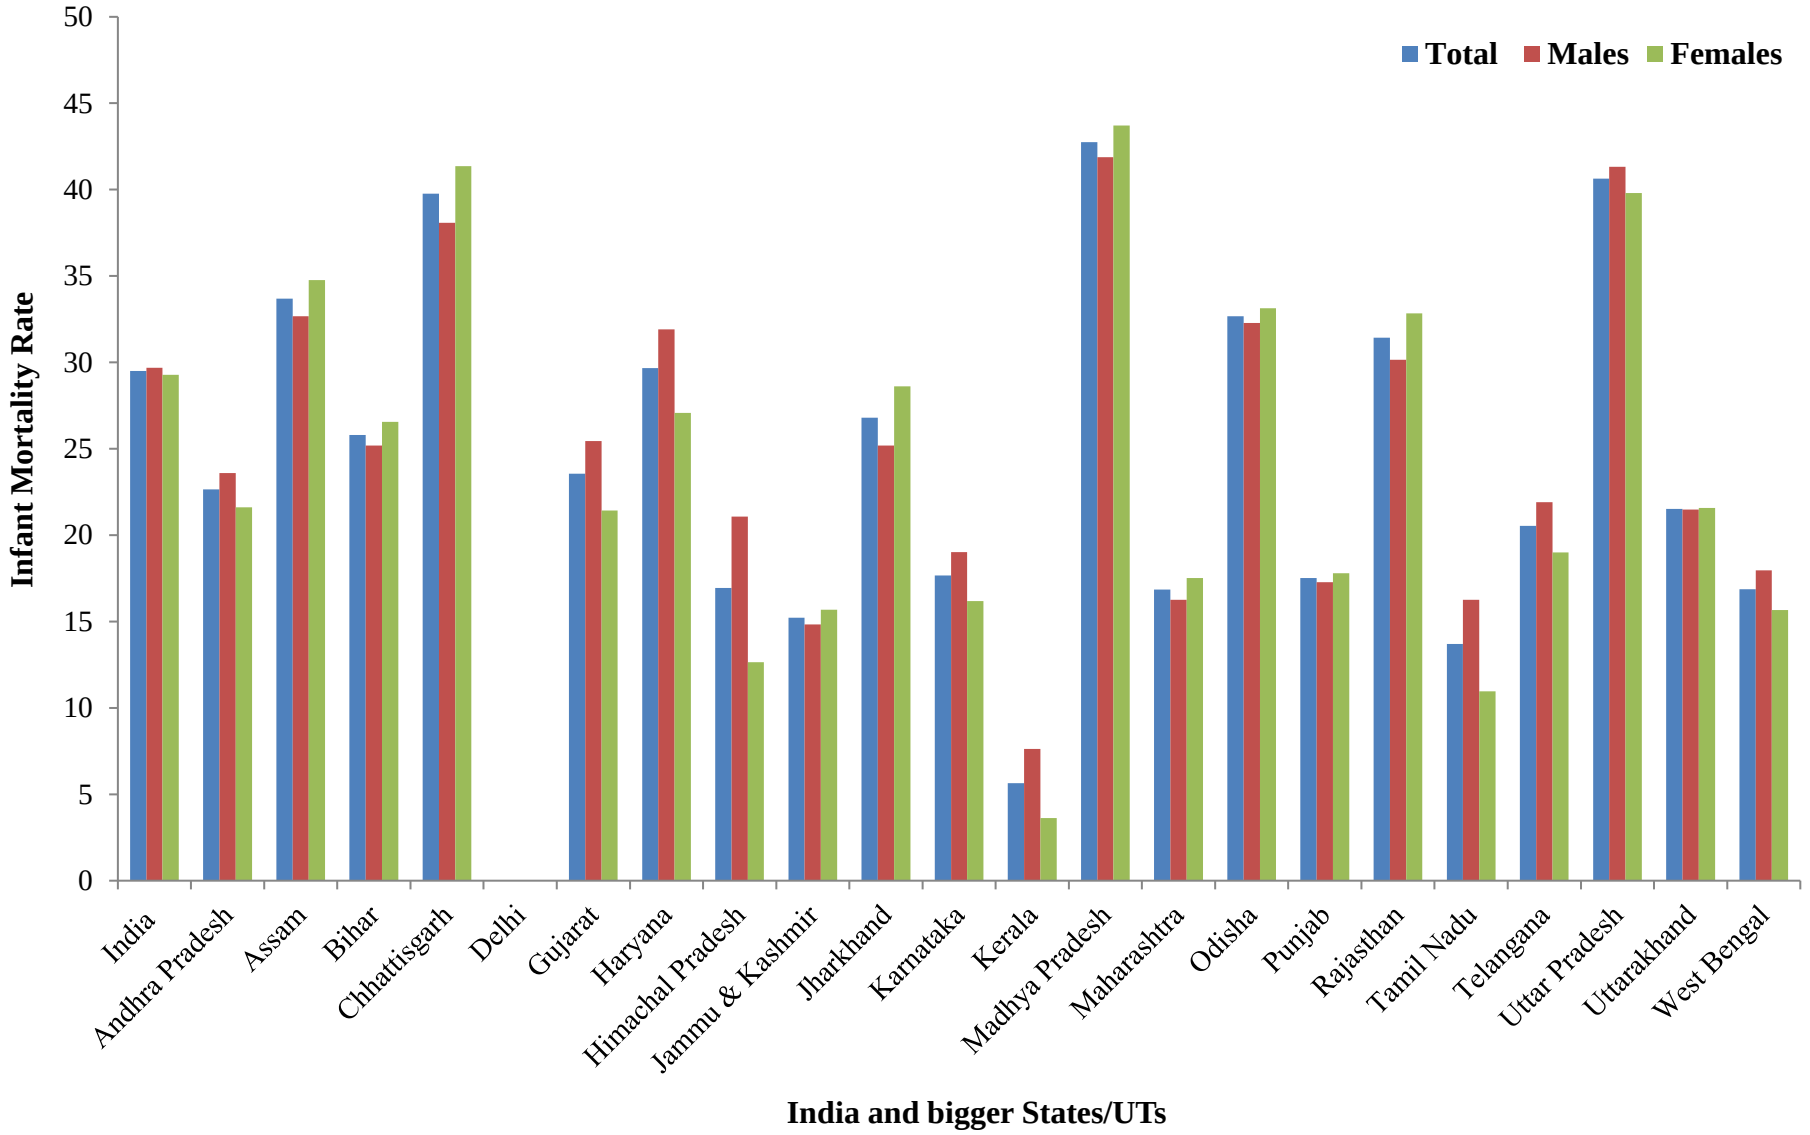

Chart 86: Infant Mortality Rates by sex, India and bigger States/UTs, 2022-URBAN

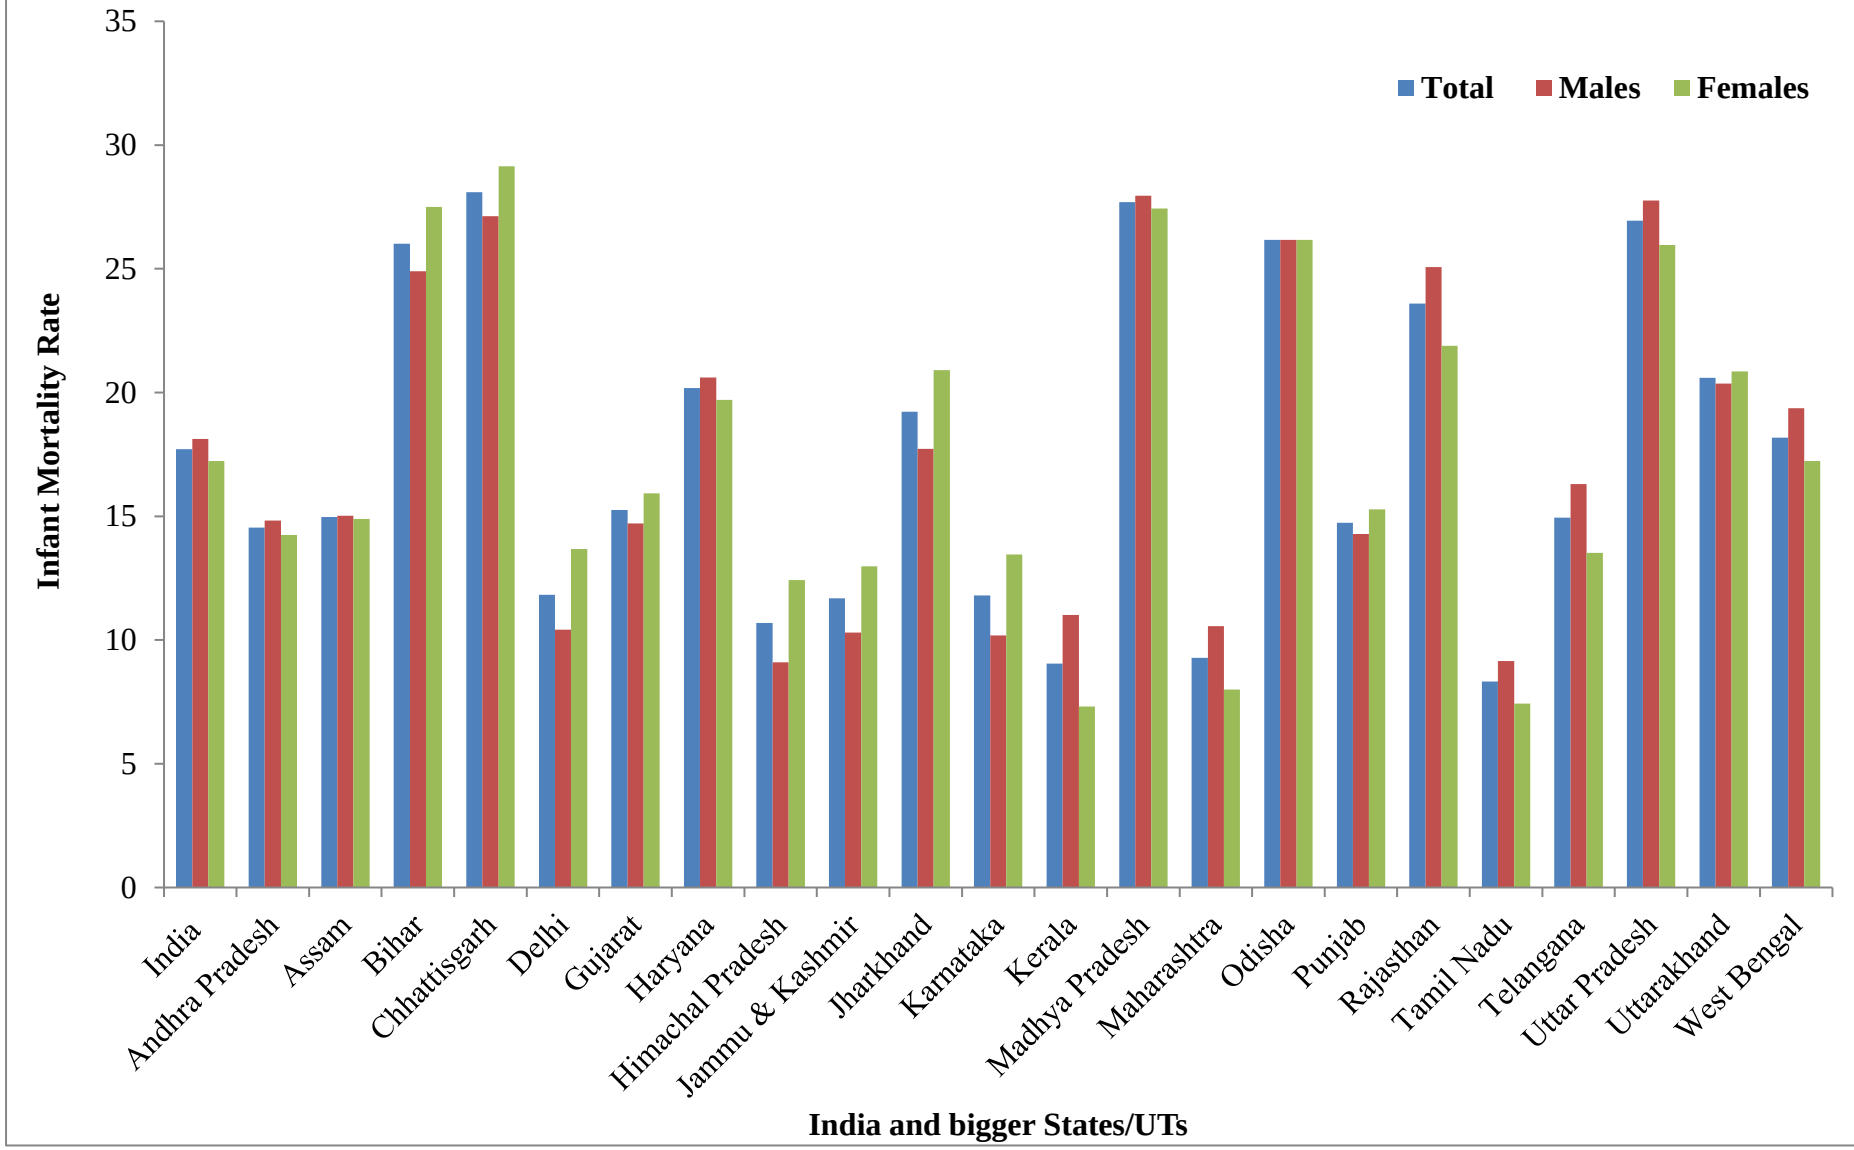

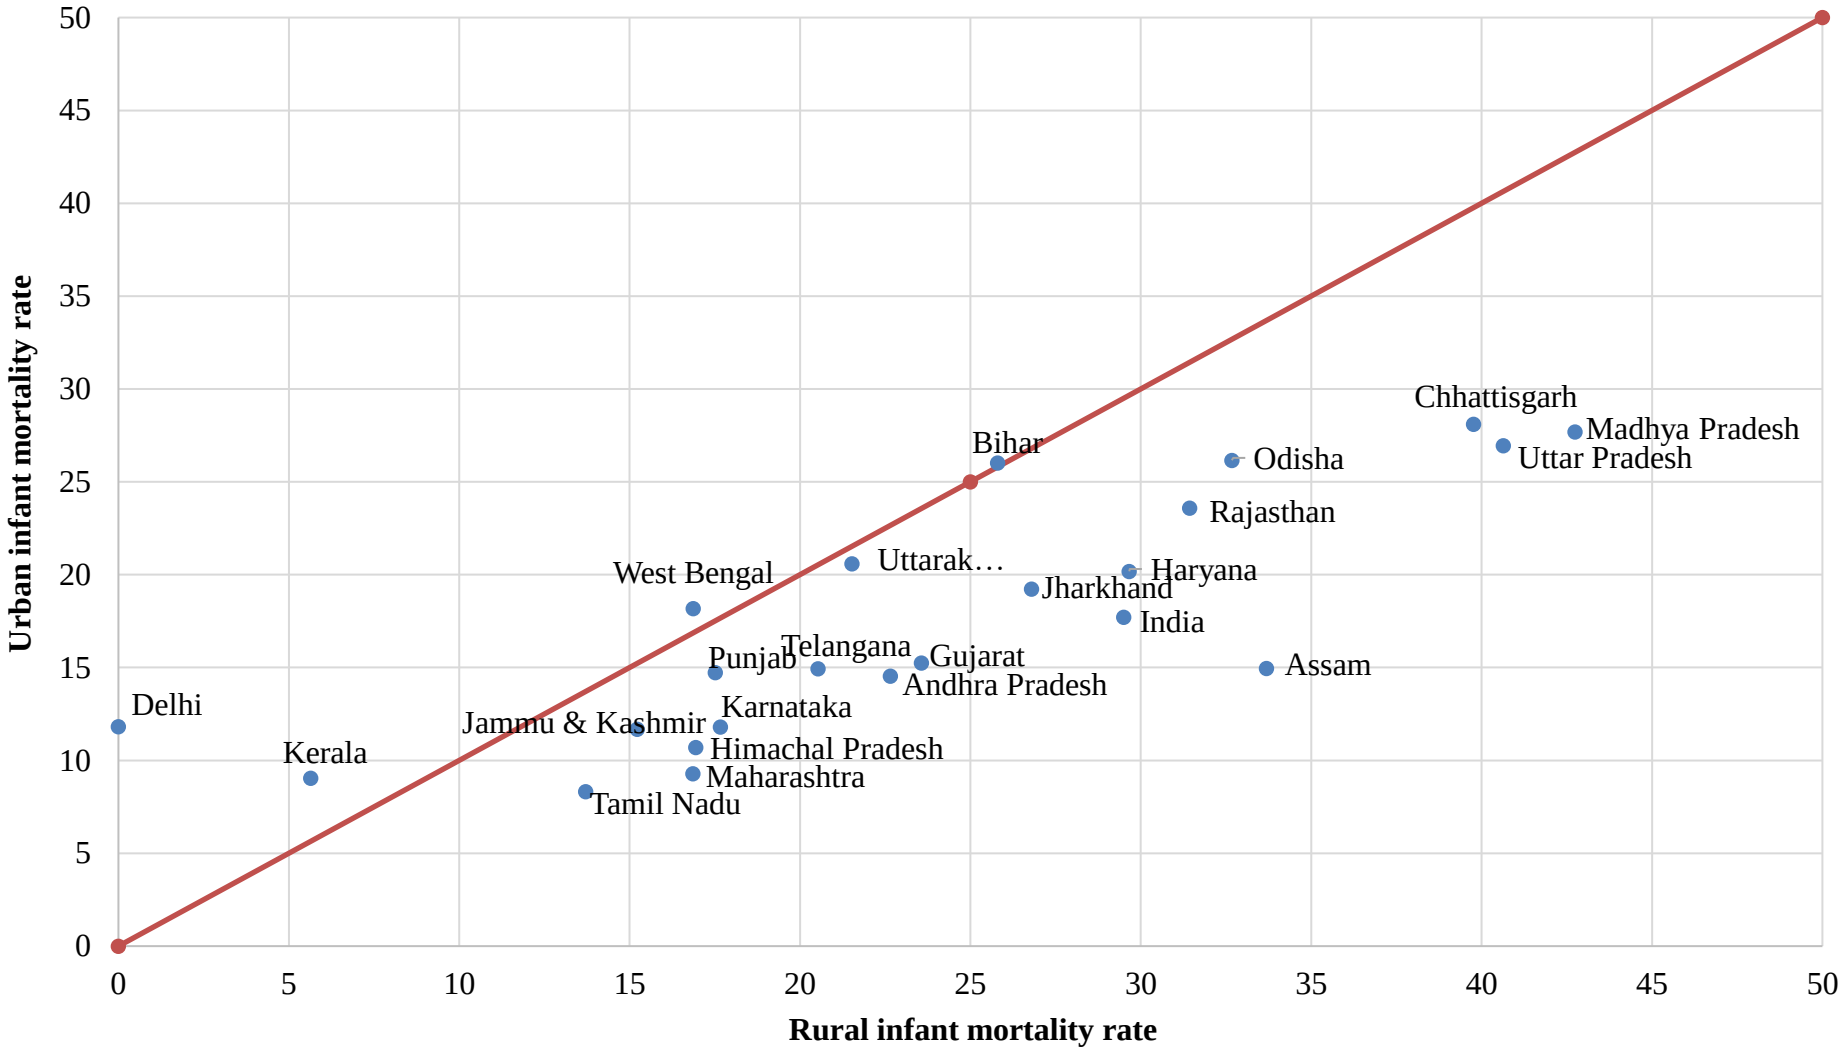

Chart 87: Distribution of bigger States/UTs by Infant Mortality Rate for Rural and Urban areas, 2022

4.12 The percentage change in the average level of Infant Mortality between 2010-12 and 2020-22 in India and the bigger States/Union Territories is given below in Statement 47. The data reveals that the overall Infant Mortality Rate in India has decreased by 39.1% from 44.5 in 2010-12 to 27.1 in 2020-22. The rural Infant Mortality Rate has decreased by 37.7%, while the urban Infant Mortality Rate has decreased by 37.9%. Among the bigger States/UTs, the highest decline in percentage change for Infant Mortality Rate was observed in Jammu & Kashmir, which is 62.4%. Chhattisgarh had the lowest decline in the percentage for Infant Mortality Rate which is 21.8%. Madhya Pradesh had the highest Infant Mortality Rate in both periods and has shown a decrease of 30.2%. Chart 88 to 90 represents the Infant Mortality Rate between 2010-12 & 2020-22 and the percent change by residence viz, Total, Rural and Urban for India and bigger States/UTs.

Statement 47

Neo-natal Mortality Rate:

4.13 Statement 48 given below presents the Neo-natal (less than 29 days) Mortality Rate and the percentage of Neo-Natal deaths to infant deaths for the year 2022 both for India and the bigger States/UTs. India's overall Neo-Natal Mortality Rate was 19 deaths per 1,000 live births in 2022, with a higher rate in rural areas (21deaths per 1,000 live births) than in urban areas (13 deaths per 1,000 live births). The percentage of Neo-Natal deaths to infant deaths was 72.4% indicating that a significant proportion of infant deaths occurred within the first 28 days of life. Among the bigger States/UTs, Kerala had the lowest Neo-Natal Mortality Rate of 5 deaths per 1,000 live births, while Madhya Pradesh had the highest rate of 29 deaths per 1,000 live births. West Bengal had the highest percentage of Neo-natal deaths to infant deaths at 79.5%. Delhi had the lowest percentage of Neo-natal deaths to infant deaths at 67.8%. Chart 91 to 93 represents the Neo-Natal Mortality Rates and percentage share of Neo-Natal deaths to infant deaths for India and bigger States/UTs by place of residence viz, Total, Rural and Urban.

Statement 48

Early Neo-natal Mortality Rate:

4.14 Early Neo-natal Mortality Rate, i.e. number of infant deaths less than seven days of life per thousand live births, forms an important component of Infant Mortality Rate and more specifically of the Neo-natal Mortality Rate. Statement 49 given below presents the Early Neo-natal Mortality Rate along with the percentage of Early Neo-natal deaths to the total infant deaths for the year 2022. The Early Neo-Natal Mortality Rate in India was 14 in 2022, with higher rates in rural areas (15) than urban areas (9). The percentage share of Early Neo-natal deaths to infant deaths in India is 51.7, with a slightly higher rate in urban areas (53.3) than in rural areas (51.3). Among the bigger States and Union Territories, Kerala had the lowest Early Neo-Natal Mortality Rate of 4, while Chhattisgarh and Madhya Pradesh had the highest rate of 21. Punjab had the lowest percentage share of early neo-natal deaths to infant deaths at 46.8, while Andhra Pradesh had the highest percentage at 55.8. Chart 94 to 96 shows the Early Neo-Natal Mortality Rates and percentage share of Early Neo-Natal deaths to infant deaths for India and bigger States/UTs by place of residence viz, Total, Rural and Urban.

Peri-Natal Mortality Rate and Still Birth Rate

4.15 Statement 50 given below presents the Peri-Natal Mortality Rate and Still Birth Rate for the year 2022 by Residence for India and bigger States/UTs. The Total Peri-Natal Mortality Rate in India was 19 in 2022, with a Still Birth Rate of 5. In terms of residence, the rural Peri-Natal Mortality Rate was higher than the urban rate, with a difference of 8. The state of Chhattisgarh had the highest Peri-Natal Mortality Rate of 32, and the highest Still-Birth Rate of 15 in Odisha. On the other hand, Telangana had the lowest still birth rate of 2 and Delhi had the lowest Peri-Natal Mortality Rate of 8. Chart 97 and 98 represents Peri-Natal Mortality Rate and Still Birth Rate for India and bigger States/UTs by residence respectively.

Chart 97: Perinatal Mortality Rates, India & bigger States/UTs, 2022

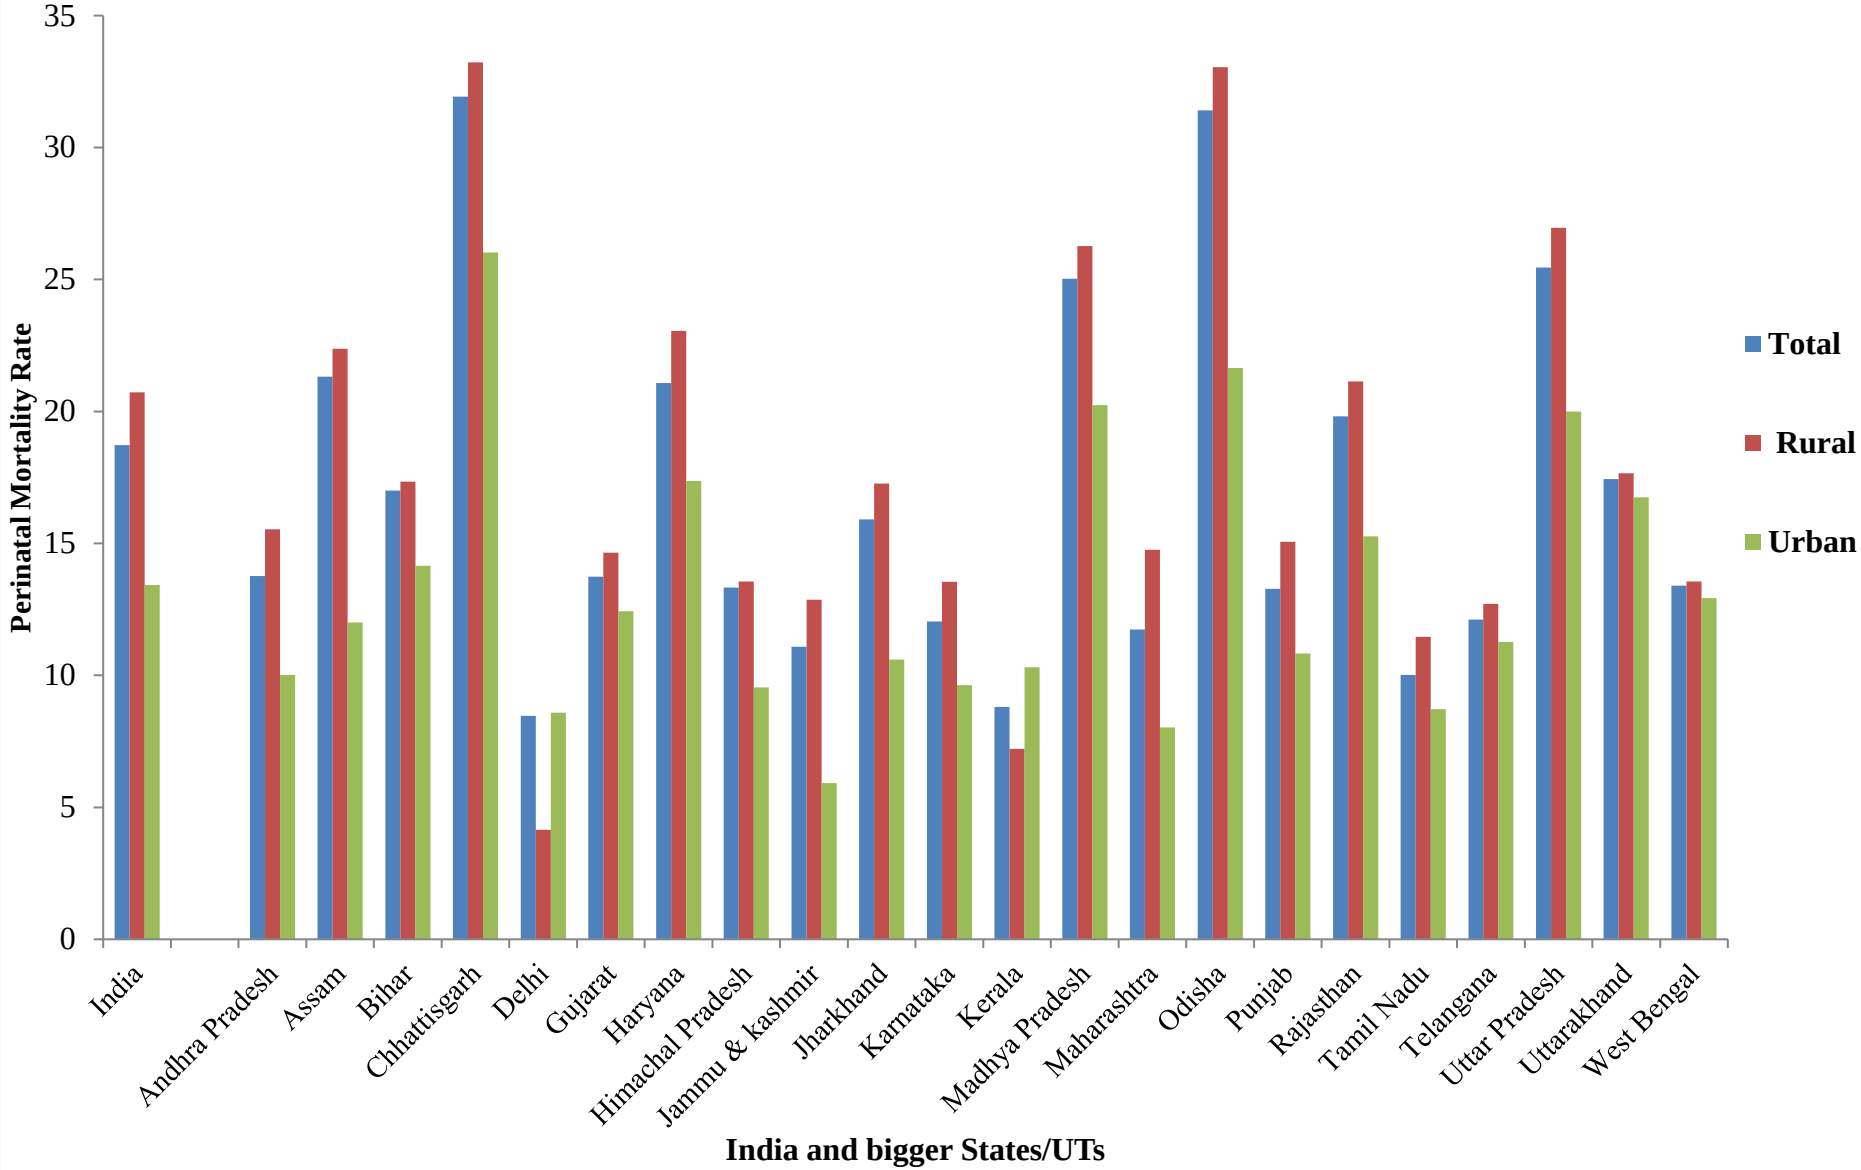

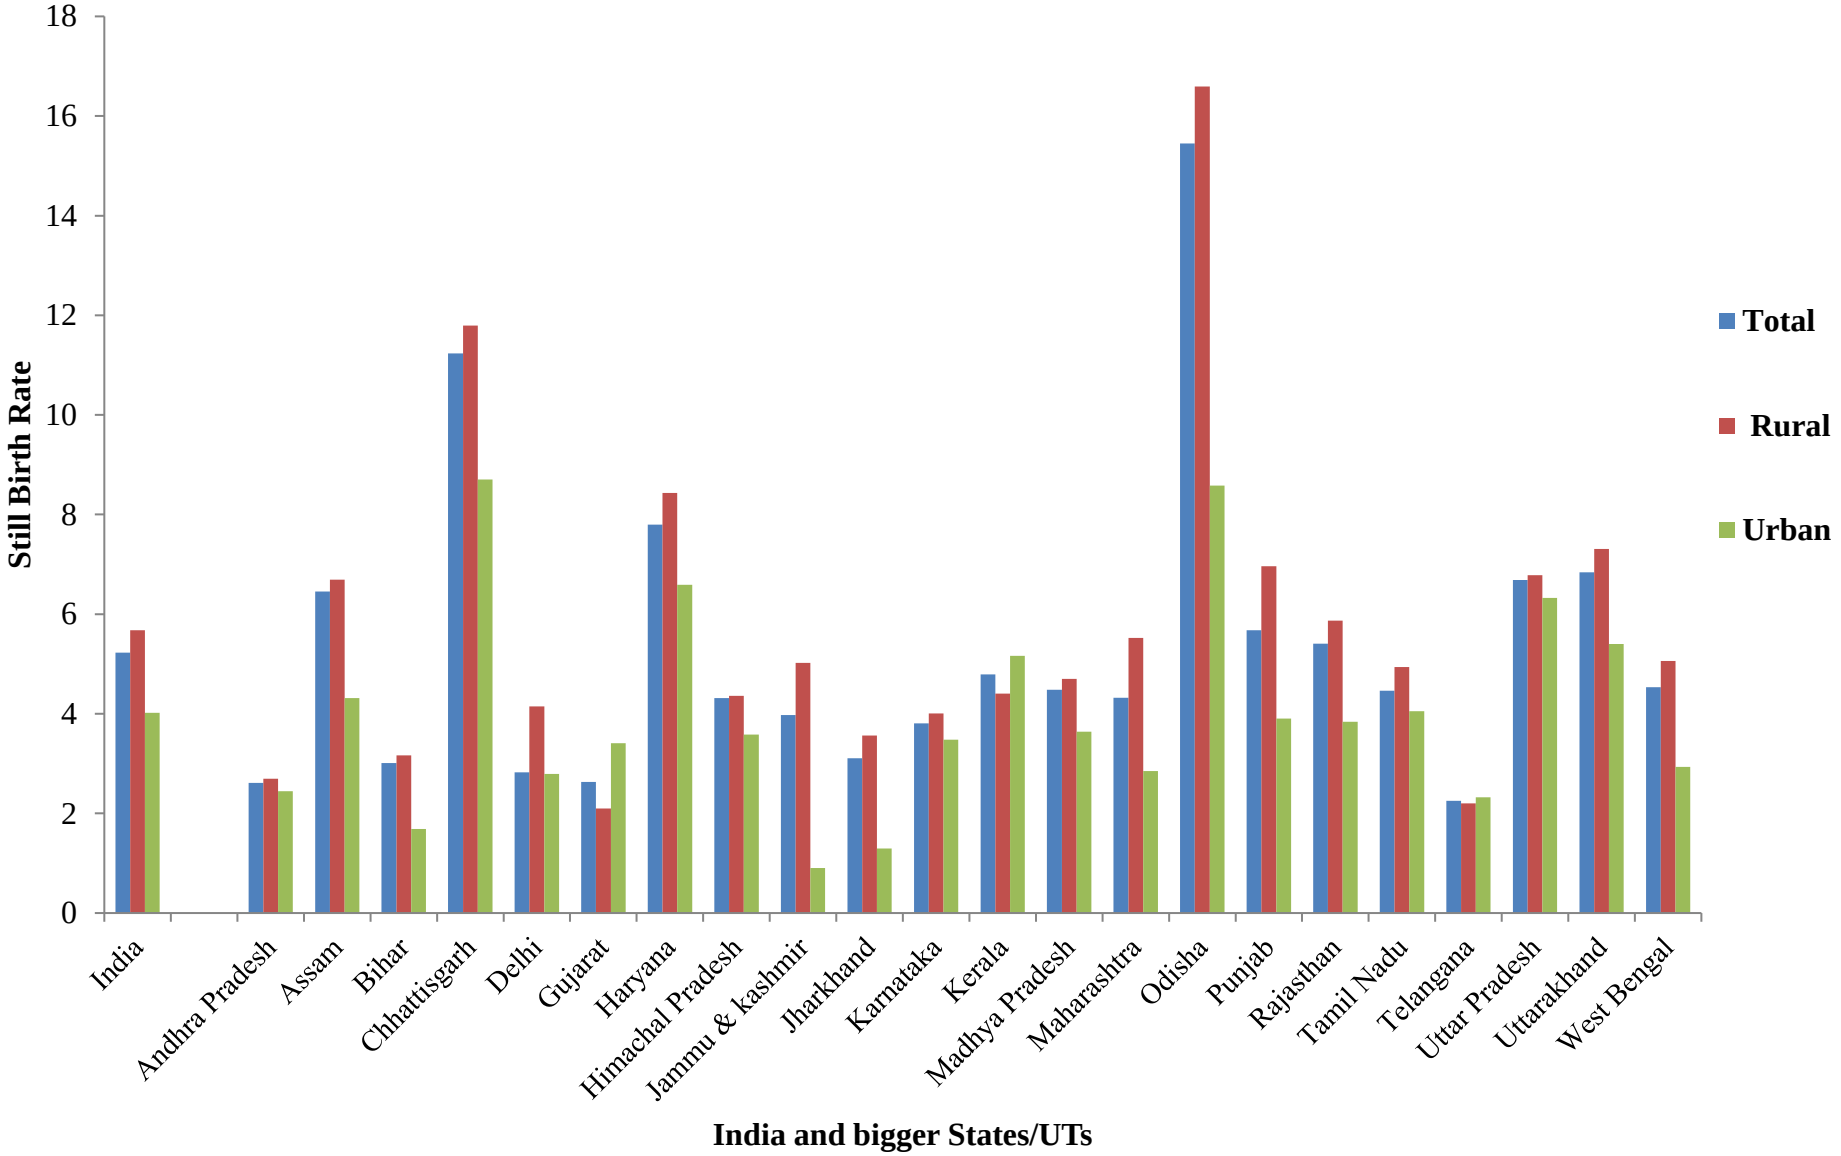

Chart 98: Still Birth Rates , India & bigger States/UTs, 2022

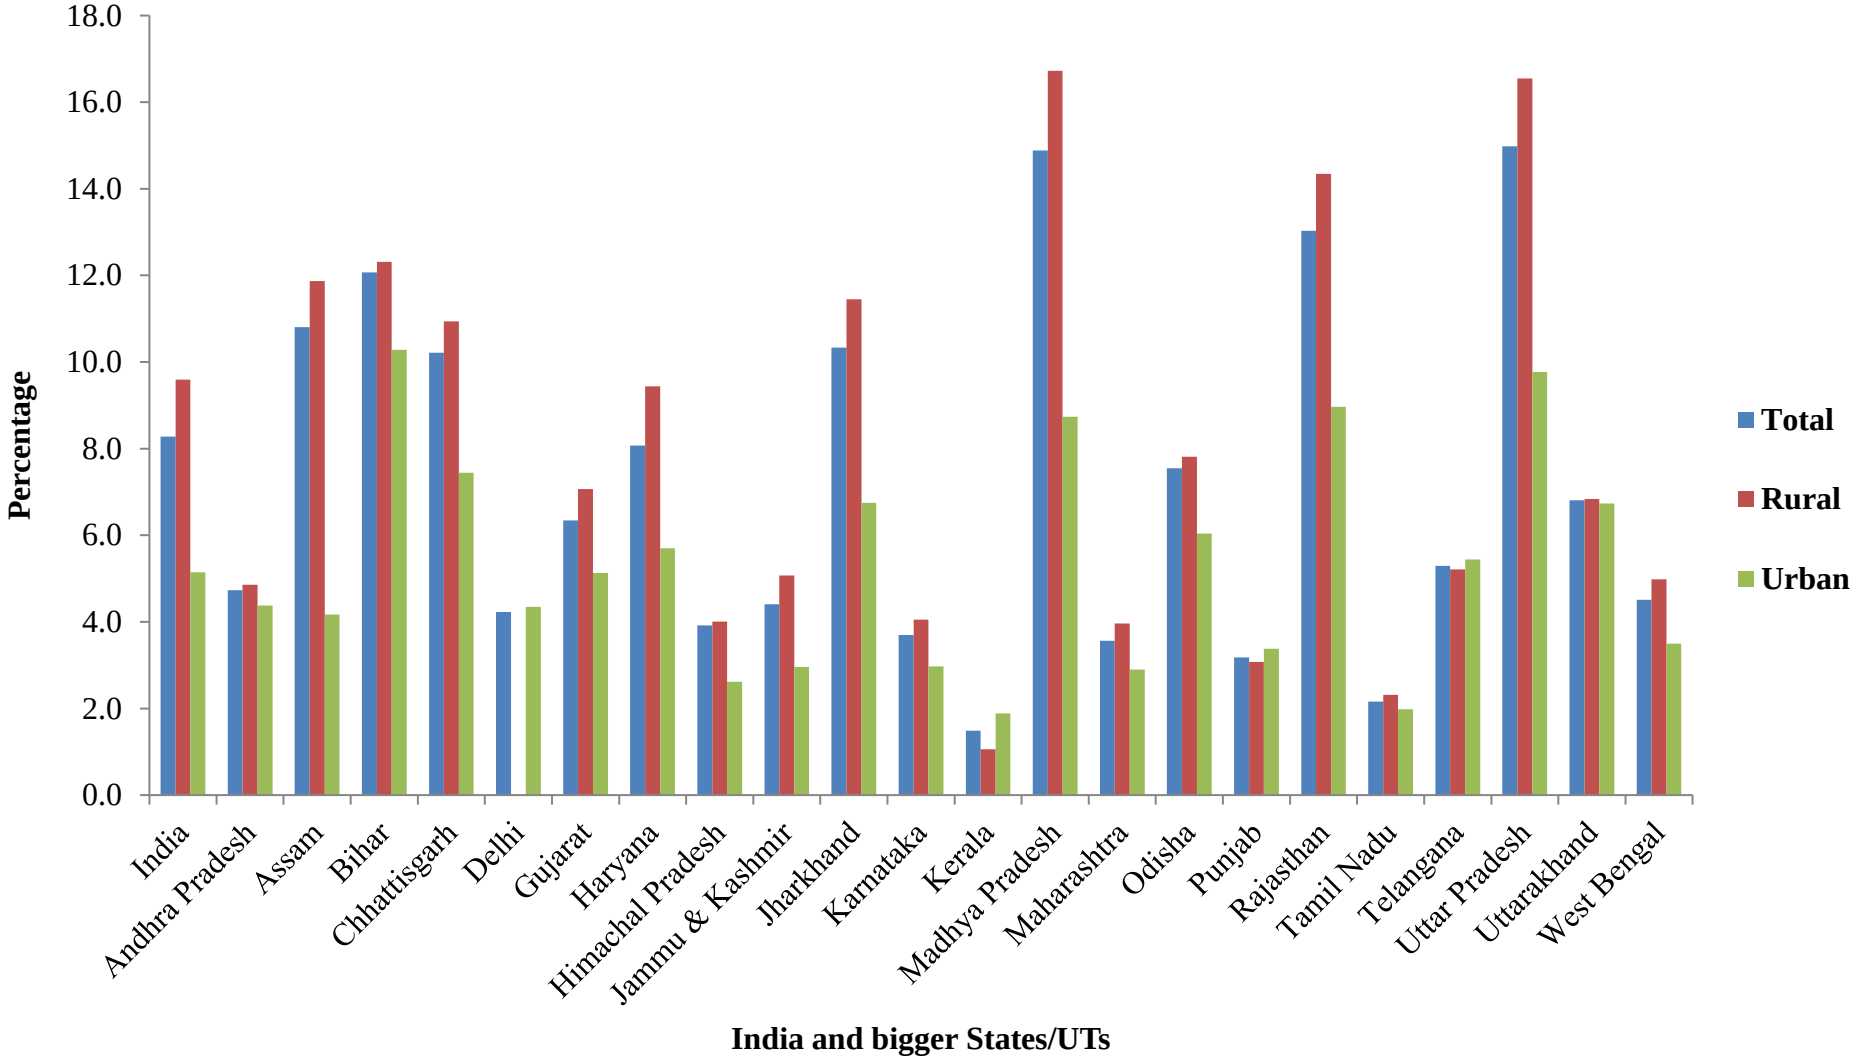

4.16 Percentage share of deaths to children below age five to total deaths by residence for India and bigger States/UTs is shown below in Statement 51. The National average of percentage of deaths in the age group 0-4 years to total deaths in India was 8.3% in 2022, with a higher proportion in rural areas (9.6%) compared to urban areas (5.1%). Among the States and UTs, Uttar Pradesh had the highest percentage (15.0%) of deaths in the age group 0-4 years to total deaths, followed by Madhya Pradesh (14.9%) and Rajasthan (13.0%). Kerala had the lowest percentage (1.5%) of such deaths followed by Tamil Nadu (2.2%). In general, the percentage of such deaths is higher in rural areas than in urban areas across all States and UTs, with some exceptions like Delhi, Kerala, Punjab and Telangana where the proportion is higher in urban areas. Chart 99 shows the Percentage of deaths in the age group 0-4 years to total deaths for India and bigger States/UTs.

Chart 99: Pecentage of Deaths in the age group 0-4 years to total deaths, India and bigger States/UTs, 2022

Death Rate for Children aged 0-4 years:

4.17 The Death Rates for children below age 5 by residence are given below in Statement 52 separately for males and females for the year 2022. While the total death rate for India was 7.0 in 2022, the male death rate was 7.1 and the female death rate was 6.8. The death rate in rural areas was however much higher at 7.9 than that of urban areas at 4.6. Among the bigger States/UTs, Madhya Pradesh had the highest total death rate for children below 5 years of age at 11.4, with the male death rate at 11.4 and the female death rate at 11.4. Kerala had the lowest total death rate at 1.8, with the male death rate at 2.2 and the female death rate at 1.5. Chart 100 to 102 shows Death Rate for children age 0-4 years by Sex for India and bigger States/UTs 2022 by place of residence viz, Total, Rural and Urban respectively.

Under-5 Mortality Rate:

4.18 The Under-Five Mortality Rates by residence are given below in Statement 53 separately for males and females for the year 2022. The U5MR indicates the probability of a child dying before their fifth birthday, expressed as the number of deaths per 1,000 live births. For India as a whole, the U5MR was 30 in 2022, which means that out of every 1,000 live births, 30 children died before reaching the age of five. The U5MR is higher in rural areas (34) compared to urban areas (20). Among the bigger States/UTs, the U5MR ranges from 9 in Kerala to 47 in Madhya Pradesh for the year 2022. Kerala (9) had the lowest U5MR, followed by Tamil Nadu (13) and Delhi (15). Madhya Pradesh (47) had the highest U5MR, followed by Uttar Pradesh (42) and Chhattisgarh (41). The U5MR is generally higher in rural areas compared to urban areas for most States/UTs. Chart 103 to 105 represents Under-Five Mortality Rates (U5MR) by Sex for India & bigger States/UTs by place of residence viz, Total, Rural and Urban respectively.

Survival to Age-5:

4.19 Survival to Age-5 or the Probability of Survival to Age-5 is defined as the probability of child born during the specified year will survive till age 5, subject to current Age-Specific Mortality Rates. Survival to Age 5 or Probability of Survival to age 5 is calculated as the complement of the Under-5 Mortality Rate. Probability of Survival to Age-5 by sex and residence for the year 2022 is given in statement 54 for India and bigger States/UTs. Probability of Survival to Age-5 was estimated as 0.970 for the Country and both Male and Female during 2022. The Probability of Survival to Age 5 was estimated as 0.966 for Rural areas and 0.980 for Urban Areas during 2022. The probability of Survival to Age-5 varies from 0.953 in Madhya Pradesh to 0.991 in Kerala.

Statement 54

Adult Survival Rate:

4.22 Adult Survival Rate is the probability of survival from age 15 to age 60, based on estimated mortality rates over this age range. The adult Survival Rate is calculated as a complement to the probability of dying between the age group 15-59. The statement 57 below gives the Adult Survival Rates by Sex and Residence for India and bigger States/UTs of the Country. The Adult Survival Rate for Country was 0.860 in 2022 ranging from 0.792 in Chhattisgarh to 0.906 in Delhi. The Adult Survival Rate for male and female was 0.826 and 0.895 respectively. It was 0.850 for rural and 0.878 for urban areas of the Country during 2022.

Medical Attention before Death:

4.24 The type of medical attention received before death is also collected in the SRS. In the new samples from 2004 onwards, the options on types of medical attention received before death have been modified to capture the deaths occurred specifically at private hospital/nursing homes. The options include 'Government Hospital', 'Private Hospital', 'Qualified professional', 'Untrained functionary' and 'others'. The options for the sample based on 1991 sample were 'Institutional'; 'Medical attention other than institution' and 'No medical attention'**.** Statement 59 given below presents the percentage distribution of deaths by type of medical attention received before death for India and bigger States/UTs separately for rural and urban areas for the year 2022. At the National level, 23.3% of deaths occurred in government hospitals, 14.5% occurred in private hospitals, 13.7% were attended by a qualified professional and 48.5% had no medical attention or were attended by an untrained functionary before death in 2022.

4.25 In rural areas, the percentage of deaths that occurred with no medical attention or an untrained functionary was higher at 51.3%, compared to 40.3% in urban areas. The distribution of deaths by type of medical attention received before death varies considerably across the States/UTs. For example, in Delhi, 34.8% of deaths occurred in government hospitals, while only 42.7% had no medical attention or were attended by an untrained functionary before death. In contrast, in Jharkhand, 67.5% of deaths occurred with no medical attention or an untrained functionary, while only 3.8% were attended by a qualified professional.

4.26 In case of rural areas, Untrained functionary & No medical attention received before deaths covers about 51.3% deaths ranging from 29.6% in Kerala to 70.9% in Bihar. While in urban areas, about 40.3% people have not received medical attention or attended by Untrained functionaries ranging from 23.0% in Karnataka to 61.1% in Bihar. Chart 115 to 117 represents distribution of deaths by Type of Medical Attention received before death for India & bigger States/UTs by place of residence viz, Total, Rural and Urban respectively.
